 Mo, yield stress parameters det. 3=6782
 Na, 4.2-195°K 0=1850
 Na, 1.4-77°K 1=12594
 NaCl 3=17762
 NaCl, rel. to dislocation density, bulk density and deformation 4=30786
 Nb, polycrystalline, and microstraining 4=23192
 Ni, cube-texture 4=26521
 Ni, discontinuities, temp. rate, var. 4=20675
 Ni, macroscopic strength inhomogeneity 0=6307
 Ni, 1.4-77°K 1=12594
 Ni, polycrystalline, rel. to flow stress law validity 4=23203
 Ni, strain-ageing meas. 4=13433
 Ni, stress-strain curves, strain-ageing meas. 4=13433
 Ni, in torsional deform., work-hardening data 4=7389
 Ni, yield point rel. to strain ageing 3=13350
 Ni-Cr base-alloy, heat treatment effect 3=18351
 Pb, rel. to deformation resist. 4=28931
 Si, moduli rel. to hydrostatic press., 25.0° and -195.8°K 4=23202
 SiO films, stress anisotropy rel. to prep. 3=11144
 Sn, polycrystalline, diagram, position of jumps 3=3218
 Ta, after plastic deformation 2=23743
 Ta, and dislocation var. with plastic deform., effects of temp., struct. 4=28985
 Te, single crystals 1=20365
 TiC-WC-Co alloys, rel. to structure 3=18184
 U, 1.4-77°K 1=12594
 α-U, tensile, brittle-ductile transition temp., effect of grain shape 4=7463
 W, heat treatment temp. effects 3=23307
 W, Young's modulus rel. to recovery after work hardening 3=11174
 Zn, crit. resolved shear stress, rel. to impurities 2=2318
 Zn, rel. to irradiations 3=18174
 Zn, nonelastic strain recovery 3=8776
 Zn, and recrystallization, polygonization 4=7519
 Zn single crystals 4=28991

Stresses, internal

- alkali halide crystals, reversible plastic-flow stress changes on illumination 4=13392
 alloys, ordering, strengthening mechanisms, dislocation movement 4=22582
 alloys, relaxation stability, binding forces and lattice distortions 2=23744
 anisotropic bodies, due to dislocations 3=5063
 Armco iron, oriented microstresses, X-ray study 4=23213
 axially symmetric, due to penny-shaped cracks 2=6726
 bar, vibrating, probability distribution of extrema 1=1778
 brass, α-, microscopic strain distrib. 3=6799
 α-brass, creep and stress relaxation 1=6463
 carbides, sintered, x-ray meas. 3=25619
 concentrations, dynamic 1=8176
 corundum, annealing boules 1=20324
 corundum crystals, acting perp. to optic axes 0=13543
 crystalline overgrowths, residual strains 3=3278
 crystals, anisotropic defects, stress-induced alignment 2=3914
 crystals, fluctuation of parameters 0=4957
 crystals, formation during growth 4=30815
 crystals, rel. to n.q.r., tensors 3=3206
 crystals, thermal strain 1=17427
 about cut, in elastic body 3=18216
 cylinder, circular, under torsion, stresses around spherical inclusion on axis 0=19020
 cylinder, thermoelastic stresses 2=1095
 cylindrical clad fuel elements, thermal stresses 0=12989
 diamond, rel. to birefringence 4=10213
 diamond, due to crystal distortion during growth 3=25285
 digenite (Cu₂-S), due to crystal distortion during growth 3=25285
 dislocation kinks and jogs, dilatational stress field 2=23188
 dislocation multipoles and strain-hardening 4=25936
 dislocation stress fields due to elastic anisotropy 3=10661

Stresses, internal—contd

dislocation wall, compound tilt, rel. to elastic props. 4=20633
 dislocations, moving, continuous distrib. 3=15492
 due to dislocations, periodic distrib., use for stress field calc. 4=25931
 due to interactions between particles of a solid, calc. 4=17716
 domains, maze-like structure 2=18906
 edge dislocation, surrounding elastic field 4=9958
 around edge dislocations 1=3664
 effect on domain structure 2=741
 effect on elastic stiffness 3=7157
 elastic body, with cylindrical hole at const. temp. 0=6706
 elastic body, with uneven temp. distrib. 0=4970
 elastic inclusions, diffraction contrast theory 4=4643
 elastic layer with varying Young's modulus 2=1090
 elastic stress around linear dislocation 1=17530
 electrolytic coatings 1=20323
 electrolytic coating, meas. of residual stresses 3=15983
 electron diffr. contrast by coherency strains 4=7661
 ellipsoidal inclusion in elastic solid, elastic field outside 0=10625
 elliptical rigid inclusion in elastic solid, theory 0=8125
 ferromagnetic films, rel. to mag. anisotropy 2=12778
 ferromagnetic films, planar stress determ. 2=12680
 field caused by slid crystal at free surface 4=1918
 films, solid, vacuum deposition control 3=13566
 films, study of stresses of second type 1=1451
 films, vac. deposited, meas. probe 3=16142
 friction-induced shear, pressure influence 1=9098
 glass, infinite plate, tempering stresses 2=793
 glass to metal tube seals 0=19006
 glass plate, photoelastic meas. 1=11725
 glass, quenched in liquids 3=15984
 glass, relaxation during stabilization 4=4679
 glass, relaxation, effect in viscosity meas. 4=4681
 glass, spiral defects at torque stresses 2=2418
 graphite, during thermal cycling 3=23308
 h.c.p. crystals, subsidiary glide systems, stress distrib. 4=1919
 impacted notched beams, dynamic stress conditions 1=11720
 inclusion, elliptic, in orthotropic medium 4=18131
 laminated inf. elastic media, applic. to magnetostriction 0=8046
 materials during ultrasonic machining 4=2756
 measurement using X-ray back-reflection technique 2=4318
 measurement using X-rays, error sources 4=23098
 mechanical resonance dispersion, plastic flow in crystalline solids 0=18252
 mechanism, in soft mechanical testing machines 1=14892
 metal foils, electron diffr. contrast microscopy 3=20702
 metals, b.c.c., yield and flow stress, temp. effect 0=21109
 metals, effect of cyclic strain 3=13345
 metals, at initial stage of plastic deformation 1=14875
 metals, non-uniformity, effect on slow fracture 1=14912
 metals, due to plastic deformation 0=10263
 metals and plastics, creep and rupture, parameters 3=8761
 metals, relaxation stability, binding forces and lattice distortions 2=23744
 moon, theory rel. to surface obs. 2=4739
 noble metals, stack fault tetrahedra, effects 3=12994
 nonlinear theory for dislocations 2=14875
 nonuniform stress fields, rel. to linear dislocations 3=795
 Peierls stress, rel. to slowly moving dislocations, velocity 1=19774
 Permalloy films, isotropic stress meas. 2=12679
 piezoelectric rotating disk 2=16795
 planet, gravitating, non-hydrostatic stresses 1=18037
 plastic flow, crystals, ionic, effect of metal impurity distrib., heat treatment 4=4486
 plate, thick, with rigidity varying exponentially with depth, torsional stresses 0=19021
 polycrystalline aggregate, distorted, strain determ. from X-ray line broadening 4=26685
 polycrystalline materials, microstructural strains due to thermal anisotropy 2=2088
 polymer solutions, in steady flow 0=3497
 polyvinyl chloride, appearance of surface cracks 0=10273
 porcelain, arising during cooling 4=26699

Stresses, internal—contd

with precipitates growth, dislocation formation 0=20825
 quartz crystals, vibrating internal displacements, by X-ray diffr. 3=15982
 reactor fuel elements, thermoelastic dynamics 2=8049
 reactor fuel rod in elastic-plastic deformation 1=1310
 relaxation, in crystallization of very viscous liquids 1=11535
 relaxation, in crystallization of very viscous liquids 1=14962
 residual, coherence length, calc. from X-ray interf. data 4=30749
 residual, in electrodeposited coatings, X-ray determ. 4=23181
 rocks, in wave attenuation, analysis 3=14254
 rocksalt, plastically deformed, residual stress distrib. 1=12396
 rubber, stresses at cracks 1=6479
 screw dislocations in cylind. specimens, theory 4=6844
 semi-infinite solid, plastically deformed by circular punch 1=6459
 shaft with transverse hole, bending stresses 1=11721
 shear, meas. at high pressure 4=17717
 silicide layers on Mo, cracks due to stresses 4=7704
 single crystals, residual stress distrib., rel. to heat treatment 4=10358
 soda-lime-silica glass torsional, relaxation 4=4680
 solids, cooling processes 2=6296
 solids, strain amplitude of Mc/s u.s. waves 4=26466
 sphalerite, due to crystal distortion during growth 3=25285
 spinodal decomposition, due to 4=7395
 steel, on diffusion of Al, Cr, Ti, B or C, tensile and compressive 4=1952
 steel, hair-line crack formation 3=3241
 steel lattice, residual, on plastic deformation, X-ray diffr. meas. 3=18180
 steel, macrostructure meas. 1=3967
 steel, mild, relation to mag. permeability and hysteresis 3=23301
 steel, notched rods, rel. to creep and fracture 1=12589
 steel, oriented microstresses, X-ray study 4=23213
 steel, plastically deformed, very large stresses 4=23143
 steel, residual stresses, after deformation in yield plateau region 3=20712
 steel, X-ray studies 1=1306
 steels, 0.01-1.25%C, Cr K α X-ray meas., reliability 3=13346
 strain ageing, rel. to impurity precip. at dislocations 2=6339-40
 stress tensor, relaxation, thermodynamic calc. 1=7818
 superconducting films, effect on transition temp. 1=18715
 thermal, in crystallizing ingot 4=115
 thermal, in metallic crystals, cubic symmetry 3=20112
 thermal stresses in crystals 0=17889
 thermal stresses, graphitization in polycrystalline C 1=11202
 thermal stresses, hollow cylinders of finite length 0=14561
 due to thermoelastic strain in elastic solid 3=23809
 III-V cpds., rel. to bonding on A surfaces 3=3219
 total rupture of elastic medium 0=699
 transparent objects, instantaneous or cyclic, meas. method 4=10357
 transverse crack, due to 3=21275
 tubes, elastic-plastic thermal stresses under heat generation 1=20341
 two-phase systems, from transition temp. change 4=23099
 uniform biaxial tensile stress field, prod. of 4=1911
 Vicalloy II, rel. to mag. hardness 3=1139
 X-ray diffraction line shift determination 1=11556
 X-ray meas., interference line analysis 3=20704
 AgCl, at kink bands 2=23762
 Ag and Fe effect on self-diffusion 1=10J12
 Al alloy, plastically deformed, very large stresses 4=23143
 Al, bending stresses at grain boundaries 3=18177
 Al, effect of cyclic strain 3=13345
 Al single crystals, yield stress var. with specimen dia. 4=30762
 Al₂O₃ films on Al, 1500 Å thick 4=23128
 Al-Zn alloys, stress relaxation induced by phase transformations 4=17725
 BaNb₂O₈-PbNb₂O₈ 4=1909
 BaTiO₃ 4=1909

Stresses, internal—contd

- BaTiO₃—CaTiO₃ 4=1909
 BaTiO₃—CaTiO₃—CoCO₃ 4=1909
 Be, asterism in Laue photographs, glide elements 2=4317
 Be bronze, abnormal stress relaxation 4=7413
 CdTe rel. to excitons and band splitting 1=17724
 Co, polycryst., stored energy and dislocations 3=11159
 Cu crystals, flow stress after neutron irradiation 3=20719
 Cu, plastically deformed, very large stresses 4=23143
 Cu, tension strain, rel. to wide stacking faults 2=599
 Cu, yield stress 4=23142
 Cu, yield stress rel. to microstresses 4=23138
 Cu₃Au crystals, strained, frictional stress on dislocations 4=26507
 Cu—Co alloy, coherency strains around precipitates 3=1222
 Cu—Sn alloy, relax., in reverse martensite transition 4=7491
 Fe, films, microstresses 4=26696
 Fe, lattice, residual, on plastic deformation, X-ray diffraction meas. 3=18180
 Fe; plastically deformed, temp. depend. 4=17734
 Fe powder, effect on Fe⁵⁷ n.m.r. resonance 2=2307
 Fe—Al alloy, yield and critical shear stress rel. to quenching 2=6715
 Fe—Si single crystals, crack propagation 3=13379
 GaAs doped with Se, Te, Zn and Cd 4=26045
 Ge, dislocation distribution, photoelastic study 1=20321
 Ge, microhardness meas., indentation microstructure 1=20362
 Ge, microhardness meas., indentation microstructure 2=8737
 Ge, rel. to photoelastic consts. 2=8483
 Ge, screw dislocation, electron states produced 2=14538
 Ge, vacancies, theory 3=22754
 In films, effect on superconduct. transition temp. 1=18715
 InSb, elastic strain energy 3=3219
 KCl crystals, reversible plastic-flow stress changes on illumination 4=13392
 KCl, due to X-rays, rel. to intensity 3=6545
 LiF films, meas. during deposition 3=16142
 LiF, relaxation during annealing 4=23173
 LiF, slip planes, intersecting, surrounding strain fields 4=9972
 Mg, relaxation, dislocation processes 3=23310
 Mg, Cd, flow stress 4=23176
 MgO:Cr, strain effects on fluorescence line 1=9007
 Mo, plastically deformed, temp. depend. 4=17734
 NaCl, growth stresses, generation and removal 0=16366
 Nb, polycrystalline, yield stress 4=23192
 Nb, yield and flow stress meas., 4.2 — 373°K, and thermally activated flow mechanism 4=28970-1
 Ni, drawn, stress in surface layer, X-ray study 1=9089
 Ni and ferromagnetic remanence/saturation mag. ratio, wire, —180 to +100°C 3=23160
 Ni, films, evaporated, single-crystal, effect on magnetic props. 3=13344
 Ni, films, microstresses 4=26696
 Ni, residual, in electrodeposited coatings, X-ray determination 4=23181
 Ni—liquid Pb system, interfacial tensions, effect of temp. and pressure 4=15724
 Ni—Co alloys, rel. to ferromagnetic domain patterns 3=18079
 Ni—Fe films, rel. to magnetization direction 3=20595
 Pb, deformed, analysis by X-ray diffraction 3=20704
 Pb films on substrates with low thermal expansion 4=4669
 Pb_{0.95}Sr_{0.05}(Zr_{0.83}Ti_{0.17})O₃—Ta₂O₅ 4=1909
 Sb films, evaporated 3=20701
 Si, around dislocations, observations 2=6725
 Si bonded wafers, residual thermoelastic stresses 1=5085
 Si, discrete stresses around dislocations 2=23177
 Si, discrete stresses around dislocations 3=6518
 Si iron, slip system critical shear stress 4=23169
 Si, microstrains at B impurities, in dislocation-free crystals 3=15486
 Si, rel. to photoelastic consts. 2=8483
 SiO₂ evap. films, effect of exposure to air 3=1365
 SiO₂ sublimated films, residual stresses 3=11146
 SiO₂, vitreous, due to neutron irradiation 3=4899
 Sn—Te—Al ternary alloys, effect of additives 0=18261
 Sn—Te—Zn ternary alloys, effect of additives 0=18261
 Ta; plastically deformed, temp. depend. 4=17734
 Ta, yield and flow stress meas., 4.2 — 373°K, and thermally activated flow mechanism 4=28970-1

Stresses, internal—contd

- UO₂, due to crystal distortion during growth 3=25285
 V, yield and flow stress meas., 4.2 — 373°K, and thermally activated flow mechanism 4=28970-1
 YFe garnet, strain in crystals, resonance and optical study 1=14865
 Zn, critical resolved shear stress, rel. to impurities 2=23745
- Stroboscopes**
 for electronic circuits, using Hall effect generators 2=2967
 light source, stroboscopic 3=18976
 measurement of small-amplitude mechanical vibrations 2=2803
 ripple tank 1=4231
 stroboscopic photography with linear accelerator 0=6958
 tachometers, for strobe photography 3=3905
 variable phase, with light modulation by u.s. diffraction 0=5181
 velocity meas., bullet, teaching demonstration 3=21286
- Strontium**
 adsorption, atomic, in polycrystalline W 1=20694
 adsorption on W, effect on work function 2=1478
 atom, first excited state, oscillation strength from lifetime 4=6469
 atom, first ¹P₁ state lifetime meas. 4=19968
 atom, h.f.s., splitting of 5s5p³P₁ state 3=24842
 atom, ¹S—¹P excitation, correlation effects calc. 4=9624
 atom, spectrum, resonance lines, oscillator strengths meas. 2=10209
 atomic beams, surface ionization, from W 3=24226
 atoms, principal spectrum, oscillator strengths 2=14200
 atoms, u.v. absorption spectrum 2=14190
 compressed, interatomic separation 0=20721
 crystal structure, above 35 kbar, rel. to Yb 4=4624
 damping capacity, shear modulus of elasticity 3=1216
 deuteron scattering, 11.8 MeV, elastic and inelastic 3=17490
 electrical resist., effect of temp. and pressure 3=25323
 enamel (Sr⁹⁰) source of bremsstrahlung 1=16742
 excitation and ionization in solar flares and prominences 2=15355
 film on W, Mo, Ta, work function variation 2=1474
 flame resonance lines, optical cross-sections 1=8815
 impurity in KCl, effect on dielectric losses 1=1128
 isotopic composition, spectral determination 0=13418
 lattice parameters, 10°–300°K, rel. to mag. structure 4=4626
 phase diagram, molten—b.c.c.—f.c.c. 4=4505
 positive ions, 5–25 keV, sputtering of Cu 1=8363
 resonance lines, broadening, by various perturbing gases under flame conditions 4=12375
 in stars, high abundance 3=18641
 uptake by glass and polythene 4=2154
 vapour pressure and heat of sublimation 4=8523
 Sr²⁺ influence on NO₂ u.v. spectrum in ionic melts 2=15593
 Sr II spectral lines, oscillator strengths 1=13954
 Sr⁸⁷/Sr⁸⁶ isotope ratio from limestone 2=20761
 Sr^{88,90}, yield from neutron fission of U²³⁵ 2=3635
 Sr⁹⁰, in milk and rainwater, Mexico 4=25347
 Sr⁹⁰, in oceans, vertical distribution 4=2183
 Sr⁹⁰—Y⁹⁰ beta sources 2=5620
 on W, adsorbed layer migration 4=23611
- Strontium compounds**
 acetate, in solution, dissociation rate, from u.s. absorption errata 3=5439
 binary phosphate glasses, properties 0=21216
 effect of compounds on Sr line intensities of flame spectra 0=4174
 extraction from reactor fission products 0=4719
 ferrite, temp. dependence of magnetization 1=11449
 ferrites, Ba and Sr mixed, magnetic energy, magnetization and coercive forces 3=13279
 fluoride, Mn-activated, correlation of luminescence with e.s.r. 4=26411
 oxide, as cathode coating, emission properties 1=18911
 Ba—Sr titanate, use for dielectric bolometers 1=4499
 SF₆ formation by inelastically scattered electrons 3=12068
 Sr acetate, aq., dissociation on u.s. absorption 2=13334
 Sr borates, atomic crystal structures 4=15787
 Sr cyanoplatinate, as γ -scintillator 3=6668
 Sr ferrite, modified, new permanent magnet material 3=15881

Strontium compounds—contd

- Sr ferrite, powder, single-domain magnetic props. 3=15880
- Sr ferrite, susceptibility, temp. -depend., above Curie pt. 4=15656
- Sr formate, simple and dihydrate, elastic and thermo-elastic props. 3=23281
- Sr, i.r. reflection and transmission spectra 4=26184
- Sr magnesium phosphate: Sn, luminescence 2=14713
- Sr metaniobate in Na niobate, dielec. and piezoelec. props. 0=630
- Sr meta-antimonate luminescence rel. to impurities 2=8558
- Sr molybdate crystals, refractive index 3=13150
- Sr nitrate, infrared spectra 2=6580
- Sr nitrate, photoelastic consts. in presence of axial tilt det. 1=19953
- Sr perovskites, complex, small distortions, X-ray study 4=9963
- Sr sulphate, surface energy of 100 faces, calc. 4=20178
- Sr titanate, rel. to use in dielec. parametric amplifier 4=24828
- Sr titanate, i.r. transmittance, -187°C to 26°C 1=14571
- Sr titanates, dielectric properties rel. to neutron irradiation 1=12475
- SrAl₃, hot-hardness 2=2337
- Sr-B phosphors, luminescence kinetics 3=10993
- SrB₆, semiconducting props. and electron requirements 3=8330
- Sr(B_{0.33}Nb_{0.67})O₃, B' any divalent metal, crystal structure 4=4619
- SrB₂O₄·4H₂O, crystal structure, atomic 4=29141
- (Sr, Ba)Nb₂O₆, ferroelec. props. rel. to structure 0=8217
- (Sr-Ba) TiO₃ ceramics, permittivity and field factor 2=670
- Sr-Bi titanates, complex permittivity, temp. depend. 0=16025
- Sr-Bi titanates, ferroelec. props. 1=3802
- Sr-Bi titanates, phase transformations, rel. to ferroelec. props 3=25653
- SrBi₃, superconducting, crystal structure 2=10905
- SrBr₂, crystal structure, atomic 4=13604
- SrCl₂, aq., Soret effect at 25°C 2=7200
- SrCl₂ ionic melt, electromigration 790° - 1060°C 2=15144
- SrCO₃, aragonite structure, out-of-plane bending of the CO₃ ion 3=25189
- SrCO₃, crystal structure, effect of neutron irradiation 4=26564
- Sr(CO)₃, Raman spectrum 0=2946
- (Sr_{0.76}Ca_{0.24})(Ti_{0.76}Sn_{0.24})O₃, anomalous polarization and discharge currents 3=13120
- SrCl₂, e.s.r. of Mn²⁺ 1=14802
- SrCl₂, e.s.r. of Mn²⁺, Gd³⁺, and Eu²⁺ 0=3132
- SrCl₂, optical pumping of Eu²⁺ 0=1829
- SrCl₂, phase transformations, heat of fusion 4=8501
- SrCl₂·6H₂O, Mn²⁺ impurities 4=1467
- SrCl₂·Mn²⁺ e.s.r. line intensities ang. depend. 4=26410
- SrCl₂:Sm²⁺, absorpt. and fluoresc. spectra 3=13204
- SrD, near u.v. absorption bands 3=25106
- SrF₂, capture levels and recomb. nature of thermoluminesc. 4=28728
- SrF₂, cohesive and surface energies calc. 2=6245
- SrF₂, coloration spectra 3=2837
- SrF₂, colour centres 2=3958
- SrF₂, coloured and uncoloured, absorption bands, model 2=3957
- SrF₂, crystal growth, Czochralski method 1=14990
- SrF₂, crystal internal charge compensation by interstitial F⁻, e.s.r. obs. 4=22460
- SrF₂ crystals, transparency 2=6555
- SrF₂, decomposition, electron irradiation, in micro-scope 3=21004
- SrF₂ doped with 1% Dy³⁺, fluorescence excitation by two-photon absorpt. 4=17599
- SrF₂, e.s.r. of Gd³⁺, effects of heat treatment, hydrolysis 4=1877
- SrF₂, e.s.r. of Gd³⁺, meas. analysis 4=4407
- SrF₂, e.s.r. of U⁴⁺, charge compensation 3=3180
- SrF₂, electrolytic colouring, colour centres 2=21078
- SrF₂, Er³⁺ and Yb³⁺ absorption and luminescence spectra 3=3000
- SrF₂, Eu²⁺ e.s.r. 4=1874
- SrF₂, Eu²⁺, Sm³⁺ impurities, electron phototransfer 3=951
- SrF₂, fusion, heat and entropy meas. 2=9463

Strontium compounds—contd

- SrF₂, growth of highly-perfect single crystals for masers, 3=23397
- SrF₂, i.r. reflectivity and transmission 2=21236
- SrF₂, luminescence spectra 0=10066
- SrF₂, luminescence spectra 1=2455
- SrF₂, Mn diffusion, by e.s.r. 2=10409
- SrF₂ photoelectric emission yield for 1.54-13.3 Å X-rays 1=13109
- SrF₂, photoelectron emission 1=13108
- SrF₂, photoelectron yield from soft X-rays 1=2990
- SrF₂, pure, annealed in O₂ and air, optical absorption 4=12787
- SrF₂, refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 Å 4=22846
- SrF₂, Raman, fluorescence and absorption spectra 4=17582
- SrF₂, single crystals, coloration spectra 1=19808
- SrF₂, surface energy of {110} face 3=22632
- SrF₂, U-activated, luminescence; "relaxation spectra" 3=3035
- SrF₂, U^{3+,4+} e.s.r. 4=26438
- SrF₂, U⁴⁺ e.s.r. and charge compensation 4=26439
- SrF₂·BaF₂ single crystals, optical transmission 2=690
- SrF₂:Er, i.r. quantum counter action 4=22872
- SrF₂:Ho, Er, absorption and emission spectra of Ho²⁺ and Er²⁺ 4=13038
- Sr₂FeNbO₆, phase transitions 3=20773
- SrF₂:Nd, absorption spectra, luminescence, 77°K, optical maser 3=20482
- SrF₂:Sm²⁺, absorpt., luminescence spectra 2=21242
- SrF₂:Sm²⁺, absorption and luminescence spectra, Zeeman effect 3=18026
- SrF₂:Sm²⁺, fluoresc. selection rules 3=13204

energy levels, from normal co-ordinate analysis 4=17297
halides, mol. structure 3=4759
methyl isothiocyanate, molal thermodynamic props.,
ideal gas state, 273-1000°K 3=14210
molecular refractivities 3=15332
molecules, bonding, d orbit construction
unnec. 4=25682
polysulphur nitride, electronic props. 2=14509
positron annihilation in, γ -ray ang. correl., similarity of
 S^{2-} and Cl^- ions 0=15336
radiation-induced free radicals, e.s.r. in polycryst.
state 3=3413
semiconducting sulphides, preparation in porous plug
reactor 4=22723
use in sensitization of photog. emulsions 0=12745
sulphamic acid ($\text{NH}_2\text{SO}_3\text{H}$), crystal structure 0=8228
sulphate, anhydrous, Raman spectra, comparison,
and crystal forces 3=13186
sulphate film-gas phase, high-temp. exchange, internal
source effects 3=6896
sulphate radicals, conc. meas. by oxidation
chemiluminescence 4=2151
sulphates, 18, i. r. spectra meas. 4=13059
sulphates, photoconductivity meas. 3=8570
sulphide phosphors, photocond. and luminescence,
model 1=19910
sulphide phosphors, photocond. relax. theory 3=4953
sulphides, α -scintillations, effect of elec. field 0=16105
sulphides, with S vapour in equilibrium, composition of
vapour 3=25805
sulphur hexafluoride, compressibility, theory and
expt. 2=19605
sulphuryl chloride, rot. spectrum meas. 4=20071
sulphuryl fluoride, thermodynamic props. 0=5016
thiolacetic acid, molal thermodynamic props., ideal gas
state, 273-1000°K 3=14210
thiourea, molal isothiocyanate, model thermodynamic
props., ideal gas state, 273-1000°K 3=14210
 D_2SO_4 , molecules, normal vibr. freqs. and thermodyn.
props. 3=12842
 H_2S_2 , molal thermodynamic props., ideal gas state,
273-1000°K 3=14210
 H_2SO_4 , drop growth in humid air stream 1=11746

Sulphur compounds—contd

- H_2SO_4 , electrolysis, induced e.m.f. 0=12107
 H_2SO_4 , γ -ray irradi. at 77°K, atomic H and H_2 yields 0=14137
 H_2SO_4 , molar sound velocity 0=19133
 H_2SO_4 , molecules, normal vibr. freqs. and thermodyn.
props. 3=12842
 H_2SO_4 - H_2O systems, self-nucleation 1=20771
S chloride liquid state, u.s. velocity and
compressibility 1=18406
S cpds., outer shell, data from K α transitions 3=19997
 S^{2-} , reactions with PO_3^{3-} , B_2O_3 , TiO_2 , MoO_3 , WO_3 , in
molten NaF and NaCl, by cryometry 3=8967
S-As-Tl glass, i.r. optical constants 2=8479
 SCCl_4 , force consts., in plane vibrations, compared
with OCCl_4 3=19998
 S_2Cl_2 , flash photolysis 0=16382
 SCL_2 , molal thermodynamic props., ideal gas state,
273-1000°K 3=14210
 S_2Cl_2 , molal thermodynamic props., ideal gas state,
273-1000°K 3=14210
 $\text{SD}(\Pi)$ radical, $J = \frac{3}{2}$ state, e. s. r. 4=3905
 SF_4 , bond length differences, theory 3=10497
 SF_6 , for calibration of electron energy scale 0=10952
 SF_6 , mol. structure, by electron diff. 3=25113
 SF_6 , molecular vibrations 2=16533
 SF_6 , n.m.r. 3=17613
 SF_6 , structure and dipole moment 2=6125
 SF_6 , thermodynamic properties, 100° to 1500°K 3=21445
 SF_6 , Urey-Bradley force field 3=19989
 SF_6 -air mixtures, electrical breakdown, time
lag 4=16455
 SF_6 , bubble chamber appl., bubble density 2=248-9
 SF_6 , compression and solid state phase transitions 2=4357
 SF_6 , d-orbitals 2=20839
 SF_6 , dielec. const., 800 Mc/s, 295° to 630°K 4=14220
 SF_6 , diffusion, in binary mixtures with N_2 , CO, Ar,
290-470°K 4=27216
 SF_6 , dissociation energy of F bond 1=8858
 SF_6 , ion formation by capture of electrons 2=22178
 SF_6 , ioniz. and attachment cross-sections meas. 4=16436
 SF_6 , ionization, electron avalanches analysis 2=3003
 SF_6 , ionization by electron impact 1=8309
 SF_6 , ionization of gas and breakdown 2=17784
 SF_6 , ionization by H^- and O^- 1=16269
 SF_6 , liquid, n. m. r. and diffusion meas. 4=2715
 SF_6 , microwave absorption in compressed gas 2=13380
 SF_6 , mol. structure, by electron diff. 3=25113
 SF_6 , molecular vibrations 2=16533
 SF_6 , n. m. r. of F^{19} , isotope effect of $\text{S}^{33,34}$ 4=3911
 SF_6 , Raman intensities for $\nu_1(a_1)$ modes 3=22559
 SF_6 spheres and SF_6 -air mixtures, breakdown volt-
age 3=4095
 SF_6 , Townsend discharge, ion identification and mobility,
by time-of-flight mass spectrometry 3=16905
 SF_6 , trace detection in air, by electron attachment 1=12684
 SF_6 , transport props. meas., rotational
relax. 4=5241
 SF_6 , vibr. energy transfer with methyl ether, C_2F_4
and ethylene 3=6434
 S_2F_2 , existence of non-planar FSSF isomer 4=6604
 S_2F_2 molecule, microwave and mass spectra 4=3879
 SF_3BF_4 , unit cell and space group 4=26675
 SF_3Br , microwave spectrum and structure 3=22572
 SF_6 - CF_4 mixtures, viscosity and diffusion coeffs. 4=2725
 SF_4 and SOF_4 , molecular structures 4=6603
SH transition probabilities 0=11518
 $\text{SH}(\Pi)$ radical, $J = \frac{3}{2}$ state, e. s. r. 4=3905
 SF^+ , emission spectrum meas. 4=12474
[SN] $_x$ polymer, semiconducting and spectra 4=15545
 S_2N_4 , "electron-on-sphere", molecular-orbital
model 3=727
SO, absorption spectrum 0=8318
SO, dissociation energy meas. 4=16301
SO, dissociation energy 0=2736
SO, dissociation energy 4=12488
SO, dissociation energy from vac. u. v. spectrum 4=17861
SO, e.s.r., and molecular rot. 4=17309
SO, emission spectrum, rotational perturbations 4=12469
SO, evolution from Ni at 800-900°K 0=12120
SO, millimeter wave spectroscopy 4=28202
SO radical, absorpt. spectrum and dissoc. 3=2625
SO radical, dissociation limits, u. v. band
interpretation 4=6655

Sulphur compounds—contd

- SO(³Σ) radical, rotational states, e. s. r. 4=3905
 SO₂, absorption coeffs., vac. u. v. 2=6179
 SO₂, absorption profiles in far i. r., interpretation 4=28224
 SO₂, absorption radio waves, 100-117 Gc/s 1=4380
 SO₂, absorption spectrum, 2500-2000 Å 4=12489
 SO₂, aq., u. s. absorpt. rel. to ionic dissociation 2=5012
 SO₂-argon, free radicals in shock waves, flash-absorption spectroscopy 0=17760
 SO₂, diffusion in N₂-SO₂, 300-480°K 1=15946
 SO₂, dissociation, rel. to absorpt. and emission spectra 2=20878
 SO₂, energy transfer to different vibrations 1=19676
 SO₂, estimation in air, continuous, extraction, gas-liquid impinger 1=20782
 SO₂, evolution from Ni at 800-900°C 0=12120
 SO₂, excitation, 4 mm, double pumping 4=28226
 SO₂, excited states electron structure 2=14298
 SO₂, force const. determ. by isotopic mol. freqs. 2=18431
 SO₂, formation, by charge transfer from CS⁻ and NH₂⁻ 2=11616
 SO₃ gas, i. r. spectrum and thermodynamic props. 2=6161
 SO₂, i. r. spectral intensities, theory 0=4203
 SO₂, ion formation, negative, by electron resonance capture 2=7559
 SO₂, ionization, electron avalanches analysis 2=3003
 SO₂, mm radiowave absorption 2=7261
 SO₂-methyl iodide, SF₆ "indicator-cpds", ionization by electron bombardment 4=29868
 SO₂, millimeter wave spectrum 4=15356
 SO₂ mol., rotation spectrum, 1st vib. state 3=12840
 SO₂, mol. structure det. from moments of inertia 3=2597
 SO₂, molecular interaction with N₂ 2=14340
 SO₂ molecules, Stark effect calc. 3=8231
 SO₂, as possible molecular beam frequency standard 3=12882
 SO₂, potential function and equilibrium structure from microwave spectrum in excited vibr. state 4=22382
 SO₂, recorder for atmosphere 4=30928
 SO₂, refractivity, press. depend. 0=6839
 SO₂, rotation spectrum 1300-25 500 Mc/s 3=4763
 SO₂, rotational analysis of bands of 3800 Å system 4=6602
 SO₂, SO₃ photolysis 0=8318
 SO₂, solns., u. s. absorpt., 2-15 Mc/s, errata 3=5439
 SO₂ solution, in water, Raman spectrum, var. with conc. 4=14169
 SO₂, spectral line breadth and molecular interaction 3=12841
 SO₂, spectral linewidth and molecular interaction 3=17621
 SO₂, spectrum, absorpt. α₂ system, isotope effect, force const. 4=25683
 SO₂, spectrum, ~4, 8 mm 4=9748
 SO₂, spectrum line broadening by N₂ 3=8279
 SO₂, spectrum, rot., mm 4=28227
 SO₂, thermal cond., press. and temp. depend. 0=19202
 SO₂, u. v. absorption and dissociation energy 4=12488
 SO₂, ultrasonic relaxation 1=8162
 SO₂, vibration-rotation spontaneous emission probability 4=20070
 SO₂, X-ray spectrum, K absorpt. 3=23097
 SO₃, aq. soln., D substitution, effect on glass transform. temp. 3=23492
 SO₃, force constants 0=17723
 SO₃, Raman spectra, liquid and in solution 2=1154
 SO₃, refractivities 0=8777
 SO₃, vapour pressure 3=9663
 SO₂ ions, prodn. by charge exchange with primary negative ions 3=7444
 SO₃²⁻ molecules, normal coord. analysis 4=15357
 SO₃²⁻, S-O bond, stretching frequency 4=28231
 SO₄²⁻, adsorption on Zr, Zr surface treatment effects 4=13696
 SO₄²⁻ impurity, vibration in KCl crystals 1=12497
 SO₄²⁻ ion in CuSO₄ crystals, molecular structure 1=17895
 SO₃²⁻ molecule, normal coord. analysis 4=15357
 SO₄²⁻ and SO₃²⁻ energy levels, from normal co-ordinate analysis 4=17297
 SO₂^{16,18}, absorption spectra in vac. u. v. 4=6601
 S₂O, heat of formation det. 3=1385
 S₂O₇²⁻, vibrational frequencies, from oleum studies 4=18206

Sulphur compounds—contd

 u.v., 20-2000 Å, 480 line intensities 2=24116
 u.v., two lines of neutral Si 3=9200
 u.v. and X-ray, rocket meas. 3=23685
 u.v. and X-rays, eclipse obs. 2=15339
 u.v. and X-rays, historical survey 2=15337
 u.v. and X-rays, review of satellite expts. 2=13128
 unidentified lines, tables 1=15501
 vertical sounding, review of obs. 2=13129
 visible range, absolute intensities meas. 2=15333
 X-ray emission, 8 to 20 Å 4=2451
 X-ray emission, 4-14 Å, UK1 (Ariel) satellite
 results 3=16388
 X-ray, soft, satellite obs. 3=9152
 X-ray spectra rel. to non-flare and flare-active
 conditions 4=29463
 X-rays 2=15334
 XUV, rocket obs., 310 to 55 Å 4=26933
 150 major events (1952-60), spectral components 2=2559
 6162 Å, absorption coeff. of wing and damping
 const. 4=10895
 Bi I lines, u.v., rel. to abundance 3=9195
 C abundance, automatic computation 3=13884
 C-multiplet, near 10700 Å, centre-to-limb var. 4=29444
 C, u.v. lines, oscillator strengths 2=19307
 CH, 4300 band, local thermodynamic equilibrium 0=14416
 CN red system, (2.0) and (3.1) bands 3=21107
 CN, rel. to rot. temps. 4=26951
 CN, violet system study 4=23921
 Ca I and II resonance lines, polarization 4=4907
 Ca II, in flare spectra, Zeeman splitting 0=18759
 Ca II K_{333} line profile and solar atmosphere 4=2436
 Ca²⁺, K-line study, using birefringent filter 2=928
 Cr, neutral atoms 0=14435
 Cu I, resonance u.v. lines on surface, photometry 2=4769
 Fe⁺, λ 6238 and λ 6248, Doppler widths 0=14
 Fe, line-profile asymmetry, rel. to limb effect 2=17275
 Fe lines at centre, rel. to departures from LTE 3=5253
 Fe X, u.v. resonance line 0=14436
 Fe I, 8514 Å, acoustic waves effects 4=23910
 Fe I, equivalent width variation towards limb, growth
 curves 0=18772
 Fe I lines, growth curves, in solar spectrum 4=23911
 Fe I, sunspot growth curves, mag. field effects 0=18738
 Fe I and II lines, centre-to-limb variation 2=4777
 Fe II, gf values 3=9201
 Fe II lines 2=22904
 H⁺, continuous absorption due to free-free transitions
 calc. 1=2277
 H, α , β and γ lines, centre-to-limb variations 3=16371
 H α and H β line profiles, facula and photosphere 4=2431
 H, α -line profile, photoelec. observation 4=23920
 H α line, rel. to quiescent prominences stability 3=16383
 H β , H γ and K profiles of chromospheric
 spicules 0=18761
 H, i.r. transitions observed at 40 000 ft 1=9268
 H, Lyman- α , line profiles from rocket-borne spectro-
 graph 0=12277
 H, Lyman- α profile, high-altitude meas. 2=15344
 H profiles at limb 1=2620
 H and He⁺, Lyman series, by telemetering mono-
 chromators 2=15335
 He, in chromosphere, singlet and triplet lines 2=4771
 He lines, at extreme limb of solar disk 1=15473
 He I, excitation 0=6602
 He I, i.r. triplet line emission 3=5256

Superconductivity—contd

- Nb-25 at % Zr alloy, critical current 2=15851
 Nb-Zr alloy, h. f. energy absorption 4=27428
 Nb-Zr alloy at 9250 Mc/s 3=21666
 Nb-Zr alloy, Hall coefft. 3=13043
 Nb-Zr alloys 3=19115
 Nb-Zr alloys, a. c. power losses 4=27427
 Nb-Zr alloys, anisotropy w.r.t. mag. field 3=14452
 Nb-Zr alloys, critical current density 4=16363
 Nb-Zr alloys, critical currents in mag. field 3=21667
 Nb-Zr alloys, effect of pressure and transition temp. 4=5526
 Nb-Zr alloys, at high mag. fields and current densities 1=11878
 Nb-Zr alloys, u.s. absorption model 4=411
 Nb-Zr alloys, u.s. attenuation, oscillatory behaviour 3=12035
 Nb-Zr, anomalous resistive transitions 2=1337
 Nb-Zr, b.c.c., high mag. field 2=7519
 Nb-Zr, b.c.c. phases, equilibrium 2=21535
 Nb-Zr, cold worked, magnetization, 4.2°K, transport current effect 4=409
 Nb-Zr(25%), critical current, a.c., freq. var., in wires 4=11478
 Nb-Zr, critical current-critical field values 2=7513
 Nb_{0.75}Zr_{0.25}, critical current decrease by pulsed fields 4=14529
 3Nb-Zr, critical, current density meas. 3=5575
 NbZr, critical current depend. on dI/dt 3=12034
 Nb-Zr (25%), crit. current—mag. field var., deformation and heat treatment effects 4=27612
 NbZr, critical current, neutron irradi. effects 4=11475
 Nb-Zr, crit. field calc., from elec. cond. and specific heat 4=5521
 Nb-25% Zr, I_c degradation due to temp. cycling 4=29840
 Nb-Zr(25%), electrical losses, a.c., d.c. field effect 4=11482
 NbZr electromagnet 3=19409
 NbZr, energy gap, tunnelling meas. 4=21425
 Nb-Zr films, hard supercond., prep. and props. 4=24501
 Nb-Zr(25%), flux jumping, wire, and solenoid degradation 4=11477
 Nb-Zr, heat treated 2=11563
 Nb-Zr(25 at. %), high critical values, layered-filamentary struct. 4=13649
 Nb-Zr, high mag. field generation 2=13628
 Nb-Zr, mag. behaviour 4=16365
 Nb-Zr(25%), magnetization, cold work effects 4=11479
 NbZr wire, magnetization and transport current 4=410
 Nb-Zr-In, 1.3° to 20°K 3=16873
 Nb-Zr ribbons, critical current in external mag. field, anisotropy 4=16364
 Nb-Zr, Nb-Ti solenoids, "training" and flux jumping 4=24509
 Nb-Zr solenoid, current before and after breakdown 4=11489
 Nb-Zr solenoid, operation in 400 MeV proton flux 3=3970
 Nb-Zr solenoid, persistent current obs. 3=9685
 Nb-Zr solenoids, current-carrying capacity 3=3969
 Nb-Zr solenoids, remanent mag. fields 3=14459
 Nb-Zr solenoids, transition to normal state 3=21670
 Nb-Zr superconducting alloy, magnetization rel. to mag. field of solenoid of this alloy 4=11748
 Nb-Zr(25%), superconducting, critical current degradation 4=405
 Nb-Zr(25%), transients and losses on going normal without protective circuitry 4=11483
 Nb-Zr wires, critical currents 3=14454
 Nb-25% Zr wire, normal region propag., effect of Cu plating 3=14456
 Nb-Zr (25%) wires, trained, axial torque 4=18600
 Nb-Zr-Ta alloy 2=17728
 Ni, energy gap, tunnelling meas. 4=16374
 Ni, energy gap, u.s. meas. 4=18588
 Ni films, crit. current, var. temp., mag. field 4=21422
 Ni, periodic struct., neutron diff. obs. 4=18591
 Ni, specific heat 2=19817
 Ni, specific heat, at upper crit. field, discrepancy 4=18573
 Ni, surface electrical losses, in l.f. fields 3=12033
 Ni wires, quantum interference effects 4=24499
 Ni-Mo alloys below 1°K rel. to Mo conc. 2=1338
 NiP, 1.3° to 20°K 3=16873

Superconductivity—contd

- NiSb₃, 1.3° to 20°K 3=16873
 Ni-Zr, crit. current, effect of annealing temp. 3=14460
 Ni-Zr solenoid, 8.8 kG 3=7678
 Ni-Zr solenoid, 10 kG, design 4=8897
 Np, search using He-3 cryostat 4=21421
 Os, isotope effect meas. 3=19121
 Os-Ir solid solns. 3=3962
 Pb alloy, critical current/mag. field, imperfection effects 3=19112
 Pb alloys, absorpt., far i.r., and sharp edge gap, 4=24505
 Pb alloys, binary and isoelectronic 4=24504
 Pb alloys, far i.r. absorption, sharp edge gap 4=8569
 Pb alloys, with In or Bi, thermal cond. 1=12360
 Pb, apparent structure on far i.r. energy gap 0=1083
 Pb-base alloys, magnetic properties 3=9684
 Pb-base solid solutions 3=14449
 Pb cavity, high Q, for use at microwave freqs. 4=16379
 Pb, crit. fields, effect of cold working at 78°K 3=5588
 Pb, crit. field, effect of neutron irradiation, at 78°K 3=14451
 Pb, crit. fields var. with residual cond. 4=18579
 Pb, critical field curve, comparison with Hg 0=8935
 Pb, density of states, max. near Fermi level 0=20772
 Pb, density of states from tunnelling meas. 2=11572
 Pb, density of states var., tunnelling meas. 4=21417
 Pb domains, intermediate state, detection by electron beam 4=5518
 Pb, electron tunnelling, energy gap det. 1=8284
 Pb, energy gap, from far i.r. absorption 0=14933
 Pb, energy-gap functions, theory 3=16867
 Pb, energy gap, by penetration depth meas. 0=7034
 Pb, energy gap, u.s. meas. 4=18580
 Pb, energy gaps, by electron tunnelling 3=333
 Pb, energy, meas. by electron tunneling in Al/Al₂O₃/Pb sandwich 0=16949
 Pb film, thermal cond. and energy gap, mag. field effect 4=18608
 Pb films, critical mag. field 1=18716
 Pb films, current distrib. 2=22117
 Pb films, domain struct. and current flow, opt. study 2=7512
 Pb films, e. m. microwave absorption, energy gap var., mag. field effect 4=29835
 Pb films, energy gap, mag. field depend., tunnelling meas. 4=21414
 Pb films, energy gap, tunneling meas. 4=16347
 Pb films, pulse-induced destruction 4=21412
 Pb films, rel. to adsorbed O 3=16872
 Pb films, rel. to residual gases 3=16878
 Pb films separated by insulating layer, Josephson tunnel current, rel. to magnetic field 4=5506
 Pb films, vapour sources for vacuum deposition 3=9525
 Pb hollow cylinder, frozen-in mag. flux 3=12022
 Pb, hollow cylinder, normal transitions 0=8951
 Pb, i.r. absorption due to transverse collective excitations, theory 0=10842
 Pb, i.r. transmission, 0.1-1.1 mm, of films 0=10852
 Pb, injected electron capture lifetime 3=14450
 Pb, intermediate state, thermal conductivity 1=4973
 Pb, interphase surface energy parameter at 4.2°K 3=1902
 Pb, irreversibility in supercond. transition 0=12559
 Pb, isotope effect on critical field 1=1858
 Pb, law of corresponding states, expt. and theory compared 0=1074
 Pb, rel. to low-temp. props. of Pb thermal switches 2=2942
 Pb, magnetic field noise, Barkhausen type 3=24147
 Pb, pressure depend. of critical temp., up to 10⁴ atm. 0=8939
 Pb, pressure effect on critical field, up to 350 atm. 1=7001
 Pb, pressure and volume effects, critical mag. field, Fermi surface 1=258
 Pb ring, trapped-flux decay, rel. to irradi. 3=3955
 Pb, shot noise in circulating current 4=21416
 Pb, specific heat jump at critical temp. 4=5519
 Pb, specific heat, and normal, equal lattice T³ term 4=18585
 Pb, specific heat, 0.3°-4°K 3=10601
 Pb spheres, gyromagnetic effect 0=8949
 Pb superconducting state, structure at critical temp. 0=18337
 Pb, superconductive storage elements, relaxation times 0=7035

Superconductivity—contd

- Pb, surface electrical losses, in l.f. fields 3=12033
 Pb, temp. dependence of mag. field penetration 1=16198
 Pb, thermal cond. in supercond. state, effect of plastic deformation 0=8938
 Pb, thermal expansion and critical field 2=6286
 Pb, transition temp./gap ratio, effect of quasi-particle damping 4=18578
 Pb, transition temperature 1=18717
 Pb, transition, time delays in 500-1000A films 0=1082
 Pb, tunneling current, calc. 3=16858
 Pb wires, Al, Ag, Au covered, free energy change 4=18581
 Pb-Au film sandwiches, intermetallic cpd. effects 4=27422
 Pb-Bi, a.c. loss 3=3956
 Pb-Bi, crit. fields, parallel and perpend. 4=18582
 Pb-Bi, critical current rel. to field direction 2=17725
 Pb/Bi double layers, diffusion and contact effect 4=24513
 Pb-Bi (88:12) films, var., and metastable phase 4=23274
 Pb-Bi, thermal cond. in supercond. state, effect of plastic deformation 0=8938
 Pb-Bi wires, Al covered, free energy change 4=18581
 Pb and Cu films superimposed 4=16348
 Pb-Gd, Ga depend. 0=8933
 PbIn alloy film, current-voltage curve 4=14530
 Pb-n-Ge junction, tunnelling characts. for supercond. Pb 4=20382
 Pb-normal metal superimposed films, meas. 4=24503
 Pb-Pb contact resistance, motion effects 4=16349
 Pb-Pb tunnelling, multi-particle temp. independent 4=21419
 Pb-Pb tunnelling, phonon-assisted 4=21418
 Pb-PbO-Pb jns., Josephson a. c. current, tunnelling calc. 4=29837
 Pb-Sb alloy, normal-superconducting transition, decomposition effect 4=29836
 Pb-Sb, tunnelling characteristic, phonon spectrum image 3=24146
 Pb-Sb(2.45 wt. %), critical field var. with aging, and precipitation 4=5520
 PbSn alloy film, current-voltage curve 4=14530
 Pb-Sn cavity, high Q, for use at microwave freqs. 4=16379
 Pb and Sn films, intermediate state study 2=9487
 Pb-Sn and Pb-Cd, effects of pptn. 3=24145
 Pb-Te films, persistence beyond H_{c2} tunneling obs. 4=18584
 PdTe, and mixed crystals with Ni, Rh, Pt 2=5241
 $Pb_{0.5}Ti_{0.5}$, above upper crit. field, microwave obs. 4=16351
 Pb-Tl alloy, far i.r. absorpt. 2=7511
 Pb-Tl crystals, quasi-reversible mag. behaviour 3=3957
 Pb-Tl delayed flux entry 4=24506
 Pb-Tl films, crit. field anisotropy 4=16350
 Pb-Tl, critical surface field 4=11474
 Pb-Tl system, surface, ang. var. 4=27421
 Pd cobaltite- and pyrite-type compounds, $> 1^\circ K$ 3=21663
 Pu, search using He-3 cryostat 4=21421
 Pt cobaltite- and pyrite-type compounds, $> 1^\circ K$ 3=21663
 Pt-metal compounds, new superconductors discovered 3=24148
 Re, change of transition temp. with press. 3=14461
 Re, deformed crystals, anisotropy 2=22121
 Re, domains, effect of cold-working 0=2293
 Re, neutron irradiat. 0=3706
 Re, plastic deformation and annealing temp., effect 2=2960
 Rh, absence of isotope effect 3=3963
 Rh, critical mag. field, down to $0.3^\circ K$ 0=12561
 Rh_1S_{16} , crystal structure 3=8841
 Rh-Ti alloys, transition temp. 3=21669
 Rh-Zr alloys, transition temp. 3=21669
 Ru, critical temp., no isotope effect 1=8285
 Sb, pressure and volume effects, critical mag. field, Fermi surface 1=258
 Si two-component diffusion films into V 4=5527
 Sn 4=17583
 Sn, absorption, u.s., osc., models 4=14536
 Sn alloys, binary and isoelectronic 4=24504
 Sn alloys, a.c. mag. transition hysteresis 4=18611
 Sn alloys, first and second kind, meas. 4=8574
 Sn alloys, transition temp. rel. to specific heats 2=10330
 Sn, below $1^\circ K$, thermal conductivity 0=8937

Superconductivity — contd

- Sn, bulk, tunnel effect $1.36^\circ-3.6^\circ K$ 3=1901
 Sn, crit. fields and hysteresis 4=18609
 Sn, critical field curves 0=16951
 Sn, critical field, press. depend. 2=15853
 Sn, critical persistent current rel. to temp. 4=16370
 Sn, critical temp., change due to electrostatic charging 0=19559
 Sn, current transitions in films 0=1081
 Sn cylinder in mag. field, resistant/current var. 3=21658
 Sn cylinder, persistent curv. stability 4=18606
 Sn, density of states from tunnelling meas. 2=11572
 Sn, density of states var., tunnelling meas. 4=21417
 Sn, destruction, critical resistance 0=12563
 Sn, effect of residual gases 1=2921
 Sn, electron tunnelling, energy gap det. 1=8284
 Sn, energy gap 2=5243
 Sn, energy gap anisotropy, from absorpt., u.s., 100-250 Mc/s 4=14537
 Sn, energy gap anisotropy, in binary axes plane, u.s. absorption data 1=1861
 Sn, energy gap anisotropy, u.s. absorption study, temp. depend. Q=19567
 Sn, energy gap rel. to cryst. orientation 2=15855
 Sn, energy gap, by electron tunnelling 3=333
 Sn, energy gap, from far-i.r. absorption 0=14933
 Sn, energy gap, mag. field depend., calc. 1=1859
 Sn, energy gap, tunnel effect study 4=8573
 Sn, Fe impurities decrease gap and transition temp. 4=18574
 Sn film boundary effects, crit. temp. and field 4=16373
 Sn film, microwave impedance rel. to direct current 4=16371
 Sn film, microwave non-linearities 4=21429
 Sn film, normal-superconducting phase boundary, thermal propagation 3=16877
 Sn, film, Silsbee crit. currents 4=24510
 Sn film, thermal cond. and energy gap, mag. field effect 4=18608
 Sn films, a.c. field 180° phase shift across 4=14533
 Sn films, rel. to adsorbed O 3=16872
 Sn films, Ag and Co coatings, effect on transition 2=22122
 Sn films, crit. field meas., rel. to theory 2=13517
 Sn films, crit. fld. meas., London limit 2=19820
 Sn films, crit. temp., rel. to elastic strain 2=1340
 Sn films, critical currents 0=12562
 Sn films, critical fields, calc. 0=16954
 Sn, films, critical temperature rel. to electrostatic charging 3=15545
 Sn films, cylindrical, critical mag. fields and currents 0=8940
 Sn films, destruction by current pulses 2=142
 Sn films, destruction by current pulses 3=3966
 Sn, films, e. m. microwave absorption, energy gap var., mag. field effect 4=19835
 Sn films, edge effect elimination 4=24502
 Sn films, edge effects 2=11567
 Sn films, energy gap temp. depend., tunnelling meas. 4=21413
 Sn films, high freq. behaviour and crit. temp. changes 2=2963
 Sn films, hysteresis in phase transitions 3=9687
 Sn films, as i.r. bolometers, 50-1000 μ 0=19495
 Sn films, low residual resistivity 0=10854
 Sn films, mag. moment 2=16883
 Sn films, mag. moment. 3=6687
 Sn films, mag. phase transition, influence of aggregation 0=10855
 Sn films, mag. props. 1=16202
 Sn films, mag. transitions 3=19124
 Sn films, on normal metal, surface energy effects 2=9488
 Sn films with paramag. additions, transition temp. 4=14532
 Sn films, penetration depth 0=8931
 Sn films, pulse-induced destruction 4=21412
 Sn films, quantized vortex obs. 4=18610
 Sn films, rel. to residual gases 3=16878
 Sn films, supercond.-normal cond. transition 0=16950
 Sn films, surface charge, effect on transition temp. 2=17730
 Sn films, as switching elements 2=5244
 Sn films, transition properties meas. 1=16193
 Sn films, transitions in mag. fields 2=11566
 Sn films, vapour sources for vacuum deposition 3=9525

Superconductivity—contd

- Sn, γ -ray resonance absorption rel. to Debye Θ 2=19819
 Sn, h.f. surface impedance 0=10850
 Sn, Hall effect, r.f., calc. 1=260
 Sn, hard, upper critical mag. fld, rel. to electron mean free path 4=11486
 Sn, i.r. transmission, 0.1-1.1 mm, of films 0=10852
 Sn, intermediate state, thermal conductivity 1=4973
 Sn, interphase surface energy 0=7028
 Sn, Kapitza resistance 3=311
 Sn, law of corresponding states, expt. and theory compared 0=1074
 Sn, mag. field sign reversal 2=17731
 Sn, mag. field sign reversal 4=16372
 Sn, mag. moment and susceptibility 1=10640
 Sn, mag. and sp. ht. data, thermodyn. correl. 2=15852
 Sn, meas. 1=17433
 Sn, microwave effects, nonlinear, and switching speed 3=19123
 Sn, microwave magneto-impedance meas. 4=14535
 Sn, Mössbauer effect 4=16368
 Sn, n.m.r., 1.5-4.2°K 1=2922
 Sn—normal metal superimposed films, meas. 4=24503
 Sn, 0-1730 kg/cm², T_c shift 1=18723
 Sn oxide, tunneling, anomalous d.c. 3=14462
 Sn, paramag. sign effect in transverse field 4=27434
 Sn, pressure depend. of critical temp., up to 10⁴ atm. 0=8939
 Sn, rel. to Sn¹¹⁹ Mössbauer quanta 2=3817
 Sn, specific heat, λ -type singularity 2=19818
 Sn, specific heat in supercond. state 1=11162
 Sn, specific heat temp. var., quantized flux 4=21370
 Sn strips, quantized vortices, from osc. in resistance/mag. field 4=5529
 Sn, supercond.—normal transit, current-induced, switching times 4=24512
 Sn, surface impedance, calc. 0=10841
 Sn, surface impedance changes 4=16369
 Sn, surface impedance, mag. field depend 2=11565
 Sn, surface impedance, with modified BSC gap, temp. var. 4=18607
 Sn, surface impedance, theory and expt. 4=24511
 Sn, surface resistance, 17-77 kMc/s and 1.5-3.0°K 0=1080
 Sn, surface tension between normal and supercond. phases 2=15856
 Sn, surface tension between normal and supercond. phases 3=5594
 Sn, surface tension at supercond.—normal phase boundary 0=19566
 Sn, thermodynamics 1=11883
 Sn thin film rings 200-700 Å, trapped flux and crit. currents 2=13513
 Sn thin films, crit. current density rel. to temp. 3=3965
 Sn, transition, no time delay detected 0=1082
 Sn, transition temp., effect of nonmag. impurities 3=16876
 Sn, transition temp., effect of quenched-in defects 1=17507
 Sn, transition temp., effect of Sb impurities and plastic deform. 3=19125
 Sn, transition temp., impurity effect, theory 0=14927
 Sn, tunnel effect, 1.36°K 4=14534
 Sn two-component diffusion films into Ni 4=5527
 Sn, u.s. absorption, anisotropy 0=13501
 Sn, u.s. attenuation, 1.5°-4.2°K 1=14173
 Sn, u.s. shear wave attenuation meas. 4=9845
 Sn, variation with frequency 0=8936
 Sn, wires, metal plated, contact supercond. 0=5235
 Sn—Al, In, Pb or Bi diffusion layers on Ni, crit. currents 4=21430
 Sn—Cu alloy films, transition temp., Cu conc. depend. 1=3725
 Sn—In alloys, energy gap 2=15855
 Sn—In alloys, surface impedance, theory and expt. 4=24511
 Sn—In alloys, thermal resistance in intermediate state 0=7033
 Sn/In double layers, diffusion and contact effect, 4=24513
 Sn and In, thermal conductivity 1=16201
 Sn—Pb detector, for mag. field meas. 3=468
 Sn—Pb eutectic layers, proximity effect, from specific heat 4=18612
 Sn—Pb(0.87%), phase transformation, filamentary, complex susceptibility detection 4=414

Superconductivity—contd

- Sn—Ta, Sn—In films, crit. current temp. var., > Sn 4=21426
 SrBi₃, cryst. struct. 2=10905
 SrTiO₃, semiconducting 4=18602
 Ta 2=6292
 Ta, absorption, u.s., long., 45-340 Mc/s, and 2 ϵ_0 4=16355
 Ta carbide, transition temp. rel. to composition 2=2962
 in Ta coil, use in He level indicator 4=16320
 Ta, critical field curves 0=16951
 Ta, critical field, effect of temp. and press. 1=11879
 Ta, defects 2=9489
 Ta, effect of imperfections 1=16200
 Ta, energy gap, by electron tunnelling 3=333
 Ta, energy gap, from far-i.r. absorption 0=14933
 Ta, energy gap meas. by tunnel effect 2=11569
 Ta, energy gap, temp. depend., ultrasonic meas. 4=2922
 Ta, energy gap, tunnelling meas. 4=16374
 Ta films 0=2291
 Ta films, critical fields, transition temps. meas. deposition method effect 4=29838
 Ta films, energy gaps 4=14530
 Ta films, prod. by protected sputtering 2=17720
 Ta films, size effects and coherence length 4=14538
 Ta films, var. substrate temp., annealing 4=18603
 Ta, mag. field penetration depth 4=27437
 Ta, mag. moment and susceptibility 1=10640
 Ta, pair correlations 4=413
 Ta, pressure and volume effects, critical mag. field, Fermi surface 1=258
 Ta, resistance transition induced by mag. field 0=2292
 Ta, single crystals, energy gap meas. 4=14531
 Ta, single crystals, prep. for critical field meas. 0=8955
 Ta, specific heat, λ -type singularity 2=19818
 Ta, thermal cond., 0.2-1.2°K 2=8183
 Ta, transition, liq. He level indicator 2=7487
 Ta, transition temp. in high-purity metal 1=7000
 Ta, transition temp. for purified specimens 0=16952
 Ta, type change with temp., and purity 4=18604
 Ta, vapour-deposited superconductive films, use as getter 4=11481
 Ta wires, quantum interference effects 4=24499
 TaC films, critical fields, transition temps., meas. deposition method effect 4=29838
 TaC, pure and with 1% Co 2=11568
 TaC—NbC, crit. temp. composition var. 4=21427
 TaN films, critical fields, transition temps., meas. deposition method effect 4=29838
 Ta⁴⁵—Nb⁵⁵, crit. current, long. mag. field effects 4=18605
 Ta—Nb crystal, time effects 4=16375
 Ta—Nb mixed single crystals, thermal cond. 4=15438
 Ta—(55 at.%)Nb, second kind, current capacity 3=19122
 Ta—Nb single mixed crystals, trapped magnetic flux in 0=7027
 Ta—Ni, wire, critical currents and magnetization 4=21428
 Ta—Ti, critical current, var. with mag. field and composition 4=11484
 Ta—Ti wires, critical currents 3=14454
 Ta₂C, establishment, down to 1.98°K 3=7406
 Tc alloys and cpds., transition temps. 1=11881
 Tc, transition temperature 3=334
 Th, press. var. of crit. temp. 4=21420
 ThC, at 9°K 4=28416
 Ti alloys, dilute hexagonal, meas. 4=18613
 Ti alloys, dilute, resistivity and magnetoelec. props. 2=15854
 β -Ti alloys, ternary 4=18614
 Ti, effect of Fe in dilute solution on T_c 1=3882
 Ti films, prep. by "protected sputtering" 4=18587
 Ti solid solns. with Co, Rh and Ir 4=8575
 Ti, transition temp., effect of Cr, Mn, Fe, or Co in solid solution 0=1079
 Ti—Mn alloys, rel. to localized mag. states 4=2923
 Ti, Mn impurity effects on crit. temp. 4=5528
 Ti—Mo alloy, high mag. field transitions 3=16879
 Ti—Mo alloys, specific heat 1=13046
 Ti—Mo, b.c.c., high mag. field 2=7519
 Ti—Mo, high-field props. 3=9686
 Ti—Mo, T. rel. to composition 2=7520
 Ti—Nb alloy, high mag. field transitions 3=16879

Superconductivity — contd

- Ti—Rh alloys, crit. temp., influence of lattice structure 3=7407
 Ti—Rh alloys, transition temp. 3=21669

 Ge, surface potential inhomogeneities; electron mirror obs. 3=10783
 Ge, surface states, cleaned and oxidized 3=17856-7
 Ge surfaces, Ag diffusion 1=19805
 Ge, thermal regeneration temp. of oxygenated surface 1=11597
 Ge transistors, effects of vacuum drying 3=2942
 Ge-Al₂O₃ interface, elec. relax., slow 4=25994
 Ge-NaOH solution interface, conductance 3=10781
 Ge, O₂ adsorption 2=23918
 Ge and Si, electrical conductivity 1=14454
 H atom recombination on Al surfaces 4=13721
 H, atomic, recombination on Pt 3=20987
 H₂O, shallow, wave effects on acoustic absorpt. 4=14276
 Hg and metal surface, thermal contact resistance 1=18646
 InAs [III], characteristics 1=20657
 In-Pb(6%), superconductivity, nucleation field reduction by plating 4=18575
 InSb, conductance, photocontrolled 4=20371
 InSb, structure and props. 1=4078
 InSb, surface conductance meas. for p-type crystal in heptane and heptane-ethanol mixtures 4=28564
 InSb surfaces, O₂ association, rel. to yield drop 3=13353
 InSb [III], characteristics 1=20657
 K, adsorption, desorption, ionization and diffusion on W, var. temp., K flux 4=23610
 LiF, effect of surface cond. and mech. props. 0=21096
 LiF, structure changes due to bombardment with alumina particles, annealing study 4=4044
 Mg, electron energy loss spectrum, effect of oxidation 0=9880

Surface phenomena—contd

- Mg, oxide film formation 3=23512-13
 MgO, interaction with electron beams 2=6394
 MgO, interaction with various gases at high temp., etch patterns 1=20661
 MnO₂, apparent contact ferroelec. effect 2=14607
 MnO₂, γ-phase samples with various specific surfaces 4=7701
 N migration on W 0=7838
 NH₃, adsorption on Vycor glass 2=6858
 Na, cond., elec., in mag. field, and cyclotron reson. with helicon waves 4=22554
 Na₃AlF₆, films, mobility, during growth, from optical props. 4=2120
 NaCl, cleaved, evaporation decoration by Ni, Permalloy films 3=20931
 NaCl, crystal growth patterns, on heating, impurity effects 4=4553
 NaCl crystals, plastic deformation at high temp. 2=4323
 NaCl, Ca²⁺ doped, indentation hardness meas. 4=23208
 NaCl, effects of elec. discharge 3=13558
 NaCl, evaporated films, sintering, surface smoothing, loss of surface area 3=25777
 NaCl, exchange of Cl³⁶ with halogen gases 1=4076
 NaCl, healing of indentations, kinetics 2=2420
 NaCl, n.m.r. dipolar line broadening surface effects 1=20266
 NaCl, X-ray induced surface hardening 1=2398
 Nb, stress effect on Lüders band velocity 4=23193
 Ni, accommodation, effect of surface texture 4=2126
 Ni, atomic vibrations, rel. to electron diff. 2=19127
 Ni, clear surfs. catalysis of H₂-D₂ exchange 2=6871
 Ni, interaction with N 2=8894
 Ni, O₂ interaction with clean (111) surface 4=7702
 Ni, O₂ interaction with (110) face, struct. 4=23556
 Ni, (110) surface, clean and slightly contaminated, study 1=20658
 Ni oxidation temp. effects on water boiling on wire 4=11423
 Ni oxides, layers on Ni at 900°C in air, X-ray diff. exam. 3=16129
 Ni, reconstruction rel. to foreign atom adsorption 2=21558
 Ni, superconducting, surface electrical losses, in l.f. fields 3=12033
 Ni, (2 × 1) struct. on H adsorption on (110) surf. 2=23922
 Ni-Br reaction, mass-spectrometric obs. 4=10636
 O atom recombination 0=511-12
 O atom recombination on metal 0=6405
 P, red, interaction with alkyl iodide vapours, desorption 0=3305
 Pb, superconducting, surface electrical losses, in l.f. fields 3=12033
 Pb-Bi, supercond. crit. field 4=18582
 PbO, photoconductivity, in n-PbS-p-PbO films, in Resistor charge-storage tubes 3=25419
 PbS, rel. to photoconductivity 1=17802
 PbS, sensitized, photoeffects model 2=6499
 PbS, potential, changes on illumination 3=20414
 Pb-Te supercond., persistence beyond H_{c2}, tunneling obs. 4=18584
 Pb-Tl, superconductive, crit. surface field 4=11474
 Pb-Tl system, supercond., ang. var. 4=27421
 Pd, surface mag. states 2=4208
 Pt in air, accommodation coeff. rel. to pressure 4=27218
 Pt, self-diffusion, multiple scratch study 2=15087
 Rb atoms on paraffin covered walls, mag. relaxation 4=6492
 S electret, photodepolarizing kinetics, monocrystal 4=4220
 Sb, diffusion on Ge, 250-650°C 3=20223
 Se films containing S, photoelectrets, depolarization 3=23006
 Si, cleaved crystals, surface states 1=6157
 Si, cleaved surfaces 3=23383
 Si, by d.c., a.c. and pulsed field meas. 2=8349
 Si, damage annealing and Cu precipitation 4=7705
 Si, diffusion in Ni 3=6539
 Si, diffusion of Ga, B, conc. 4=4077
 Si, elec. effect of oxidation and etching 2=16712
 Si-electrolyte barrier layer 0=13649
 Si-electrolyte boundaries, surface conductivity and recombination 1=17715
 Si, electron microscope exam. of cleavage and growth by replica 4=13646

Surface phenomena — contd

- Si, electron states, field effect 2=23351
 Si, gas evolution 4=20796
 Si, mobility of electrons in p inversion layer, scatt. effect 4=20401
 Si, n-type conversion of thermally oxidized surf. 2=21164
 Si, n-type single crystals, field-effect meas. for cleaved surfaces 4=28573
 Si, n-type, surface energy levels 0=15938
 Si, (100) surf. bonding, model 2=23911
 Si p-n junctions, effects on reverse current and drift 4=20386
 Si, p-type film formation and removal 2=23203
 Si, p-type layer due to boron 2=16711
 Si, p-type, p-n junct. formation rel. to Li-ion irradi. 2=21146
 Si, photoelectric emission and work function 3=9833
 Si props., O₂ and water vapour effects 4=20795
 Si, recombination velocity, direct meas. 2=8347
 Si rectifiers, in various ambients, surface break-down 0=11702
 Si, semicond. diodes, p-n diffused, oxidized charges 4=10079
 Si, semiconducting, field effect, var. freq., amp. 4=20378
 Si semiconducting rectifiers, reverse current 4=4185
 Si semiconductor junctions, improvement by As-S-I glass coating 4=20387
 Si semiconductor reverse biased junctions, gamma ray effect reduction by passivation 4=20388
 Si, surf. treatment rel. to photocond. 2=10538
 Si, surface potential 1=11303
 Si, surfaces potential inhomogeneities; electron mirror obs. 3=10783
 Si, thermal regeneration temp. of oxygenated surface 1=11597
 Si: Au, chemical potl., temp. depend. 0=11699
 Si, C¹⁴ diffusivity, surface conc. 2=3939
 Si(3.25%)—Fe, and crystal structure, cubic 4=10582
 SiO₂, adsorption of hydroxyl groups, spectrum and heat vars. 3=8922
 SiO₂, elec. conductivity, due to adsorbed molecules 3=25318
 Sn atoms, mobility, influence of O₂ 4=13684
 Sn, diffusion in Ni 2=21068
 Ta crystals, degassing and deformation under heat and electric field 1=20662
 Ta, superconductivity type change 4=18604
 Ti and TiC, at interphase boundary with Ni and Co 4=8190
 W, accommodation coeff., He, Ar, N, 2800°K 4=4660
 W, adsorption, desorption, ionization and diffusion of K, var. temp., K flux 4=23610
 W carbide, Co-bonded, wear of hard and soft phases 0=18285
 W, reflection and dissociation of H₂ 2=20876
 W, self-desorption of residual gases, autoionic projector 2=8887
 W, surface migration in high electric field, activation energy 0=11646
 W, Th adsorption 2=10948
 Zn, coated with Hg, strength and plasticity, rel. to irradi. 4=10404
 Zn exchange from vapour with polycrystalline ZnO 1=9166
 Zn, fracture mech., effect of metal films 2=6751
 Zn, fracture mechanism, effect of metal films 1=20383
 Zn, plastic flow and surface removal 4=7430
 Zn silicate phosphors, in fluorescent lamps 0=11779
 Zn—(0 to 0.5%)Cd, effect on brittle fracture, -200°C to +200°C 4=10363
 ZnO—electrolyte interface, charge distribution 1=1484
 ZnO, electrophotographic, charging in discharge 4=18443
 ZnO, photocond. 2=8415
 ZnTe, asymmetries for (111) and ($\bar{1}\bar{1}\bar{1}$) faces 2=7644
 Zr, and adsorption of Br⁻ and SO₄²⁻ 4=13696

Surface tension

 Co, liq., rel. to atomic vol. 2=2692
 Cu, rel. to defect self-healing 4=12744
 Cu, sessile drop, optical meas. 3=16598
 Cu, temperature variation, 1100°-1500°C 4=8187
 Cu-Ni alloys, molten, 1550°C 4=8185
 F_2 , liq., coeff. calc. using significant structure theory 4=8166
 Fe, f. c. c., var. angle 4=13673
 Fe, liq., rel. to atomic vol. 2=2692
 Fe, molten, effect of N_2 4=21111
 Fe, temperature variation, 1550-1800°C 4=8188
 Fe, 1550°C 4=8186

Surface tension—contd

Fe-C alloys, approximate equation, 1550°C 4=8186
 Fe-N alloys, temperature effect 4=21111
 Ge, temp. depend. 0=19089
 H, para- 4=29605
 HD, liquid, 16.7-20.5°K 4=2644
 H_2 , D_2 , HD and H_2 - D_2 solns., rel. to temp., expt. 4=27164
 He II, temp. depend., theory 2=2943
 He³ liquid 0=8861
 He³-He⁴ liquid mixtures 3=24131
 Hg 1=15819-20
 Hg, contact angle 1=15819-20
 Hg, effect of various gases 2=1126
 Hg, orifice discharge meas. 4=24149
 Hg solutions, temp. depend. 3=21340
 Hg-H₂O-benzene, interfacial tensions, meas. by pendent drop method 4=144
 Hg-In amalgam, by sessile drop method 4=8158
 Hg/Na-decane sulphonate/ H_2 system 2=4995
 Hg-Tl amalgam, rel. to Tl content, by sessile drop method 4=8158
 In, at boundary between superconducting and normal phases 0=8934
 In, temp. var. and agreement with Mendeleevian periodicity 4=8189
 In-Ge alloys, molten, rel. to content 3=21335
 Mo, liquid, by electron beam heating 4=2643
 NaCl soln., effect of electrostatic fields 2=11347
 Nd, by bubble pressure, 1030-1186°C 3=5425
 Ni, rel. to crystallographic orientation 2=4485
 Ni, effect of Ti and TiC 4=8190
 Ni, liq., rel. to atomic vol. 2=2692
 Ni-liquid Pb system, interfacial tensions, effect of temp. and press. 4=15724
 Ni-C-S alloys 1=5265
 Pb solutions, temp. depend. 3=21340
 Sn, anisotropy at supercond.-normal phase boundary 0=19566
 Sn, molten, effect of impurities 4=7515
 Sn solutions, temp. depend. 3=21340
 Sn, 300-500°C 0=19088
 Sn-Bi, temp. var., in liquid, eutectic anomaly 4=21112
 Sn-Tl, 300-500°C 0=19088
 Ta, liquid, by electron beam heating 4=2643
 Te-Tl alloys, molten, rel. to electrochem. props. 0=10355
 Ti, liquid, by electron beam heating 4=2643
 W, solid phase 0=7839
 Zr, liquid, by electron beam heating 4=2643

Surface tension measurement
 adherent drop method, data analysis 3=23852
 automatic recording film balance system 0=2162
 bubble max. press., non-wetting systems 4=11168

 orifice discharge 4=24149
 oscillating jet method, corrections 2=21884
 photoelectric method, tensiograph 0=10644

Surface tension measurement—contd

- pure liquids and solutions, comparison of methods 1=6847
- sessile drop method 1=15819-20
- solids, from liquid contact angles 4=24148
- surface and interfacial, techniques 3=11776
- volatile tensio active substances, by torsion balance 4=14129
- wetting liquids, using hanging rod 4=18168
- Al, molten, stationary drop method 2=19532
- Ar liquid, by microbalance, simultaneous with viscosity meas. 4=24188
- Cu, molten, stationary drop method 2=19532
- H₂O, interfacial, hydrophobic ring use in zero contact angle methods 4=14128
- Sn between supercond. and normal phases 2=15856
- Sn, between supercond. and normal phases 3=5594
- Te 2=17427
- Ti, liquid, electron bombardment drop wt. method 3=23853

Surface texture

- alloys, rolling texture rel. to stacking fault energy 4=10565
- brass, rolling texture rel. to rigidity modulus 1=20298
- brass, roughness, meas. by adsorption of I¹³¹ 3=13556
- carbon black, graphitized, absorption data 2=10944-5
- clean surfaces prod. in high vacuum 3=23499
- compression, rocksalt type materials 1=20700
- condensation of water vapour, effect on 3=21635
- contact error between repeatedly wrung surfaces 3=25770
- cracks, geometry 0=14045
- cracks on transparent plastics 0=6315
- and crystal epitaxial growth 4=26612
- crystal, study by Berg-Barrett method 3=25660
- crystalline powder specimens, crushed, coarse 4=10573
- crystals, interference microscope for surface examination 0=16828
- crystals, levelling of defects, mech. 2=4484
- crystals, nearly perfect, examination methods review 3=23500
- damage in intermetallic compounds 0=13941
- diamond faces, natural and artificial 4=2015
- diamond, semiconducting, low-energy electron diffraction 4=30877
- diamond, semiconducting, (100) and (111) electron diffr. meas. 4=26704
- dried skim-milk particles 4=2117
- effect on spreading of liquid Hg, for Zn 3=5427
- electrodes, in pulsed discharge, pitting 3=21722
- electron microscope exam., by incineration 4=2105
- electron microscopy, height det. method 0=16368
- electron microscope study 1=2554
- electropolishing unit for electron microscopy 4=29162
- examination technique using friction meas. 4=4657
- Fabry-Perot interferometer, surf. defects invest. 2=5181
- films, ferromag., rel. to mag. anisotropy 2=12778
- films, irregularity effect on optical props. 4=22819
- films, surf. relief meas. by frustrated total internal reflection 2=19493
- fluoride films on UO₂ substrate, roughness, rel. to refractive index 4=11350
- friction, dependence on roughness 0=10277
- glass, rel. to attack by ionic bombardment 3=17810
- glass, effect of intense ultrasound 0=21215
- glass, electron microscope study 0=16339
- glass, electron microscope study 2=849
- glass, polishing effect 3=18373
- glass, polishing processes 1=9160
- glass, residual contaminants 4=13647
- glass, soda-lime-silica, effect of polishing 2=2417
- glass substrates, effect on mag. props. of permalloy films 1=20672
- graphite, cleaved surfaces 3=3261
- graphite and non-graphitic carbon 1=11528
- graphite, orientations due to sliding on Cu 4=17836
- graphitic materials, neutron irradi. 4=29177
- heavy metals, rel. to electron diffraction by reflection 3=18403
- highly plane surfaces, topography, interferometric survey 2=2872
- ice 3=21307
- ice crystals, surface structure 3=18260
- irradi. solids, heterogeneity 1=20660
- imaging and examination, with slow electrons 4=10570

Surface texture—contd

- and iodoform crystal epitaxial growth 4=26612
- isotope layers on cold backing, rel. to structure 4=13682
- longitudinal settings meas., precise method 4=30875
- metal, cavitation effects 4=26705
- metal cold cathodes, effect on emission 0=7150
- metals, effect on ferromagnetic resonance 0=13857
- metals, f.c.c., reorientation by abrasion 2=21453
- metals, grain orientation, Kossel line tech. 2=6863
- metals, rel. to heat radiation 3=7385
- metals, rolled, f. c. c. and b. c. c., slip effect 4=30753
- metals, roughness meas. by adsorption of I¹³¹ 3=13556
- metals, rel. to struct. 2=19074
- microtopography, study using friction technique 4=23549
- mirrors, polishing, for Newtonian telescope 0=165
- metal, heated in air 0=18394
- observation by interference microscopy 1=9360
- ordered structures formed by chemisorption 4=30886
- paper, under rolling pressure 3=13553
- Permalloy films, evap., roughness 2=12658
- pipe roughness, rel. to liquid flow resistance 4=11159
- polishing, electrolytic, Cu in H₃PO₄, diffusion phenomena 3=11351
- polishing imperfections, effect on X-ray specular reflection 4=30007
- polishing machine, acid, for dislocation free surface 4=4992
- polishing, Si, Ge, specimens, for electron microscopy 2=21577
- polishing of small spheres 1=21160
- polyethylene, detachment replica 1=20407
- quartz, defect structures on polished surfaces 4=17837
- quartz, etched and ground 1=20659
- quartz, as freq. standard, energy loss reduction 1=15172
- quartz powders, disturbed surface layers 3=16128
- quartz, prism faces, micro-disk patterns 4=30878
- radiation focusing, by random surface 0=8769
- radioactive solids, electron microscope study 1=20656
- replicas, stripping from metals, Victawet and Na metaphosphate as parting agents 1=7896
- rocksalt, effect of polishing (100) faces 0=8213
- rocksalt, healing of scratches 2=4484
- rough, analysis by Doppler-scattering 3=18374
- roughened spheres, back-scatter light photo 4=30874
- roughness, electrolytic meas. 2=10933
- roughness equilibrium on surface melting crystal 0=21214
- roughness, relationship with specular reflectance at normal incidence 1=4471
- scratches, self-healing, by diffusion and condensation 1=8158
- semiconductors, Group III-V cpds., {111} damaged layers rel. to cold-working 2=23764
- semireflecting, prep. by evaporation, assessment of reflectivity 4=2813
- shadow-casting for electron microscopy 2=23943
- silvered glass, microstructure obs. by multiple reflection interferometry 4=10598
- soda-lime glass, lines, rel. to etching 3=18375
- specimen current image examination 3=23531
- steel, finishing techniques for high-speed mirrors 0=2235
- steel, low-C, during small deformation, effect on X-ray diffraction line intensity 4=17744
- steel, rolling resistance 0=8131-2
- steel, white layers 4=13653
- rel. to surface diffusion of chemisorbed gases 1=2545
- theory using orientation density 0=8146
- topography, interference microscopy meas. 3=14324
- topography obs. by frustrated total internal refl. and interference 4=30876
- vitreous silica, crazing, by He or proton irradi. 4=15507
- water 3=21307
- water, molec. orientation 2=5001
- X-ray diffraction topography of single crystals 4=7659
- X-ray exam. of electrodeposits, diffr. pattern elimination 4=29154
- Ag crystals, effect of annealing, Ar-ion bombard. 3=20435
- Ag, polishing, chemical using Cr₂O₃ in HCl 4=20797
- Ag rel. to stacking faults 1=10279
- Ag, temp. dependence of rolling textures 1=7873
- Ag₂Te evap. films 3=833
- Al, effect on retention of vacancies 1=3660

Surface texture—contd

- Al, evaporated films, specific area 2=15090
 Al, fatigue cracks, slip lines 2=19015
 Al, patterns rel. to cyclic stresses 2=10785
 Al, rel. to stress/strain discontinuities 4=23118
 Al, roughness, meas. by adsorption of I^{131} 3=13556
 Al sheet, cold- and warm-rolled 4=13638
 Al-6% Ag alloy, effect on retention of vacancies 1=3660
 Al_2O_3 anodic layers grown on (100) Al face 4=23565
 Al_2O_3 films, on Al 4=15815
 Al_2O_3 , neutron-irrad., heterogeneity, effects on Kr adsorption 1=20660
 Au, electrolytic polishing and thinning 4=29185
 Au, roughness, meas. by adsorption of I^{131} 3=13556
 Ba, getter film, struct. 2=839-40
 Be, condensed on Mo sheets 1=12593
 BeO, hot pressed, pressure-dependent basal plane texture 3=25648
 Cd single crystals, shaping and polishing 4=30812
 CdS crystals, effect of mech. treatment on absorption spectrum 2=6571
 CdS, electron micr. study 3=8924
 Ce, rolling texture rel. to stacking-fault energy 4=13656
 Co, electrodeposited 4=23346
 Co-CW alloy, abrasion, surface fracture 3=5075
 Cu, acid saw and acid polisher 1=9107
 Cu, effect on contact area under press. 2=14914
 Cu and electrographite, changed during friction 3=6807
 Cu, ion bombarded 4=13671
 Cu sheet, warm-rolled 4=13638
 Cu, stretches, self-healing, temp. depend. 1=9159
 Fe, cold-rolled, primary recryst. texture 3=18353
 Fe whiskers, growth pyramid form. 4=29064
 Fe, white layers 4=13653
 Fe-Ni alloys, corrosion layers 3=20913
 Fe-3% Si, complex recrystallization texture 0=18291
 Ga, strain-free, construction method 3=25772
 Ga(As_{1-x}P_x) single crystal, spiral patterns in {100}, dislocn. in {111}, appl. to lasers 4=29051
 GaSb, (111) and (11 $\bar{1}$) struct. 2=23908
 Ge, clean (100) and (111) surfaces 3=13554
 Ge, electrolytic polishing, optimum conds. 0=21177
 Ge, electropolishing technique 3=23501
 Ge, for epitaxial substrates 3=6880
 Ge films 1=7886
 Ge films, roughness 3=25771
 Ge films, triangular patterns 3=20925
 Ge, study by ion and electron microscopy 4=29175
 Ge and Si, polarization in photoelectric emission, as perfection test 4=14748
 In-Pb alloys, corrosion layers 3=20913
 InSb surfaces cleaned by bombardment and annealing 1=1447
 KBr, melt grown ingots 3=23502
 LiF crystals, etching study 1=9131
 LiF, effect of scratching 0=10278
 LiF, fission fragment damage, surface structures 3=22863
 Mg evap. films, structure determination, ultra-high vacuum technique 0=14046
 MgAl₂O₄, electron microscope study 1=10286
 Mo, ion microscope study at 20°K 4=29178
 MoO₃ crystals, electron micrograph interpretation 0=3286
 NaCl single crystals, surface structure 1=10278
 NaCl, struct. 2=21579
 Ni, rel. to CO and CO₂ chemisorption 2=10980
 Ni, effect on ferromag. reson. line width 3=1172
 Ni, electrodeposited 4=23346
 Ni, electrodeposited, electron micr. study 2=17063
 Ni, effect on emissivity, thermal, and accommodation 4=2126
 Ni films, electroplated, brightness 0=4393
 Ni films, rel. to evaporation and annealing 4=10612-13
 Ni polycrystalline thin-drawn specimens 1=9089
 Ni-Cu mixture, sintering, effect of grain surfaces 4=10593
 Pb, friction, wear rate and polishing 2=23795
 PbS, oxidized films 2=4491
 PbTe, chemical polish 3=6881
 Pt-Al₂O₃ catalyst, 300° 1300°C 3=18367
 Pt-C films, by electron diffraction 3=1370
 Sb vacuum-deposited films 4=10609
 Si abraded surfaces, electron microscope study 3=3353
 Si, clean (100) and {111} surfaces 3=13554

Surface texture—contd

- Si cleaved crystals, electron microscope study 4=7676
 Si, electropolishing technique 3=23501
 Si, examination by C-replica method 4=26706
 Si, low-energy electron diffraction study 2=19106
 Si overgrowths, topography 4=23357
 Si, rel. to abrasion 3=18219
 3% Si-Fe, cold-rolled and annealed 1=1423-4
 Sn, crystallographic features 3=18341
 Sn, friction, wear rate and polishing 2=23795
 Th, rolling texture rel. to stacking-fault energy 4=13656
 Th-Ce alloys, rolling texture rel. to stacking-fault energy 4=13656
 U, UO₂, U alloys, new polishing reagent 2=4441
 UO₂, cleavage surface 1=20385
 W carbide, bonded, pick-up of Cu and duralumin 0=6322
 W, ion microscope study at 20°K 4=29178
 W microcrystals, up to 60 Å diam. 3=3296
 W, ordered surface, thermal rearrangement 3=18376
 W-Mo, 25, 50, 75 at. %, ion microscope study at 20°K, conc. effect 4=29178
 Zn, friction, wear rate, and polishing 2=23795
 Zn monocrystals, surface features 1=15173
 Zn, thermally evaporated cleavage surfaces 4=29179
 (ZnY) (Ba₂Zn₂Fe₁₂O₂₂) ferrite, polishing effects on line-width and high-power props. 4=7316

 plastic deform., dislocation var., effects of temp., struct. 4=28985
 plastic flow transition temperature 3=11163
 plastically deformed, stresses, temp. depend. 4=17734
 point defects, recovery meas. 2=23151
 positive ion emission, secondary 4=11719
 reaction diffusion of Si 2=23205
 reflection, light, far u.v. 4=22877
 resistivity rel. to plastic deform 3=13037
 resolidified drops, voids 1=20631
 secondary electron emission, 1 MeV proton bombardment 3=24344
 secondary emission, during incandescence, under K ion bombard. 0=15059
 secondary emission, He, H and A ion bombard. 0=12632
 secondary emission, under ion bombardment 0=19806
 secondary emission, positive ion bombard. 0=9078
 secondary ion emission 4=8844
 single crystals, prep. for critical field meas. 0=8955
 sound velocity, effect of high mag. field 3=8356
 specific heat near supercond. critical temp. 2=19818
 specific heat, 1200°-2400°K 3=10596
 specific heats and frequency of lattice vibrations, theory 4=25843
 sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
 sputtering by 45 keV ions, collection formula 2=3096
 sputtering ratios for A^+ bombard. 0=9110
 sputtering and scattering on bomb. with Cs^+ 0=9107
 stacking faults, X-ray diffraction study 1=17547
 supercond. wires, quantum interference effects 4=24499
 superconducting, absorption, u.s., long., 45-340 Mc/s, and $2\epsilon_0$ 4=16355
 superconducting critical field 1=11879
 superconducting critical temp., effect of imperfections 1=16200
 superconducting rel. to defects 2=9489
 superconducting energy gap, by electron tunnelling 3=333
 superconducting, energy gap meas. 2=11569
 superconducting, energy gap meas. 4=14531
 superconducting energy gap, tunnelling meas. 4=16374
 superconducting energy gap, ultrasonic meas. 4=2922
 superconducting, far-i.r. absorption 0=14933
 superconducting films, critical fields transition temps., meas. deposition method effect 4=29838
 superconducting films, energy gaps 4=14530
 superconducting films, getter sputtering for prep. 4=14231
 superconducting, mag. field penetration depth 4=27437
 superconducting, pair correlations 4=413

Tantalum—contd

- superconducting, pressure and volume effects, crit. mag. field, Fermi surface 1=258
 superconducting Ta-Nb mixed crystals, trapped magnetic flux in 0=7027
 superconducting transition, induced by mag. field 0=2292
 superconducting, transition, liquid He level indicator 2=7487
 superconducting transition, purified specimens 0=16952
 superconducting transition, stress effects 2=7518
 superconducting transitions, stress effects 1=11885
 superconducting, transverse u. s. atten. for $q/\lambda < 1$ 4=6729
 superconductivity, critical field curves 0=16951
 superconductivity, films, var. substrate temp., annealing 4=18603
 superconductivity, intermediate state 0=10848
 superconductivity transition temp. in high-purity metal 1=7000
 superconductivity type change with temp., and purity 4=18604
 surface coated with Cs, Sr, Ba, Th, work function variation 2=1474
 tensile strength, 0°-2300°C 1=20378
 tensile yield stress, effect of strain-rate 3=1237
 thermal cond. normal and supercond. states 0=10843
 thermal cond., 0.2-1.2°K 2=8183
 thermal cond., normal, supercond. states 2=6292
 thermal diffusivity meas., 1300°-1650°C 4=6754
 thermal expansion, linear coeff. 2=23847
 thermal expansion, low temps. 2=7439
 thermal expansion at low temps., expt. 4=17369
 thermal expansion, 1.5-12°K, electronic and lattice contri., and Grüneisen parameters 4=17370
 thermal props., 1000°K to melting pt. 1=17416
 thermionic emission in Cs and Rb vapour 2=207
 thermionic emission, in Cs vapour, low coverage, discontinuity 3=14624-5
 thin foils domain patterns due to interstitial impurities 4=22567
 twinning, after impact deformation 0=18294
 vacuum-arc evaporation 1=6688
 welding 3=18685
 work function of electron emission during deformation 4=8796
 work function, photoelectric meas. 4=8794
 work function of (110) face of Ta in Cs vapour 4=11686
 X-ray diffr. from layer faults 2=23840
 X-ray L spectrum, emission 2=6588
 yield and flow stress meas., 4.2-373°K, and thermally activated flow mechanism 4=28970-1
 Young's modulus data, rel. to temp. 4=30788
 CO adsorbed, field emission 3=14623
 in Ge, diffusion and solubility, temp. and elec. cond. depend. 0=1599
 Ta-anodic oxide film-metal counter-electrode, dielec. props. 3=17930
 Ta atomic hyperfine struct. quadrupole coupling 2=16484
 Ta⁷⁷, X-ray spectra, L emission, quadrupole and forbidden lines 3=12766
 Ta/Rh-W thermocouple, up to 2800°C 0=7006

Tantalum compounds

- anodic oxide films, structure 3=3355
 anodic oxide films, p-i-n junction 0=15962
 borides and carbides, thermoelec. power with Cu 1=12465
 crystal structure comparison with corr. perovskite type cpds. 4=4619
 oxide anodic, films, as capacitors, review 4=2934
 oxide diodes, electrical properties 4=20395
 oxide films, anodic, dielec. props., effect of heat treatment 4=10099-100
 tantalates, of Mn, Co or Ni, solid solns. based on BaTiO₃ 0=7979
 (Fe,Mn)(Nb,Ta)₂O₆, crystal structure 1=11571
 M²⁺ tantalates, photoluminescence, self-activated 4=26244
 Ta arsenides and monophosphides, crystal structure, 4=4517
 Ta borides, carbides and nitrides, elec. props. 1=3707
 Ta carbide, mechanical, structural, electrical and magnetic props. rel. to C content 4=13448
 Ta oxide anodic films, absorption spectra 2=698
 Ta oxide films, anomalous capacitance 1=11335

Tantalum compounds—contd

- Ta oxide thin films, optical consts. and thickness meas. 2=21864
 TaB, crystal structure, rel. to similar types 3=18338
 Ta₂B_{1-x} (B = Re, Ru, Os, Rh, Ir, Pd, Pt) superconductivity and paramag. susceptibility 2=2961
 TaB₂, quadrupole bond, n.m.r. meas. and calc. 3=11121
 TaB₂, thermoelectron emission 3=7631
 Ta-C, electrical resistivity, rel. to composition 3=25368
 TaC films, critical fields, transition temps. meas. deposition method effect 4=29838
 TaC, heat content, 1296°-2843°K meas. 4=1397
 TaC, lattice parameter rel. to C content 2=2388
 TaC, prep. and props. 2=2448
 TaC, pure and with 1% Co, supercond. 2=11568
 TaC, supercond. transition, rel. to composition 2=2962
 Ta-C system, phase constituents rel. to composn. 4=13463
 TaC, thermal decomposition 0=10349
 TaC, thermionic emission, 1300°-1900°K 3=16974
 TaC, W diffusion 3=25295
 TaC, work function meas. 2=22160
 Ta₂C, supercond. invest. down to 1.98°K 3=7406
 TaC-NbC, supercond. crit. temp. composition var. 4=21427
 TaC-UC, thermionic emission 2=22249
 TaCl₅, mol. potential consts., calc. 4=9724
 TaCl₅, potential field and force constants 0=1501
 Ta₂Cl₁₀⁴⁺, bonding 3=8281
 Ta₂D, neutron diffr. data 2=4421
 Ta₂H, bonding, slow neutron scatt. study 2=547
 Ta₂H, heat capacity and residual entropy 2=2054
 Ta-H system, internal friction 3=18168
 Ta-H system, thermodynamics 2=19026
 Ta-Ir system, phase diagram 4=13502
 Ta₂M₄O₉ (M = Mg, Mn, Fe, Co or Ni), crystal and magnetic structure 1=2535
 Ta-N dilute solid soln., phase instability 2=2413
 TaN films, critical fields, transition temps., meas. deposition method effect 4=29838
 Ta-Nb crystal, superconducting, time effects 4=16375
 Ta-Nb mixed single crystals, thermal cond. normal and supercond. rel. to comp. 4=15438
 Ta-(55 at.%)Nb, superconductor, second kind 3=19122
 Ta⁴⁵-Nb⁵⁵, supercond. crit. current, long. mag. field effects 4=18605
 Ta-Ni, structure of W₂Fe₇ type 3=16093
 Ta-Ni supercond. wire, critical currents and magnetizations 4=21428
 Ta-O alloy, dilute, strain aging, dual process 4=7460
 Ta-O, anelastic piezoresistance, stress-induced ordering 4=12847
 Ta-O system, high-temp. study 0=12095
 Ta₂O₅, absorption spectrum and photocond. 1=12498
 Ta₂O₅, α and β forms, dielec. const. and dissipation factor, 77° to 373°K, 100 c/s to 100 kc/s 4=12964
 Ta₂O₅, anodic films, optical consts. meas. 4=22896
 Ta₂O₅, anodic films, photo-induced growth 0=10337
 Ta₂O₅, conductivity, elec., induced by γ-rays and neutrons, time var. 4=20402
 Ta₂O₅, crystalline film, structure 1=20674
 Ta₂O₅ film formation, effect of Frenkel defects 1=20675
 10 Ta₂O₅·90 M₂O₅ (M = Nb, Ta), tetragonal phase 4=26666
 Ta₂O₅, p-i-p junctions, rectification and e.m.f. 3=10849
 Ta₂O₅, Schumann u.v. absorption spectrum 1=17893
 Ta₂O₅, in Ta-Ta₂O₅-Au diodes, electron transport mechanisms 3=6611
 Ta₂O₅, use in tunnel-emission devices 1=8962
 Ta-Pd alloys, intermediate phases and solid solns. 4=7513
 Ta-Re alloy, paramag. susceptibility 2=4209
 Ta-Re, paramag. susceptibility, rel. to temp. 3=999
 Ta-Rh, constitution diagram 4=15744
 Ta-Rh [Ir, Pd, Pt], intermediate phases, structure 4=23280
 Ta-Sn-Nb₃Sn, superconductivity 1=6999
 Ta-Ta₂O₅ electrode, irradiated 2=3969
 Ta-Ta₂O₅-Al thin film cathodes, cold emission 4=11690
 Ta-Ti superconducting critical current, var. with mag. field and composition 4=11484
 Ta-Ti wires, supercond., critical currents 3=14454
 Ta-W alloy, paramag. susceptibility 2=4209
 Ta-W, paramag. susceptibility rel. to temp. 3=999
 Ta-Zr system, investigation 0=6384
 Ta_{0.8}Zr_{0.2}C, thermionic emission, 1300°-1900°K 3=16974

Teaching

AAPT -- AIP Regional Counselor Program (USA) 3=6
 AAPT annual citations 4=18008
 acceleration carts and track 1=5247
 acceleration of gravity apparatus 3=11658
 acoustic waves, teaching apparatus 2=11449
 acoustics, methods of attracting physics students 3=9319
 Advanced Placement Programme, in U.S.A. 0=4918
 air suspension apparatus for measuring resolution of forces 0=4965
 alternating current experiments 0=2294
 American Association of Physics Teachers, Oersted medalist's speech 4=18007
 analogue display of orbits 2=19373
 angular motion, large-scale demonstration 2=13292
 anisotropic defects in solids, stress effects 3=22695
 anthropological angle 3=23724
 apparatus for hexamethylenetetramine crystal growth 3=23400
 apparatus for three lecture demonstrations 3=3703
 architecture students, physics course 0=4920
 astronautics 3=11660
 atomic constants, laboratory experiment for measuring 0=860
 atomic electron-nucleus interaction, simple deviation 2=22889
 atoms and radiative processes, quantum-mech description 3=12747
 beginners physics, use of digital computer 4=16001
 β -spectrometer demonstration 0=1161
 for biologists, advanced physics courses 1=15589
 biophysics in medical curriculum 1=4139
 Bohr's atomic model, method of presentation 2=6082
 Bragg's law, optical demonstration 1=9484
 calculus, changes in undergraduate courses 3=5315
 calculus-physics course 0=26
 calculus, recent developments 2=13235
 Carnot cycles, diagram for 3=21639
 centripetal force apparatus 0=6725
 centripetal force apparatus 3=11655
 centripetal force, conical pendulum 2=7156
 centripetal force, student experiment 2=13289
 chain reactions, analogy with vibrating systems 3=4680
 circuitry and nonlinear elements 0=1094
 circuits for meas. of mag. fields, inductance and capacitance 2=13519
 citations for distinguished service 1=10403
 cognitive development and readiness for high school physics 2=2
 collision expts. in shadow projection 1=12835
 coma demonstration expt. 2=90
 commission of College Physics, progress report 4=18002
 Commission on College Physics, review conference 3=5314
 commission on College physics (USA), progress report 3=3
 Compton effect, simple demonstration expt. 4=11955
 conference on physical science courses 4=18001
 conference on physical science courses for non-science students, talk 4=18006
 conference on Physics education 1=4228
 conservation of momentum, demonstration expt. 2=13293
 cosmic-ray physics, coincidence telescope 0=11263
 covalently bonded atoms, forces between them, explanation for 6th form students 4=17276
 creative thinking and experimenting 0=6639
 cryophysics, textbook 0=14912
 current practices in general labs, in U.S.A. 1=1671
 curricula for undergraduates, conference 2=7096
 curve fitting by analogue computer 2=4916
 cyclotron, Iowa State Univ. exptl. programme 2=11741
 cyclotron, Iowa State Univ. 1.5 MeV, undergrad. 2=11740
 demonstration characteristics tracer for valves and transistors 1=5405
 demonstration lectures, conference 0=14483
 deuteron binding energy determination, student method 1=13523
 dielectric materials, basic aspects 4=12952
 dielectric and metal films, optical properties, demonstration 0=16868
 diffusing atom jump freqn., dynamical theory 4=4069

Teaching--contd

dispersion relations, introductory treatment 4=30175
 "dynamation", defin. and proposal of word 3=3775
 dynamic hard-sphere model 0=8690
 dynamics of impact ball apparatus 0=19031
 dynamics and kinematics, vertical circle apparatus 2=11310
 e/m for electron, determination, apparatus 1=10877
 e/m. for electrons, apparatus 1=484
 e.m. field of ferromagnetic transformer 0=17069
 educ. of 19th century scientist 0=856
 education, international conference(1960) 1=4228
 education of physicists in Austria and Israel 1=4229
 education of physicists in Sweden 1=4230
 electric displacement current, interpretation for students 4=3098
 electric field of charge moving in medium 3=21938
 electrical dust figure projection 2=9676
 electricity and magnetism, first-year 3=12038
 electrification of conductors 0=234
 electromagnet accessories for student experiments 2=13652
 electromagnetic induction 3=14737
 electromagnet for student's lab., construction 1=3038
 electromagnetic waves 0=17093
 electromagnetism for schools, MKSA units 2=20105
 electron diffraction, lecture demonstration 3=4201
 electron velocity distrib. in thermionic emission 4=11695
 electronic counting circuits, with electronic display 1=5406
 electrostatic and Fermi potentials, with applications 3=341
 electrostatic field bet. parallel plates, meas. 3=14502
 electrostatics, problems 0=19589
 element of discovery in lab. work 4=27008
 elementary school science 2=1038
 emission spectroscopy, as undergraduate subject 4=29751
 engineering curricula, revision 0=857
 errors in measurement, theory 4=2518
 exponential decay, by water column half-life 0=18897
 Fabry-Perot interferometer and its use 3=260
 Faraday's and Ampere's laws, rel. to Maxwell's eqns. 3=14738
 Feynman graphs method, introduction 4=11867
 films for demonstration expts. 2=17335
 films for physics students, list of 450 1=5184
 foreign lecture programme, Temple University (1960) 1=4227
 Foucault pendulum, suspension construction 1=12836
 in France, Argentina and England 0=3430
 friction, Resource Letter F-1 4=7397
 fundamental particles, intrinsic mag. moment 1=12045
 γ -ray attenuation, student expt. 1=5704
 general physics course, time distribution 1=5183
 graduate examinations 0=22
 graduate training of eminent physicists, top institutions 3=21190
 gyroscope, demonstration 3=11741
 gyroscope, elementary analysis 1=1719
 gyroscopic precession 4=27007
 Hall effect magnet 1=351
 high school physics courses, evaluations 0=24
 high-vacuum kits for students 0=19241
 history of physics 4=27005
 homopolar motor, construction and theory 1=13158
 hydrodynamic flow demonstration 0=917
 importance of correct questions 0=28
 independent study course with computer 3=11657
 institutions not granting Ph.D. (USA) 3=5
 instruction films, prod. at university 2=13233
 interference, from 2 slits, film and protractor model 0=174
 interrelationship of physical quantities 0=4924, 18899
 introductory laboratory experiments in physics 1=12792
 introductory laboratory practice 2=7105
 introductory physics lab, error analysis 1=1670
 ionization chamber for demonstration 0=1229
 ionization chamber for student use 2=243
 Kepler's third law, without calculus 3=13850
 Kepler's third law without calculus 4=29570
 kinetic energy demonstration 1=15766
 kinetic theory demonstration apparatus 0=16730
 kinetic theory of gases 3=14207
 Kundt's tube, new expts. 2=13414

Teaching—contd

LCR circuits 0=7049
 laboratory examinations, nonsecret 0=4922
 laboratory work, performance study at Montana State College, (1959) 1=15590
 Laplace operator, physical meaning 3=21192
 Laplace operator theorems proof 4=16010
 lasers, injection and optically pumped, power and energy output 4=11818
 launching tube for projectile motion expts 3=3777
 laws of classical motion 1=12833
 lecture demonstrations 0=4921
 lecture demonstrations 1=2673
 liberal arts colleges' production of doctoral candidates 2=17334
 liquids, magnetic susceptibilities, Quincke method 3=17016
 Lorentz transformation, deriv. in one dim. 4=5028
 Lorentz transformation in undergraduate curriculum 3=14004
 magnetic field measurement, low, by e.s.r. 3=5807
 magnetohydrodynamics, review lecture 4=30035
 masers and optical pumping, resource letter 4=27010
 mass spectrometer, simple type 0=5362
 mathematics, remedial programs for weaker students 4=18004
 matrix rotation derivation 4=2522
 Maxwell top, with air bearing 2=13291
 Maxwell's displacement current, symmetry arguments 4=656
 Maxwell's eqns., text-book derivations 3=471
 measurement of Fermi energy by positron annihilation 3=25263
 mechanical equivalent of heat apparatus 1=1852
 Mercury reservoir, demonstration of gas props. 3=151
 microscope, Abbe's theory, demonstration apparatus apparatus 2=9374
 modern physics, laboratory course 0=17129
 moiré patterns, demonstration 2=9404
 momentum experiments, air-suspended pucks 0=16656
 momentum expt., impact of trolleys 1=12834
 Mössbauer effect, resource letter 3=6143
 motional electric fields, demonstration 0=17067
 Mott scattering, classical approach 1=15698
 n.m.r. absorption apparatus 1=10794
 National Science Foundation, institutes 0=4919
 nature study in physics teaching 1=12790
 neutrons diffusion length in water, student meas. 2=22530
 Newtonian mechanics 1=11717
 nonlinear ruler 2=13298
 nuclear engineering 2=5993
 nuclear fission, with coloured lights analogue 1=3470
 nuclear laboratory 2=1616
 nuclear physics, ratemeter and valve voltmeter 0=17174
 nuclear reaction experiments 2=14129
 nuclear reactor, at Iowa State College 0=13346
 nuclear reactors, subcritical, as college facility 0=5814
 Oersted Medal (1962), presentation to F. W. Sears 2=13230
 Oersted medalist, 1962 3=21182-3
 "open-ended" expts. for physics majors 3=23725
 optical Doppler effect, lab. demonstration 2=19670
 optical image formation, Abbe theory 3=24009
 optical phenomena, photographic demonstration 3=257
 optical physics research in a small college 4=5351
 optical pumping apparatus 0=17693
 optical scientists training, and scientific manpower problem 4=14323
 optics, at École Supérieure d'Optique 1=1803
 orbital stability, demonstration 2=17389
 p-n junction detector, use 3=4298
 Pakistan summer institute 1=12789
 particle track visualization, dust-track model, with Pb and alnico slugs 0=5458
 permanent magnet field, meas. 1=13147
 Ph.D. physicists, baccalaureate origins 0=25
 Ph.D. physicists, undergraduate training 0=23
 philosophy of physics 0=6638
 philosophy of science, cooperative teaching in small colleges 1=2675
 photoelectric effect experiment for undergraduates 1=17788
 photon and electron high-energy physics, review lecture 3=14932

Teaching—contd

physics building for Univ. of California 3=13993
 physics course for students in humanities 3=4
 physics curriculum for schools, 3=11652
 physics education conference, Paris (1960) 1=5181
 physics instructional films, list 2=11238
 physics, lecture demonstrations 1=2673
 physics in a toy boat 3=9638
 physics, U.S. distinguished service citations 2=11239
 Pierre S. du Pont Building, Swarthmore College 1=15587
 plasma physics, bibliography for 2=9562
 plasma physics, outline of a course 4=11006
 Pohl, 1959 Oersted medalist 0=14482
 Poland, physics education 1=15588
 polymers, mech. props. rel. to structure 4=13698
 potential fields, demonstration expt. 0=1090
 power supply and amplifier for student lab. 3=346
 precession 0=4974-5
 prediction of success for high-ability physics students 4=11004
 pre-school physics 1=12788
 problems of four-year colleges 1=12791
 projectile eqns. in convenient form 1=11731
 projectiles, components of motion 3=14083
 proton e/m, student determination using omegatron apparatus 1=3187
 punched cards for personal ref. files 0=18896
 quantum-mechanical scatt. theory 3=3755
 quantum mechanics, intermediate textbook 4=16031
 quantum and statistical aspects of light, resource letter 3=11877
 quantum theory, Bohr orbital conditions rel. to Planck osc. levels 4=27056
 radiation, Pt wedge blackboard 2=5212
 radioactivity expt. using activities filtered from air 2=3493
 relativity and parallel wires 2=1560
 relativity, special, length contraction and time dilation 1=11699
 research programmes in U.S. non-Ph.D. granting institutions 1=2676
 research in U.S. undergraduate colleges and its sponsorship 1=2674
 ripple tank 2=2688
 ripple tank for wave phenomena demonstration 1=4231
 rubber membrane model, for demonstrations 0=16561
 satellite orbit dynamics, guide to literature 3=11610
 scattering of particles, Levinson's theorem 4=30183
 schlieren system 1=12998
 school auditorium, acoustics 3=14299
 school classrooms, acoustic problems 3=14298
 school music departments, acoustics 3=14300
 school sound installations 3=13994
 schools, acoustic problems 3=14296
 schools, acoustic problems, effect of changes 3=14297
 secondary school physics courses 0=6636
 semiconductor devices, lab. assembly and expts. 2=10498
 semiconductor physics, basic concepts 4=15526-7
 semiconductor, Resource Letter Scr-1 4=20340
 semiconductors, lab. meas. method 4=12878
 senior lab. course at Dartmouth college 2=17333
 simple harmonic motion, demonstration 2=13290
 spark chamber, for cosmic-ray demonstrations 3=22221
 special relativity 2=13250
 special relativity, bibliography and teaching aids 2=13251
 special relativity, force transformation laws 3=21217
 special relativity, geometrical introd. 3=34
 special relativity, problem 0=16573
 specific heat measurements, all-glass apparatus 1=2911
 specific heats ratio determination in gases 1=6987
 spectrum analysis, instruments for students 2=22038
 sphere collision demonstration 0=3475
 stroboscopic tachometer, uses 3=3905
 supercond. transition temps. of alloys and cpds. 1=11881
 superconductivity, Resource Letter Scy-1 4=11455
 superposition theorem, demonstration 2=17742
 surface tension 1=129
 teachers, college physics, study programs 4=18005
 teaching at nursery level 1=12788

Teaching—contd

- team approach to education 1=8034
- television courses 0=4916
- testing for physics achievement 0=4917
- Texas University building extension 1=54
- textbooks, British, on elec. and mag. 2=19821
- thermal diffusion in rod 3=11964
- thermal physics, student textbook 4=8084
- thermodynamic diagram 1=13028
- thermodynamics formulae derivation 0=16927
- thermoelectric generator for demonstration 1=7021
- through television 0=6637
- transition from student to research apprentice 3=23726
- 2-dimensional motion demonstration 3=9383
- Ukrainian higher educational institutions, physics research 3=18686
- uncertainty principle, new applications 2=9140
- undergraduate college research in U.S.A. and its sponsorship 1=2674
- undergraduate curricula for physics majors 3=11656
- undergraduate curricula for physics in sample of U.S.A. institutions 1=5182
- undergraduate curricula, Princeton conference 4=18003
- undergraduate recommended mathematics syllabus 2=19362
- undergraduate research projects 3=3702
- unit systems, graphical representation 1=10405
- vacuum techniques, diffusion-pumped system 1=2791
- vertical ballistic pendulum apparatus 3=23819
- virtual work, in soln. of problems 0=5006
- visiting foreign staff project, at Temple University 0=3429
- X-ray diffraction, light-optical analogues 1=7857
- X-ray diffraction, reciprocal lattice concept 3=5095
- X-ray goniometers, safe universal mounting system 1=20457
- X-ray physics, use of commercial spectrometer 1=1950
- X-ray spectroscopy 4=14845
- X-ray tube, lab. type, construction 1=10754
- X-Y projector plotter 2=13232
- Zacharias, Oersted metallist (1960) 1=8033
- H atom structure, Schrödinger eqn. solution 2=10195
- I^{128} , β -spectrum 2=1837

demonstrations

- (subheading introduced in 1963)
- air viscosity, sophomore-laboratory expt. 4=21161
- amplification, travelling wave, mechanical analogue 3=21191
- angular momentum conservation 3=5398
- beats, interference pattern 3=23985
- Berkeley Physics Laboratory 4=18009
- billiard-ball collisions 3=11654
- binding forces, demonstration model, using potential superposition 3=25036
- Brewster's angle determination apparatus 3=11942
- Brownian movement of galvanometer by optical lever 4=5369
- centre-of-mass, photographs 3=11739
- cohesion plates, correct description of principles 4=16002
- Compton effect 4=11956
- convection in free fall, correct description of principles 4=16002
- crystal structure, module building blocks 3=11653
- crystallography, molecular magnetic models 4=4513
- cubic crystal, spherical projection demonstration model 4=4566
- diffraction, Fresnel, using 3 cm e.m. waves 3=18687
- diffusion, H_2O , in air, meas. 3=21425
- Doppler effect, acoustic 4=8003
- e.m. oscillations, cavity resonance, geom. perturbation effects 4=19210
- elasticity, rubber 4=7367
- electrolytic conduction, large scale 4=29222
- electromagnetic fields, effects 3=5813
- electroscope, large, demonstration 3=12062
- exhibits in 1964 at Physical Society 4=21001
- ferromagnetic Curie temp., by e.m. induction 4=7225
- Fourier transform zeros, rectangular pulse 3=9320
- Fresnel diffraction 4=18420
- γ for various gases, temp. varn. 4=27217

Teaching—contd

demonstrations—contd

- Hall effect in metal films, lab. expts. 4=4112
- harmonic oscillations 4=8003
- harmonic oscillations, addition, simple demonstration 4=8283
- hollow spheres with conducting inner surfaces for e.s. experiments 4=21445
- ice, refractive index meas., from lens focal length 4=17567
- impact, with plastic croquet balls 3=95
- interference, two slit sources, using 3 cm e.m. waves 3=18687
- interferometric obs. of flat surfaces and Edser—Butler bands 4=27326
- interferometer, Fabry—Perot, Russian 4=8449
- kinetic theory of gases, thermal conductivity 4=5229
- laboratory techniques course, pass and Hons. degrees 4=14004
- lattice dynamics, use of linear air track 4=6698
- Lenz's law, electromagnetic levitator 4=5752
- light vel. meas. by μ_0 , ϵ_0 det. 3=5508
- liquids, dielec. meas., test cells 4=11490
- Lissajous figures 4=8003
- Lorentz transformation, illustration 3=23748
- magnetic resonance 4=19245
- magnetic resonance model 3=14736
- magnetism, inverse-square law 3=5803
- mass spectrometer, inexpensive laboratory construction 4=5723
- mechanics, motion of coupled systems, lab. exp. 4=11131
- Michelson and Jamin interferometers, suitability 3=19013
- moment-of-inertia apparatus, slow-motion 3=21282
- Mössbauer effect, demonstration apparatus 4=12576
- n.m.r. expts. on liquids and solids 3=25583
- neutron diffusion in polythene, meas. 4=3416
- nuclear chain reactions, mousetrap model 3=5316
- nuclear magnetic resonance, Co^{59} , by grid dip meter 3=6766
- nuclear reactor exponential column flux, radial mode separation 4=6446
- nuclear reactor, German 4=15252
- nuclear reactor, Scottish 4=15251
- optics, use of laser 4=18378
- particle mechanics, using simple spring gun 3=5399
- particle scattering expt. 4=2502
- particle \rightarrow wave approach transition 4=27006
- pendulum, physical, inexpensive construction 4=14006
- polarized light, refraction and reflection, experiments 3=19029
- ponderomotive forces, demonstration, using soap film 4=8598
- potential barriers, penetration 4=2503
- practical work, library of experiments 4=11005
- radiation pressure, by torsion pendulum resonance 4=5356
- radiotelescope, low-cost 4=23932
- relativistic electrons, speed and kinetic energy 4=21023
- relativity, Fitzgerald contraction model, stick drawn across elastic sheet 4=14036
- relativity, special, Fitzgerald contraction 4=5029
- scalar, mechanical binary 4=27009
- shock waves 3=9546
- significant figures, demonstration 4=14005
- soil, flow of water, Darcy's law 4=24002
- solder-glass techniques 4=18010, 23990
- Soviet lecture demonstrations, translation project 4=5003
- special relativity, vel. transformation, geometrical demonstration 3=23747
- thermodynamic partial derivatives, rubber-band expt. 4=2501
- time switch for corridor demonstration 3=7083
- ultrasonics, high-intensity, instruments 4=8318
- vacuum, practical course 4=18255
- vacuum technique, cheap construction methods 4=18256
- velocity, light, finite value 4=21470
- velocity meas., stroboscopic, bullet 3=21286
- viscosity, mean free path, air, meas. 3=21425
- wave effects, by microwaves 4=8004
- Young's modulus apparatus with hydraulic amplification 4=27011
- Ge conductivity expts., tension and illum. effects 4=4150
- K atoms in A, m.f.p. det. 3=6367

Technetium

- decay of Tc^{99m} , in Tc metal effect of compression, calc. 0=5718
 Knight shift and quadrupole interaction 2=6707
 melting point, determination 0=20725
 melting point, and periodicity for transition metals 3=7386
 in sun, possible formation 2=9071
 superconducting transition temperature 3=334
 Tc^{99} , n.m.r. and Knight shift 2=12836

Technetium compounds

- pertechnetates, $AgTcO_4$ and $NaTcO_4$, cryst. struct. 2=23854
 Tc hexafluoride, thermodynamic functions, mean vibration amplitudes 4=1280
 Tc , superconduct. transition temps. 1=11881
 $Tc-Al$ phase diagram 3=20882
 $TcAl_6$, unit cell meas. 3=5115
 $TcAl_{12}$, crystal structure 4=7627
 $Tc_2(CO)_{10}$ crystals, unit cell and space group 3=3299
 TcF_6 , mag. susceptibility 2=16889
 TcF_6 , vibr. spectra 2=14276
 TcO_4^- , aqueous, i. r. and Raman spectra 4=26213
 TcO_4^- , diffusion coeff., by conductivity, N/10 soln., 25°C 3=16609
 $Tc-V$, Tc^{99} and V^{51} n. m. r. 2=12836

Telescopes

- achromatic anamorphic, glass selection 4=21288
 adjustment to photodetector with lens combinations 4=16218
 alignment telescope 2=734
 anamorphic, achromatic design 4=8404
 anamorphic, four-lens, thin lens aberr. 3=7309
 anamorphic, four-lens, thin lens design 3=21529
 anamorphic, thin lens aberrations 2=7325
 anastigmatic, for exact meas. 2=9377
 angular magnification meas., interferometric method 2=13442
 binocular, parallelism tolerances 0=6921
 binoculars, contrast transfer function and other meas. 2=101
 binoculars, contrast transmission function meas. 1=6950
 Cassegrain, corrected, for use with vidicon tube 4=16220
 Cassegrain, new system, for Caracas observatory 1=17991
 contrast transfer function, meas. 1=1811
 correlation of loop prominences with sunspots 1=9277
 eye location for wide-field large-exit-pupil system 1=2849
 eyepiece with large field of view 1=18583
 eyepiece micrometer, screw value, temp. coeff. 2=24072
 Galilean, telephoto lens treatment 0=8778
 geodetic, effect of achromatism 3=14328
 image interpretation, enlarged retinal image, psychological approach 0=19383
 instrumental errors, in photographic zenith telescope 2=24071
 low light level, modification for high sensitivity 4=24341
 magnification, rigorous calc. 1=11832
 for mica optical angle meas. 1=10584
 Newtonian, cutting and polishing mirrors 0=165
 optical system for large telescopes 1=4445
 optical systems, moderate power, design 4=14342
 quartz-skeleton mirrors design 4=16219
 radio transit, steerable in azimuth 3=9260
 resolving power, rel. to 2 point sources of differing intensity 3=3873
 satellite telescope for soft X-ray astronomy 1=8
 setting-up on equatorial mounting 1=18584
 for vertical distance meas. 4=3
 wide-angle tracking device 0=19388

astronomical

- See also Radioastronomy
 astronomical, future design problems 1=15399
 balloon borne, Stratoscope II for planetary observation 3=16350
 Bergedorf Schmidt, as astrometric instrument 0=12241
 design, Schmidt camera, Baker type, and Cassegrain, glass 3=11487
 distortionless, aplanatic with concave primaries 4=13875
 double star meas., adaptation 2=13141
 for extragalactic surveys, design 3=7042-3
 for far i.r. spectral region observations 4=26893
 fork-mounted, flexure effects 2=21682
 use of Fresnel zone plate in far u.v. and X-ray region 1=4448

Telescopes—cont'd**astronomical—cont'd**

- γ -ray telescope, high energy 3=21146
 Hale 200 in., discrimination between world models 1=5127
 images of stars, detection limits rel. to image structure 4=10800
 Kitt Peak, auxiliary optical systems 3=9143
 large, limitations due to atmosph. turbulence 3=7012
 Lick 120 in. reflector, electronic camera 1=2591
 Maksutov-Cassegrain flat-field optical systems 1=4446
 Maksutov-type 4=2332
 mirror instrument at Caracas Observatory 2=13088
 mirror, parabolic, construction and examin. 2=9045
 mirrors, heat effects, and choice of material 4=13877
 objective, aplanatic 4=26892
 objective grating, use 4=23332
 optical surfaces, effect of irregularities 2=13090
 photoelec., rel. to search for ultra-short period variable stars 4=17980
 photometer, photoelec., with electronic refrigerator 2=11098
 polar axis adjustment 0=10470
 polarization meas. 3=7019
 polarization meas., errors, 4-parameter effects 3=7015
 quartz, mirrors, epoxy-resin bonded 4=5364
 radio telescope, theoretical limitation in sky brightness det. 1=18143
 radio telescope for 7.9 m wavelength 1=12782
 radiotelescope, 600 ft., West Virginia 2=15398
 radiotelescope, 22m, at Lebedev Phys. Inst., antenna parameters 2=1017-8
 reflecting, diffraction patterns due to obstructions 0=10471
 reflecting, Lick observatory, 120 in. mirror 0=14373
 reflector, astrometric, 152 cm 3=7009
 reflectors, instrumental polarization, meas. and corrections 0=18612
 refracting objectives design, review 3=9141
 Ritchie-Chrétien, primary focus corrector 4=23831
 Ritchey-Chrétien 4=13876
 satellite telescopes 0=14372
 satellite tracking, automatic, theory 1=18230
 Schmidt, convertible to Cassegrain type 1=2587
 Schmidt, photographic photometry 1=9280
 Schmidt telescope, 53 in. mirror 2=6970
 Schmidt telescope, spectrophotometric work 2=6968
 seeing-monitor triggering for facular granule life-times 1=7986
 solar, design and construction 3=7016
 space telescope, u.v., resolving power 2=4712
 Tauntenburg-Jena, 2m mirror universal apparatus 1=17992
 travelling filament control 2=21687
 Wollaston polarization photometer, for 82 in. McDonald telescope 0=16515
 193 cm C.N.R.S. telescope, Haute-Provence 1=7
 Se evaporated films for optical filters 1=9491

Tellurium

- absorption spectrum, u.v. 1=7709
 atomic beam mag. reson. nuclear spins 2=3461
 atomic spectrum, isotope shift and h.f.s. 1=19594
 atomic spectrum, isotope shifts in Te II 4049 A line 1=9909
 atomic structure, 3=12755
 atoms, structure and spectrum 1=4897
 atoms, $Te^{203-205}$ isotopic shift 4=12346
 band structure in hexagonal crystals, exptl. 4=4019
 band structure, rel. to transport phenomena 2=16628
 carrier lifetime and recombination processes 2=23409
 carrier mobility and elec. resistivity, effect of annealing 1=3773
 carrier recombination and trapping 0=6143
 crystallization and Peltier effect 1=20438
 crystals, electrical noise from thermal or optical excitation 4=12915
 crystals, method of growing by extraction from melt 2=21484
 density, temp. var., from lattice parameters, decrease on fusion 4=17819
 diffusion and elec. migration of Tl , meas. 3=17791
 diffusion in GaAs, n-p junction formation 4=17441
 diffusion in GaSb 0=4359
 diffusion in Ge 2=12453
 diffusion of Hg and Se in solid and liq. 2=18610

Tellurium—contd

- diffusion and solubility in Ge 2=12460, 21063
 diffusion and solubility in Ge 3=2825
 dislocation effects in single crystals 1=3666
 dislocations, etching, suitable etchants 0=17928
 effective mass of hole carriers, from thermoelec.
 data 3=23028
 elastic consts. meas. 4=4489
 elastic consts., 100°-300°K, u. s. echo meas. 4=10402
 elec. cond., l.f. fluctuations, temp. depend. 0=15963
 electric conductivity, effect of vacuum
 annealing 2=2133
 electric props. of films, crystallization 2=8284, 14500
 electrical conductivity, anisotropy investig. 3=17820
 electrical and optical props., theory 0=6127
 electrical props. after purification 3=17898
 electron characteristic energy loss 1=14241
 electron energy loss spectra 2=3890
 electron lifetime and surface recombination velocity 3=877
 electronic band structure 1=17448
 electronic structure, composite valence and cond.
 bands 0=6126
 electronic structure and lattice mechanics 4=12680
 energy states allowing spin-orbit interact. 2=18711
 etch pits, enantiomorphous character 1=11534
 field electron emission, rel. to V-I characteristics 0=1145
 films, conductivity and Hall effect in modulating electric
 field 4=28575
 films, elec. cond., -100° to +200°K 2=2172
 films, electron and hole mobilities, effect of
 defects 2=2172
 films, light absorption, reflectivity, in vacuo, 2-13 eV 4=1754
 films, optical constants 0=4396
 films, optical constants in vacuum u.v. 1=19940
 films, optical transmission and electron
 absorption 0=21247
 films, strain coeff. 0=16198
 films, unexposed to air, optical props. 4=22897
 fluorescent yield of L-shell 4=3774
 force constants and vibrational spectrum determ. 4=1367
 galvanomagnetic coeffs. at 4.2°K 3=835
 galvanomagnetic effects in pure and p-type 1=20050
 growing monocrystals by Czochralski method 2=4393
 Hall coeff., sign inversions 4=12916
 Hall effect and resistivity 1=8958
 i.r. absorption, hole band structure 1=5048
 i.r. absorption, in mag. field 1=12495
 ionic radius, calculation 1=11562
 ionization potential-refractivity relation 0=2321
 ions, Te⁺, thermodyn. props. 2=7561
 ions, TeII spectrum, energy levels 4=25512
 ions, valency 4=29225
 lattice vibrations 1=4964
 lattice vibrations, group theory study 0=20737
 liquid, density, up to 750°K 3=9436
 liquid, elec. cond. and Hall effect, up to 850°K 3=9474
 liquid, optical props. and elec. cond. 3=14168
 liquid, semiconducting solns with Se 3=3813
 liquid structure, by X-ray scattering and atomic
 distribution 1=15840
 magnetic suscept. and hole effective masses, 300° to
 4.2°K 2=23631
 magnetic susceptibility in pure and p-type 1=20050
 magnetic susceptibility, temp. var. 3=18063
 magnetoelec. effects, influence of annealing 1=17623
 magnetoelectric coeff. and electron energy
 bands 1=14374
 magnetoelectric effect, influence of annealing 2=3990
 magnetoelectric properties, valence band,
 structure 3=22953
 melting curve up to 23 000 kg/cm² 3=19066
 in meteorites, abundance 1=15440
 molten, elec. props., meas. and theory 4=2707
 molten, elec. resist. and Hall effect 3=9475
 Mössbauer effect, Te¹²⁵ 4=1347
 optical absorption, intrinsic, for polarized
 light 2=18805
 optical activity of single crystals, rel. to
 enantiomorphous symmetry 1=5044
 optical properties and band structure 3=13151
 oscillator strengths by first excited level lifetime
 meas. 1=17272
 p-type, electron-irrad., 25 MeV effects at 80°K 2=23349

Tellurium—contd

- paramag. reson., 1.5-60°K 3=13308
 path length of slow secondary electrons 2=594, 3891
 phase transform. up to 50 kbar and 500°K 4=26568
 phase transformations, high press. 4=13503
 photoconductive cells, for i.r. 0=8840
 photoconductivity, in radiation detector 2=7460
 photoelectromagnetic effect meas. 4=28652
 photoconductivity 4=12994
 piezoelectric crystals, reflection light, harmonic prod.
 obs. 3=18956
 piezoresistive effect 2=4105, 8473
 positive ions, 5-25 keV, sputtering of Cu 1=8363
 production and analysis to high purity 3=18684
 purification by distillation 2=12931
 resistivity rel. to pressure up to 3×10^5 kgm cm⁻² 3=2902
 screw direction, det. by etching 1=20413
 secondary electron emission, primary energy
 depend. 0=10942
 semiconducting charge-carrier scatt., containing
 dislocations 4=17397
 semiconducting props., review 2=16732
 semiconducting props., scattering mechanism 1=1085
 spark spectra 4=17251
 specific heat at low temp. 3=8362
 spectrochemical analysis, impurity effects, arcs 3=25847
 spectrum, f-values 3=17534
 spin-lattice relaxation, rel. to electronic wave
 functions 2=6694
 spin-spin coupling with protons 3=719
 surface elec. cond. oxygen influence 2=10436
 surface tension, meas. 2=17427
 thermal conducting, 80-650°K 2=20951
 thermal conductivity 80-650°K 3=6483
 thermoelectric power, effect of phonon drag 0=6149
 thermoelectric properties, effective mass of hole
 carriers 3=23028
 thermoelectric props. 2=16765, 18760
 thin film, absorption and reflectivity, u.v. 3=2995
 thin films, variation of Hall effect mobility 1=19885
 tracer, electrolytic purification 0=5680
 u.v. absorption and reflectivity 0=8004
 u.v. emission spectrum, use for analysis 0=16397
 valence band structure, from magnetoelec. data 3=22953
 vapour press. meas. by elec. discharge method 1=2913
 whiskers, mechanical strength 1=20371
 X-ray continuous spectrum, Ohlin structure meas. 4=4242
 zone refining, elec. resistance purity test 0=13963
 Te^{127,129} isomer separation in different chemical
 media 4=30915

Tellurium compounds

- group IV-A tellurides, phase studies 2=17055
 halides, mol. structure 3=4759
 perovskite of type A₂BTeO₆, crystal lattice struct. 4=26665
 post-transition metal tellurides, solid solns. 2=23858
 TeBr, local electron centres, optical
 absorption 1=11229
 TeCd, reflection spectra, 20-400μ, 90°-300°K 1=14578
 TeCl, local electron centres, optical
 absorption 1=11229
 TeCl₄, crystal struct., atomic 4=23469
 TeCl₄, nuclear quadrupole resonance, Cl³⁵, liquid air
 temp. 4=1310
 Te-CrO₂, magnetic properties 4=13174
 TeF₆, Raman intensities for ν₁(a₁) modes 3=22559
 Te-Ga, metastable amorphous phases 3=20877
 Te(50-80%)-Ga, phase diagram 3=11277
 Te-Ge amorphous alloy, dendritic crystallization 3=1266
 Te-Ge, metastable amorphous phases 3=20877
 TeI, conductivities, elec. and thermal, thermoelectricity,
 microhardness 4=1624
 TeI, local electron centres, optical absorption 1=11229
 Te-In, metastable amorphous phases 3=20877
 TeO₂, use in dielec. mirror systems 2=1251
 TeO₂, high-temp. heat content 3=770
 TeO₂, Mössbauer effect, Te¹²⁵ 4=1347
 TeO₂, vib. spectra and struct. in cryst. and glassy
 states 2=16819
 TeS, u.v. absorption spectrum 1=3841
 Te-Se alloys, mag. suscept. and hole effective masses,
 300° to 4.2°K 2=23631
 Te-Tl, molten, surface tension and electrochem.
 props. 0=10355

Thermal expansion

alkali fluorides, high temp. X-ray data 4=3996
 alkali halides, calc. 3=17627
 alkali halides, at low temp. 2=18534
 alkali halides, at low temp., expt. 4=17369
 alkali halides, molten, and hard sphere dia. 4=18173
 alkali halides, 0-500°K 4=1401
 alkali halides, room temp. -700°C 0=17900
 alkali halides, by X-ray diffr., to melting pt. 1=14185
 alkali metal halides, and temp. derivatives 3=13389
 alkaline earth hexaborides 3=20113
 alloys, binary, substit. point defects theory 4=28374
 Alnico 5, and phase transform., α - γ 4=23251
 anharmonic crystals, Debye-Waller factor interpretation 4=17366
 anthracene, 95° and 290°K, lattice mechanics 4=23501
 antiferromagnets, uniaxial magnetoelastic props. 4=26348
 Armco iron, 0-1000°C 0=13498
 β -brass, rel. to specific heat, Pippard reln. 4=28947
 bi-metal thermostats, elastic analysis 2=15515
 Bravais crystal, phonon frequ. shifts 3=2717
 ceramics, insulators, electrical, fracture, shock resistance 3=17675
 combined dilatometry and thermal analysis apparatus 0=3675
 crystalline medium, strains, elastic coeffs. 2=10334
 crystals, coeff., derivation 2=6288
 crystals, effect of point defects 4=9939
 crystals, Grüneisen parameter rel. to vibr. instability 4=9865
 crystals, Grüneisen's law rel. to potential energy 2=6289
 crystals, insulators, electrical, fracture, shock resistance 3=17675
 crystals, ionic, lattice vibration theory, eqn. of state 0=4270
 crystals, lattice vibrations relationship 0=13462
 crystals, low-symmetry, expansion tensor axes, from X-ray data 0=13492
 crystals, negative coeffs. 2=16611
 crystals, Pippard's relns. deriv. 3=8357
 crystals, thermal dilation 1=17427
 crystals, from X-ray data, techniques compared 2=572
 cylinder, thermoelastic stresses 2=1095
 diamond, anomalous negative low-temp. values 3=10603
 diamond, 25°-750°K 0=15816
 diamond-type crystals, low temps., small, from lattice vibr. 4=12652
 dielectrics, rel. to theory for temp. behaviour of permittivity 2=6512
 dilatometer, automatic recording 3=9639
 dilatometer, low temperature obs. 4=20218
 dilatometer, for -190°-700°C meas. 2=19494
 dilatometer, quartz, for 20-1000°C range 3=4825
 dilatometer, silica, for wide range of temps 3=7163
 dilatometer, vacuum, 500°-1500°C region 2=19495
 dilatometers, Leitz, Bollenrath type, calibration 3=14398
 dilatometers, for viscous systems, recording and non-recording 0=207
 di-p-xylylene 0=8248
 EI-437A alloy, 20-500°C, solid soln. and precipit. phase 3=2735
 elastic moduli and thermal expansion 1=1717
 elastomers, linear coeff., 76-300°K 4=12653
 f.c.c. and two-dim. square lattices, theory 3=25204
 ferromagnetic dielectrics, low-temp., effect 4=22963
 ferromagnets, rel. to magnetocrystalline anisotropy 4=1818
 finite strain rel. to lattice theory approach 4=28375
 Fluoroplast IV, -190° to 325°C 0=6376
 fluorspar 0=20751
 fuel elements, externally clad cylindrical, thermal stresses 0=12989
 gases, adiabatic, temp. change meas. 2=11422
 gases, calc. from pVT data, experimental review 0=5210
 gases, isothermal, during radiation absorption 0=12433
 glass, quartz, 0°-1060°C meas. 4=3998
 glass, structure depend. 1=2543-4
 glasses, at low temp., expt. 4=17369
 glasses, soda silicate 3=22668
 graphite 1=10255
 graphite, accommodation 3=8371

 graphite, rel. to crystallite orientation, at high temps. 2=10327
 graphite, deformation by thermal cycling 3=23308
 graphite, diff. temp. ranges 4=1402
 graphite, irradi. 4=20760
 graphite, irradi. at high temp. 4=20323
 graphite, neutron-irrad. effects 4=30599
 graphite, -196°C to 2500°C X-ray diffract. apparatus 2=14972
 graphite, 1000° C to sublimation temp. 1=17416
 graphite, pyrolytic, in a and c directions 3=774
 graphite salts (nitrates, perchlorates and bisulphates) 4=22506
 graphite, rel. to temp. and neutron-irradiation 3=2737
 graphite, within the layer planes, X-ray diffraction study 4=28377
 graphite, X-ray study, expansion coeff. variation 0=8291
 Grüneisen relation rel. to thermoelastic eqns. 1=13009
 Grüneisen const., free volume theory 3=25203
 Grüneisen rel. theory, anharmonicity 4=15432
 halides, rel. to cohesive strength 2=8144
 ice 0=8206
 ice 1=17426
 ice, H₂O and D₂O, temp. depend. 0=9869
 ice and heavy ice, melting point to 18°K 2=3847
 inert gas solids, Grüneisen parameters, γ (n), calc. for f.c.c. lattice 4=17379
 inert gas solids, in the harmonic approximation 4=22502
 infrared optical materials, forty-eight 4=2811
 Invar, down to 4°K, mag. contribution to linear expansion 4=17371
 Invar-type alloys meas., dispersion-hardened 4=13419
 ionic crystals 1=918
 ionic crystals, theory 4=22448
 irreversible, size effects 2=20939
 linear, temp. coeff. by non-stationary conditions method 2=2914
 liquid metal, and surface energy, plasma model 4=18174
 liquids, cell model theory, rel. to intermol. energy 4=151
 liquids, dislocation model 1=6851
 low temperature obs., use of variable trans-former 4=22500
 magnetothermomechanics, theory 3=5012
 measurement, differential transformer arrangement for elastomers 4=12653
 measurement by Fabry-Perot dilatometer 4=16003
 meas., at high temp. prod. by solar furnaces 0=14896
 measurement indicator 4=22501
 measurement, industrial materials 4=17367
 meas., at low temp., capacitance technique 0=17901
 meas., optical method 3=11147
 measurement, using suspension tension transducer 1=20109
 measurement, above 2000° C, in vacuo 3=20693
 meas., up to 3650°C 0=12531
 metallic crystals, cubic symmetry 3=20112
 metals, effect of elastic deformation 1=14186
 metals, after effects 4=23086
 metals, calc. using Morse-type interatomic potential function 1=9981
 metals, changes on neutron and deuteron irradi. 4=30587
 metals, electron gas contrib. 0=17902
 metals, 15, meas. 1.5°-12°K 4=22503
 metals, Grüneisen's const., low temp. var. 3=15446
 metals, incorrect derivation 0=18899
 metals at low temperatures 1=3609
 metals, method for low temp. 2=7439
 metals, pressure-dependence, theory 1=8883
 metals, rel. to structure 2=19074
 naphthalene, solid and liquid, with soluble impurities, near m.p. 3=21324
 near melting point, anomalies in liquid and solid phase 3=21324
 nuclear reactor shell, due to neutron irradiation 0=7672
 1:3:5-trichlorobenzene, -183 to 20°C 0=8246
 optical lever apparatus, for single crystals 0=11587
 phase transformations, magnetometer 2=1554
 phosphors, eight 4=22501

Thermal expansion—contd

plastics 2=23023
 polycrystalline materials, anisotropy, microstructural strains 2=2088
 polyethylene, crystalline, effect of imperfections 2=14430
 polymers, rel. to glass temp. 2=21557
 polytetrafluoroethylene, -100° - 180°C 4=28975
 polytetrafluoroethylene, rolled in one direction 0=10324
 pyrrhotite, 0-350°C 0=13818
 quartz strands 4=13447
 radiation detector principle 0=2266

 rare earth hexaborides 3=20113
 rare earths, rel. to mag. ion ff interact. 2=15016
 real solid, as limiting case of eqn. of state 2=3851, 8178
 rocksalt 1=917
 rubber heated with dicumyl peroxide 1=20655
 Saran charcoal rods, rel. to water adsorption 4=30604
 semiconductors, effect of impurities 3=17664
 silica, at temps 2°-30°K 4=12656
 silica, vitreous, 4.2-140°K 0=12532
 solid model, one-dim., statist. mechanical theory 4=3995
 solids, anharmonicity, by many-particle perturbation theory 2=3844
 solids, anisotropic, cubical coeff. rel. to $(C_v - C_p)$ 2=6268
 solids, linear chain model, close-packed atoms 3=17665
 solids, at low temp., tables 1=13010
 solids, minute change measurement, volumometer 1=10465
 solids, nonlinearity with temp. 2=20940
 solids, pressure effect calc. 0=13495
 solids, relationship with elastic constants 3=11130
 solids, relationship with mech. and other thermal props. 0=9854
 solids, survey 2=14346
 solids, textured polycrystalline 3=2736
 solids, theory, using Mie-Grüneisen eqn. of state 4=1401
 solids, two-atom model 2=8176
 steam, eqns. of state 2=13366
 stearic acid, B- and C- forms, X-ray study 0=18368
 steel, Cr-Ni, effect of cold working, ageing 4=1951
 steel, plastically deformed, 22-50°C 0=19501
 stress analysis 0=8574
 study using Debye-Scherrer 19cm X-ray camera 4=27345
 theory, crystals, low temp. 4=17368
 thermoelasticity, plane dynamic problem 2=13287
 thermoelasticity, 3-dimens. steady state soln. 2=7154
 thiourea 2=12566
 III-V cpds. 3=2914
 III-V compound semiconductors, coeffs. 1=4970
 transition elements, at low temp., expt. 4=17369
 triglycine sulphate 0=7856
 triglycine sulphate, anomaly at Curie pt. 2=10335
 triglycine sulphate, rel. to temp., effect of X-rays 3=6481
 two-dimensional lattices 0=4271
 α -uranium, -196° to +100°C 1=19726
 uranium monocarbide 1=5953
 volumometer, for solids, by oil-filled bellows 1=10466
 X-ray diffractometer, d values 2=6796
 xenon, solid (20°-120°K) 1=9982
 A, solid, at low temp. 0=8844
 Ag, after cold working and annealing 2=20938
 Ag, Grüneisen γ , temp. depend. calc. 3=10607
 Ag, Grüneisen ratio rel. to volume, calc. 3=4828
 Ag halides up to melting points 4=3999
 Ag, lattice const. changes, from Bradburn-Fürth eqn. of state 4=20219
 Ag, lattice expansions and Debye temps. 0=1909
 Ag, lattice vacancy equil. conc. 0=13548
 Ag, liq. and solid, in terms of defect formation 0=9893
 Ag, at low temp., expt. 4=17369
 Ag, surface free energy, anisotropy, effect of impurities and temp. 4=17373
 Ag, 20°-1200°K 3=17663
 Ag-Cd α -phase alloys up to 500°C 2=12389
 AgCl, up to 878°C, X-ray meas. 4=20223
 AgCl, rel. to Frenkel defects 3=10604
 AgI, 4. 2°-300°K, rel. to structure and bonding 4=6751
 AgI, negative expansion and cation mobility 1=12357
 Ag₂O 1=12347
 Ag-Pb, surface free energy, anisotropy, effect of impurities and temp. 4=17373

Thermal expansion—contd

Al, after cold working and annealing 2=20938
 Al, detection of vacancy concentration 0=27092
 Al, (f. c. c.), at low temp., expt. 4=17369
 Al, Grüneisen γ , temp. depend. calc. 3=10607
 Al, lattice const. changes, from Bradburn-Fürth eqn. of state 4=20219
 Al, liq. and solid, in terms of defect formation 0=9893
 Al, at low temp. 0=8844
 Al, at low temps. rel. to lattice vibrations 1=4971
 Al, near 10°K 1=17428
 Al, pressure depend. 0=13495
 Al, room-temp., X-ray diffractometer determ. 4=3997
 Al, small crystals, ~ 0.025 μ diameter 4=9861
 Al, rel. to temp. 4=20220
 Al, rel. to thermal defects 1=14289
 Al, 20-30°K, departure from Grüneisen's theory explained 0=17902
 Al, 229-656°C, and lattice parameter temp. depend. 0=4294
 Al wires, by lattice const. meas. 1=20520
 Al-Ag alloys, rel. to equil. vacancy conc. 4=15469
 Al and Al-Cu, 30-500°C, nonlinearity with temp. 2=20940
 AlAs, 291-577°K 0=1563
 Al-Cr alloys, rel. to temp. 4=20220
 Al-Mn alloys, rel. to temp. 4=20220
 Al-Pu alloy, 5-phase stabilized, at < 300°K 1=17412
 AlSb, 20° to 340°K 4=1404
 Ar, solid 3=11147
 Ar, solid, linear chain model 3=17665
 Au, annealed, struct. expansion and thermal defect existence 4=30554
 Au, 15-1057°C, vacancy conc. 2=3903
 Au, to 878°C, X-ray meas. 3=10605
 Au, Grüneisen γ , temp. depend. calc. 3=10607
 Au, lattice const. changes, from Bradburn-Fürth eqn. of state 4=20219
 Au, liq. and solid, in terms of defect formation 0=9893
 Au, rel. to thermal defects 1=14289
 Au, 30-500°C, nonlinearity with temp. 2=20940
 Au, 20°-1200°K 3=17663
 Au-Ag, surface free energy, anisotropy, effect of impurities and temp. 4=17373
 BaTe 4=28372
 BaTiO₃, anisotropy 3=12929
 Be, anisotropic, below 0°C 2=2056
 Be, near 10°K 1=17428
 Be, temp. depend. 3=3297
 BeO, dense, up to 2000°C 2=3845
 Bi 4=12882
 Bi, 4°K to room temp. 4=15434
 Bi, linear coeff., 80-540°K 0=13493
 Bi₂Te₃, a and c directions 2=3846
 C and graphite, -196° to 2000°C 4=22505
 CaF₂, (cubic), at low temp., expt. 4=17369
 CaF₂, lattice dynamics 2=3820
 CaO 4=28372
 CaS 4=28372
 Cd, 1.5° to 12°K 4=9864
 Cd, from 1.5-12°K, electronic and lattice contribs., and Grüneisen parameters 4=17370
 Cd, (h. c. p.), at low temp., expt. 4=17369
 Cd, 10-300°K, negative below 20°K 4=12655
 Cd-Bi alloys, thermally cycled, dimens. growth coefficient 4=28376
 Cd-Pb alloy, irreversible thermally-induced shape changes 1=1440
 CdSb, anisotropy of linear expansion 3=25649
 CdTe 1=4969
 CdTe, anomalous negative low-temp. values 3=10603
 CdTe, linear coeff., temp. depend. 1=916
 Cd-Zn alloy, irreversible thermally-induced shape changes 1=1440
 Ce, giant coeffs., 1.5°-14°K 3=15442
 Ce, low temp. anomalies, and f electron states 4=15433
 CeO₂, X-ray diffr. meas. 3=8370
 CeS 4=6952
 CeS, X-ray determ. 4=30523
 CeS, Ce₂S₃, 20-1020°C, Debye temps 4=22508
 Ce₂S₃ 4=6952
 Ce₂S₄ 4=6952

Thermal expansion—contd

CoF₂, from crystal structure, atomic, temp. var. 4=9863
 CdHg(SeCN)₁ 3=16083
 CoSi, coeff. det. using X-rays 2=20942
 Cr, anomaly at Néel temp. 3=8753
 Cr, anomaly at 38°C 1=19725
 Cr ferrite, alloyed with various metals, temp. depend. 3=20900
 Cr ferrite, Grüneisen's const., X-ray meas. 4=1407
 Cr, near 10°K 1=17428
 Cr, no anomaly at 200°C phase transform., X-ray obs. 4=20700
 Cr, temp. depend. of coeff. 3=5100
 CrO₂, negative, c-axis, rel. to Jahn-Teller effect 2=23079
 CsBr, calc., Grüneisen approx., by sums in wave-vector space 3=20115
 CsBr, by X-ray diffr., to melting pt. 1=14185
 CsCl, polycryst. rods, up to 600°C 4=12654
 CsCl structure, Grüneisen parameters rel. to temp. 3=4826
 CsI, meas. by X-ray diffraction 0=6026
 CsI, quantum-mech. box model 3=4796
 Cu, Grüneisen constant 4=4000
 Cu, Grüneisen γ , temp. depend. calc. 3=10607
 Cu, Grüneisen parameter, temp. depend. calc. 4=12657
 Cu, high temps., Grüneisen relation form, from X-ray diffr. 4=10529
 Cu, lattice const. changes, from Bradburn-Fürth eqn. of state 4=20219
 Cu, liq. and solid, in terms of defect formation 0=9893
 Cu, liquid 2=19544
 Cu, low temp. electronic contribution 0=17901
 Cu, at low temp., expt. 4=17369
 Cu, at low temps., meas. using elec. capacitance technique 4=25862
 Cu, near 10°K 1=17428
 Cu, 100°-800°K meas. 2=12390
 Cu, -190°-700°C meas. 2=19494
 Cu, pressure depend. 0=13495
 Cu, surface free energy, anisotropy, effect of impurities and temp. 4=17373
 Cu, thermal expansion, low temp. meas. 4=20218
 Cu, 20°-1200°K 3=17663
 Cu-Ag, surface free energy, anisotropy, effect of impurities and temp. 4=17373
 Cu and Cu-Al, 30-500°C, nonlinearity with temp. 2=20940
 Cu-Mn alloys, at low temp., expt. 4=17369
 Cu-Mn dilute alloys, at low temps 2=14388
 Cu₂O 1=12347
 D₂O¹⁸, liquid, up to ~80°C 3=14144
 Dy, contraction and magnetostriction, large 3=20551
 Dy, lattice parameters rel. to mag. ordering 3=15444
 Dy, -64 $\times 10^{-6}$ (°C)⁻¹ change in linear expansion coeff. at 1 atm Néel point 4=30607
 F₂, liq., coeff. calc. using significant structure theory 4=8166
 Fe, low temp. electronic contribution 0=17901
 Fe, and mechanical prop. improvement by adding dispersing particles 4=17733
 Fe, near 10°K 1=17428
 Fe, pressure depend. 0=13495
 Fe-Cr alloys, rel. to magnetic props. 0=4480
 α Fe-Cu, surface free energy, anisotropy, effect of impurities and temp. 4=17373
 Fe-Ni, f.c.c., two structures, "Invar" effect 3=20114
 Fe-Ni-Mo alloys, coeff. re. to Mo content 4=17737
 Fe₂O₃, α -phase, rel. to mag. transitions 3=5029
 Fe-Pd alloys, γ -phase, Invar behaviour at 30 at.% 3=998
 Fe-Pd alloys with low exp. coeffs. 3=2734
 FeS, rel. to electrical conduction 1=12424
 Fe-Si alloys, up to 1200°C, rel. to Si content 3=10602
 GaAs, anomalous negative low-temp. values 3=10603
 GaAs, 78-680°K 0=1563
 GaAs, 20-360°K 1=8885
 GaP, rel. to anharmonic forces 0=10043
 GaSb, 20°-340°K 4=1404
 Ga₂Te₃ 1=17744
 Gd, anomalous expansion of single crystals 3=15851
 Gd, 80-750°K, anomaly at Curie pt. 0=7855
 Gd, giant coeffs., 1.5°-14°K 3=15442

Thermal expansion—contd

Gd, lattice parameters rel. to mag. ordering 3=15444
 Gd single crystals, anomalous 3=11092
 Gd single crystals, anomalous expn. 3=6715
 Gd single crystals, anomalous, theory 4=28409
 GdH₃, energy 4=13486
 Ge, anomalous negative low-temp. values 3=10603
 Ge, Grüneisen γ , temp. depend. calc. 3=10607
 Ge, Grüneisen parameter, temp. depend. calc. 4=12657
 Ge, Grüneisen parameters, lattice vibrations 4=22507
 Ge, Grüneisen's gamma, low temp. limit 2=8177
 Ge, at low temps. 0=7854
 Ge, p-type, rel. to impurities, 77° to 340°K 4=9862
 Ge, 30-500°C, nonlinearity with temp. 2=20940
 Ge, 2 - > 42°K 3=15443
 H₂ solid 4=22491
 H₂O, coeff., rel. to sound absorpt. 4=14159
 H₂O, temp. var. discontinuities, as for viscous flow 4=21124
 H₂O¹⁸, liquid, up to 80°C 3=14144
 He, liquid, phonon contribution 0=2281
 He³, liq., coeff. from 0.55 to 1°K 0=8881
 He³, liq., 0.015°-0.3°K meas. 3=12016
 He³, liquid 0=3701

 laser induced, from conductors, semiconds., insulators 3=14626
 meas., in discharge tubes 0=5334
 metal films, connection between Richardson's consts. 4=24729
 metals, laser induced 3=24333
 from oxide cathode, rel. to strong electric field 1=13100
 Philips impregnated cathode emission charact. 2=11691
 planar diode flow, Langmuir limit 0=269
 in plasma, Ar 4=18665
 plasma surround effects 4=5697
 point tungsten cathodes, high brilliance 2=3067
 porous emitters, Richardson plots 4=5693
 Richardson eqn., and Richardson photoemission eqn. 1=18918
 rough emitters, anomalous radial velocity spectra 2=1480
 Schottky effect, periodic deviations, numerical analysis 3=424
 semiconducting cathode, non-stationary emission 0=17024-5
 semiconducting cathodes, time dependence 1=16370
 semiconductor, narrow energy band, beam characteristics 4=27563
 semiconductors, effect of electric field 1=14419-21
 semiconductors, ionic, in strong fields 2=21203
 semiconductors, ionic, in strong fields 3=2982
 semiconductors, laser induced 3=24333
 shallow-donor emitters 3=422
 spherical metallic particles, source 2=3066
 temperature of filament, general calc. 3=14629
 in thermal-electrical energy conversion 0=14935, 15051
 thermal electrification effects 4=19082
 thermionic converters, low-press., space-charge neutralization 4=5694
 thermostimulated emission, rel. to electron trap analysis 2=3892
 transition elements and cpds. 1=13103
 valves, millisecond current decay (grid-film effect) 2=3079
 velocity distrib. 4=11693
 Ba layers on W 1=16361
 BaO, doped with rare earths 3=422
 C, induced by laser beam 3=19304
 Cs-filled thermionic converter, low-freq. oscillations, expt. 4=11504
 Cs thermionic converter, effect of Hg and Xe 4=21450
 Cs vapour diode 3=14628
 Cs vapour valve, power variations 2=7553
 Cu-Cu₂O, low temp. into vacuum 1=4633
 Ge 0=17030
 Ge, Cs-vapour treated 0=7139
 HfC 4=3027
 HfC, work function meas. 2=3070
 KCl, In, Ga or Tl doped 4=13081
 LiF: Co, X-irrad. and non-irrad. 3=8598
 MgO, temp. depend. 1=2988
 Mo cathodes, vapour deposited 4=16520
 Mo, suppression of emission by carburization 2=15943
 NaCl, coloured 0=18072
 NaCl:Ca 4=12961
 NaCl:Ca, effect of Cu, Ag 2=8563
 NbC 4=3027
 NbC-UC, temp. depend. 2=22249
 NbN 4=3027
 NdS, 800°-1500° C meas. 4=14744
 Ni, Ba-coated, reversal phenomenon 3=21860
 Ni, Ba-coated, theory and expt. 3=21859
 PrS, 800°-1500° C meas. 4=14744
 Pr₂S₃, 800°-1500° C meas. 4=14744
 Re, and vacuum technique 4=18297
 Re-W, Re-Mo, and vacuum technique 4=18297
 Rh in Cs vapour, low coverage, discontinuity 3=14624-5
 ScB₂ 4=3027
 SrO, doped with rare earths 3=422
 Ta, in Cs and Rb vapour 2=207
 Ta, in Cs vapour, low coverage, discontinuity 3=14624-5
 TaB₂ 3=7631

Thermionic emission—contd
electrons—contd

- TaC—UC, temp. depend. 2=22249
 Th, filament temp. calc. 3=14629
 Th layers on W 1=16361
 Th monolayer on W, desorption effect 2=8896
 Th oxide films, with adsorbed Ba 2=9618
 Th—W, maser, optical, induced 3=19305
 Th—W, saturated emission at high currents, meas. 3=19307
 TiN 4=3027
 TmB₆ (+ TmB₈) 4=3027
 U, films and cpds., 1200-2400°K, U-activation 4=5695
 UC 4=13611
 UC cathode, collector electrode contamination 3=4179
 UC, on W, 1200-2100°K 0=12626
 W, Ba-activated, suppression of emission by carburization 2=15943
 W, Ba-coated, in O₂ atmos. 2=9617
 W cathode, laser-heated 4=18521
 W, cathode, laser induced 3=21857
 W cathode, use in microtron 4=8801
 W crystals, periodic Schottky deviations 3=21863
 W, in Cs vapour, low coverage, discontinuity 3=14624-5
 W, effect of adsorbed Ca 2=1477
 W, effect of adsorbed Sr 2=1478
 W, impurity effect 4=21555
 W, incandescent, H⁺ formation 0=8985
 W, induced by laser beam 3=19304
 W, points, laser induced 4=8811
 W, uniaxially oriented, emission uniformity 4=3026
 W wires, variation rel. to time of heating by d.c. and a.c. current 4=8804
 ZnS, effect of Cu and Pb activation 4=570
 ZnS, sorption layer origin 1=18917
 Zr, filament temp. calc. 3=14629
 ZrN, 4=3027

ions

Thermocouples

- bonding into samples, use of hard Ga alloys 0=14360
 butt welding, 0.001-0.01 in. dia. 0=12576
 calibration to 2200°K, Ti-tube furnace 3=283
 cascade generators, optimal operation mode, efficiency 3=2985
 cascaded, calc. of overall efficiency 1=268

Thermocouples—contd

- chromel—alumel, for heat pipe temp. profiles meas. 4=27349
 cooling, rapid, thermo-couple solders on quenching in water 3=7371
 in cooling systems, regenerative 0=19602
 crystal-growth temp. meas. 2=21472
 deformed—undeformed metal, e.m.f. origin in lattice defects 1=14525
 differential sensing controlled 3=21600
 e.m.f., effect of pressure, for various metals and alloys 1=5035
 eutectic Sn—(alloy Sn—Bi), molten, thermo-e. m. f., 400°-800°C 4=8219
 fine wire probes of great strength, rapid response, and high spatial resolution 4=8486
 generator (150 couples) for teaching purposes 1=7021
 graphite, pyrolytic, output and sensitivity 4=21343
 graphite—Re, graphite—Ir, for use in C atmospheres at 2000°C 1=4502
 heat leaks, compensation through a multilayer stack 4=27468
 in HERO reactor, calibration by gas thermometer 3=284
 high-temp., stability in vacuum 0=19516
 ice-point junction for continuous use over long periods 1=8258
 immersed thermocouple, error analysis 1=8259
 junctions at 0°C with zero-thermostat 2=19757
 large couple for temp. disturbance location 2=9524
 in manometers, low-pressure measurement 1=5248
 materials for temp. meas., review 2=11611
 measurement errors, due to heat flow from thermal regions 0=5218
 microcalorimeter, calibration using Peltier effect 4=27367
 Moll thermopiles for high-intensity thermal radn. meas. 2=11535
 noble metal, for calorimetry 0=16925
 for nuclear reactor fuel cells, weakened 4=28095
 operation of general thermocouple 0=12575
 operation, under irradiation 4=29796
 Peltier cooler, heat transfer, under steady currents 1=2902
 Peltier juncns. fast transient behaviour 2=16762
 as piston, in automatic m.p. recorder 1=1846
 plasma, efficiency 0=9040
 plasma probes, for blob energy meas. 4=24669
 plasma thermocouple, dynamic behaviour 2=7658
 probe for sound intensity meas. in water 4=2796-7
 probes, pointed, design 1=13016
 probes, very fine, for temp. meas. in water flow 4=18465
 radiation thermocouple, response characteristics 1=11853
 radiation thermoelement, direct visual adjustment 0=6990
 for radio-frequency heating control 4=21344
 reference junction, multipoint, in temp. meas. 3=7375
 response of circuit to nonsteady current 1=8301
 review, theory, applications 1=4501
 standard ice point, thermoelectrically maintained 3=19050
 surface type, response rel. to size and junction 4=14567
 switch, Hg, for establishing true electrical zero 1=5366
 temperature changes, rapid meas., circuit 2=1300
 for temperature—time recording, automatic 4=5430
 theory; zero-, first-, and second-order 1=11902
 thermal conductivity gauge 1=16132
 thermal inertia, equations 3=11985
 thermodynamic props. 0=3693
 thermopile, B-coated, neutron sensitive 2=3362
 thermopile, i.r., solid backed, evaporated 4=18484
 thermopile + motor, thermal energy converted to motion 3=9717
 thermopiles, radiation, for precise photometric meas. 3=3862
 thermopile, ribbon, miniaturized version 3=290
 thermopile, ribbon type 2=2928
 thermopiles with ≥80 junctions, method of construction 1=7680
 time constant detm. method 4=350
 transient temp. meas. in solid body 0=7068
 vacuum-deposited thin-film type for meas. of substrate surface temp. 4=2874
 vacuum gauge, circuit diagram 3=5473

Thermocouples—contd

- vacuum gauge, const. temp., high-sensitivity probe 4=18287
 in vacuum system, Mo and Kovar fused to glass 3=24092
 Ag, bulk-film, thermoelec. power 2=14495
 Ag thread—Co film, power, rel. to temperature 3=15539
 Au, thermopower variation due to vacancies 4=10142
 Au—Co, low-temp behaviour 1=8889
 Au—Co, thermal cond., elec. res., Lorenz number, 4-100°K 0=7858
 Au—Fe alloy, for low temp. heat cond. meas. 4=8537
 Bi—Ag, free, preparation by vacuum evap. 4=2989
 Bi—Cu, mag. field effect 2=14504
 Bi—Sb junctions prod. and props. 3=15640
 Bi—Sb—Te alloys, as refrigerating elements 0=2915
 Bi₂Te₃, efficiency in cascade elements 3=2985
 Bi₂Te₃—Sb₂Te₃, thermoelec. power, elec. cond. depend. 0=2917
 for use in C atmospheres at > 2000°C 1=4502
 Cr—copel, for meas. of large neutron fluxes 2=3364
 Cs plasma, for 1600°–2600°K hot-junction 0=1139
 Cu—constantan, in low temp. thermostat, 4.2°–77°K 0=19522
 Cu—Pb, 77.4°–298°K 3=20425
 Ir—Rg alloys versus Ir, reference tables 4=16278
 Ir—Rh, use as micro furnace 4=18471
 NbC—graphite and NbC—ZrC, construction and calibration 4=18466
 Pb—Bi, molten, thermo-e. m. f., 400°–800°C 4=8219
 PbSe, efficiency in cascade elements 3=2985
 Pb—Sn, molten, thermo-e. m. f., 400°–800°C 4=8219
 Pt, in contact with Nb, diffusion 2=3954
 Pt, miniature, thermal and hydrostatic behaviour 4=8484
 Pt—Bi, e. m. f., pressure effect 1=18753
 Pt—PtRh, calibration over wide temp. range, reproducibility 4=18467
 Pt—Pt/Rh, effect of thermal neutron irradiat. 3=3915
 Pt and Rh mixtures, reference tables, 0°–1800°C 4=27363
 Re—W, in H₂ atmospheres, stability, thermal cycling 0=14955
 Sb—Bi, molten, thermo-e. m. f., 400°–800°C 4=8219
 Sn—Cd, molten, thermo-e. m. f., 400°–800°C 4=8219
 Ta/Rh—W, up to 2800°C 0=7006
 W—Re, for use in C atmospheres at > 2000°C 1=4502
 W—Re, thermoelectric stability at high temp. 4=24417
 W—Re, up to 2000°C, study 4=8485
 W/Rh—W, up to 2800°C 0=7006

 Bi₂Te₃, 4.2-300°K 2=657
 Bi₂Te₃, n-type, thermal diffusivity meas. 2=4080
 Bi₂Te₃, Peltier effect, use in crystal growth 1=20438
 Bi₂Te₃, power and efficiency 2=4079, 8449
 Bi₂Te₃, power, rel. to semicond. props. 0=6089
 Bi₂Te₃, thermoelec. power 1=1115
 Bi₂Te₃, var. with Ge, Pb doping, 100-400°K 4=15535
 Bi₂Te₃, variation of thermoelec. power with sintering temp. 0=7972
 Bi₂Te₃-Bi₂Se₃ system 2=16763, 18756
 Bi₂Te₃-Bi₂S₃, thermoelec. power 0=6387
 Bi₂Te₃-Bi₂Se₃, e.m.f., ageing effects 0=2889
 Bi₂Te₃S₅, Seebeck coeff, anisotropy 2=16717
 Bi₂Te₃-Sb₂Te₃ 0=16002
 Bi₂Te₃-Sb₂Te₃ with added Te and Se 3=913
 Bi₂Te₃-Sb₂Te₃, elec. cond. depend. 0=2917
 Bi₂Te₃-Sb₂Te₃, p-type, Seebeck coeffs. 2=23372
 Bi₂Te₃-Sb₂Te₃, solid sol. rel. to electron mobility 2=23161
 Bi₂Te₃-Se_{0.3}, doped with Cu and Bi cpds. 3=10895
 Bi₂Te₃Se_{0.9}, doping effects of Pb, I, and Ag 1=8968
 Bi₂Te₃-Se_x, effect of oxygen content 1=17603
 Bi₂Te₃-Se_x, rel. to halogen doping 2=12550
 Bi₂Te₃-Se_x, power, rel. to O content 3=860
 Bi₂Te₃-Se_x, temp var. and conductivity 4=1697

Thermoelectricity—contd

- CaO films, power, rel. to temp. 3=20471
 CaO, power and n-type elec. cond. 4=22705
 CaO, thermoelec. power 1=17725
 Cd oxide pressed powders, with excess Cd or O, 77-400°K 3=22940
 Cd, thermoelec. power 4=6793
 Cd₃As₂ 1=17811
 Cd₃As₂ 2=6266
 Cd₃As₂, n-type, power 95° to 700°K 2=23374
 CdGeAs₂ 3=8518
 CdGeAs₂, power 4=1593
 CdIn₂Te₄, n-type, temp. depend. 4=6949
 CdO 0=11752
 CdO 2=21150
 CdO, compressed powder, 80°-400°K 2=18698
 CdS, evap. films, effect of defect annealing 2=2160
 CdS after ionic bombardment, thermally stimulated current 1=17721
 CdS, thermocond., rel. to defect state meas. 2=8207
 CdSb, Ag-doped, meas. 4=20356
 CdSb, e.m.f., temp. depend. 0=1660
 CdSb, impurity effects 3=20325
 CdSb, monocrystals, thermoelectric power 0=15946
 CdSb, power, meas. 2=23415
 CdSb, power, variation with temp. 2=20949
 CdSb, pure and doped 3=17971
 CdSb, temp. depend. and anisotropy meas. 4=6948
 CdSb, thermoelec. power, variation with temp. 3=2740
 CdSb: In, e.m.f., temp. depend. 0=1660
 CdSb-ZnSb 0=18401
 CdSb-ZnSb, 90-400°K 4=1592
 Cd₄Sb₃ 2=16719, 18699
 CdSnAs₂ 1=8952
 CdSnAs₂ 3=8518
 CdSnAs₂, 100-600°K, and effective electron mass 3=17970
 CdSnAs₂-InAs solid solutions, 100-600°K, and effective electron mass 3=17970
 CdTe, figures of merit 2=23084
 CdTe-CdSe alloys, rel. to composition 4=22706
 Ce hydride, Seebeck coeff. 4=20328
 Ce sulphides, 4-1300°K 2=8451
 CeO₂, heat treated, thermoelec. power 0=606
 Ce₂S₃, 20-1000°C 4=4161
 Ce_{3-x}S₄, x > 0.3, analysis rel. to temp. 4=10048
 Ce_{3-x}S₄, x = 0-0.3, semimetallic, meas. rel. to theory 4=10047
 Co films, rel. to crystallinity 1=14366
 Co, thermoelectricity below 1°K 0=18076
 Co-Fe alloy, e.m.f. rel. to zone structure 1=19914
 Co-Fe alloy, e.m.f. rel. to zone structure 2=6506
 Co_{1-x}Fe_xSi, semimetal props. meas. 4=17486
 Co-Ni alloy, e.m.f. rel. to zone structure 1=19914
 Co-Ni alloy, e.m.f. rel. to zone structure 2=6506
 CoSb₃, with Sn, Te and Ni impurities 0=10006
 Co-Se and Co-Te systems 4=7480
 CoSe₂ 1=3769
 CoSi, -200°-+1200°C meas. 3=25427
 CoSn₂, thermoelec. power 0=13577
 Cr, anomaly at 35°C 3=10897
 Cr borides, carbides and nitrides 1=3707
 Cr, rel. to Cr carbides 2=23378
 Cr, 4.2°-340°K, rel. to antiferromag. 3=13140
 CrB 3=1124
 CrN, Seebeck coeff. 3=865
 CrO₂, near Curie temp. 1=14395
 Cr₂O₃, kinetics of Nb₂O₅, V₂O₅ donor addition 4=30535
 Cr₂O₃, thermal e.m.f., effect of impurities of equal or lower valency 4=28612
 CrS_(1.15-1.20), negative thermoelectric power 1=11250
 CrS_x (x = 0.95-1.20), power 1=14465
 CrSi₂, rel. to semicond. props. 4=20357
 CrSi₂, -200°-+1200°C meas. 3=25427
 CrSi₂-MnSi₂ 1=3797
 Cs, and alloys, low temps. mechanism 3=23027
 Cs, thermoelectricity below 1°K 0=18076
 Cs-Sb layers, var. with Cs content 3=8574
 Cu alloys, with Cr, Mn, Fe Co 2=4081
 Cu alloys, dilute, thermoelectric power at 8-350°K 1=1116

Thermoelectricity—contd

- Cu alloys, thermoelec. power, effect of transition metals 3=13139
 Cu, cold-rolled, thermoelec. power, 8-320°K, rel. to annealed Cu 0=1691
 Cu, cold-worked, relative effects at low temp., theory 0=13640
 Cu, defects distrib. study 1=14247-8
 Cu, dilute alloys, 4-120°K 0=9863
 Cu, dilute binary alloys, thermoelec. power, 8-320°K 0=13640
 Cu, effect of O₂ chemisorption 2=14591
 Cu, e.m.f. prod. by plastic deformation 0=15998-9
 Cu, Peltier coeff. meas., phonon drag 3=20425
 Cu, positive sign of power, explanation 2=656
 Cu, thermoelec. power, highly pure specimens, 0.1-350°K 0=20945
 Cu, rel. to vacancies and dislocations, activation energy study 1=14254
 Cu—Au alloys, with Co, Fe, Mn impurities, thermoelec. power 1=11254
 Cu₂Au, ordering meas. from thermoelec. data 3=25753
 Cu₂Au, thermo-e.m.f. calc. 3=4957
 CuCl containing CdCl₂ 4=7085
 CuFeS₂, power 3=1027
 Cu—Ge solid solns., supersaturated, decomposition 1=15159
 CuInTe₂, off. stoichiometric, peaks 4=26160
 Cu—Ni, thermoelec. power 0=4373-4
 Cu—Ni thermopile, and relax. time det. 2=10548
 CuO, effect of sintering 2=6465
 Cu₂O, 500-1130°C 3=25428
 CuO—CoO system 4=12890
 Cu₂O, 1000-1250°C 0=6147
 CuPt, thermo-e.m.f. calc. 3=4957
 CuSb₂, power 2.5°-300°K meas. 4=15520
 Cu—Zn, α -phase, 4.2°-300°K 3=20267
 Cu—Zn—Sb alloys 3=23466
 D, constricted elec. discharge, infl. of thermoelec. effects on max. temp. 1=18781
 Fe, cold-deformed, recovery kinetics 2=23485
 Fe oxides, rel. to FeO ratio, electron transfer model 2=10490
 Fe, thermoelectricity below 1°K 0=18076
 Fe—Al alloys, long-range order 1=20592
 FeB 3=1124
 Fe—Cr, during $\alpha \rightleftharpoons \gamma$ transformation 2=23234
 Fe and Fe alloys, lattice binding forces invest. 3=2984
 Fe—Ge alloys, β -phase 4=29118
 Fe—Ge alloys, heat treatment and temp. depend. 4=26010
 Fe_{1-x}Mn_xO₃, Seebeck coeff. rel. to temp., anomaly at Curie pt. 4=17491
 Fe—Ni alloy, e.m.f. rel. to zone structure 1=19914
 Fe—Ni, Ni conc. depend. 4=13184
 FeNi₃, change due to mag., and magnetostriction 3=13262
 Fe₂O₃, α -phase, Seebeck effect, impurity effects 4=1599
 Fe₂O₃, α -phase, Seebeck effect, charge carriers 4=1600
 FeSb₂ 1=3769
 FeSe₂ 1=3769
 Fe—Si, Si conc. depend. 4=13184
 Fe—Si, transverse thermo e.m.f. 0=11666
 FeSi₂, n and p-type meas. 4=12998
 FeSb₂, thermoelec. power 0=13577
 FeTe₂ 1=3769
 Ga arsenoselenides, 500-1000°K 1=3766
 Ga, arsenoselenides, thermoelec. power 0=15955
 Ga, liq., abs. power, meas. 3=1710
 Ga, liq., up to 160°C at const. volume 3=23902
 Ga, liquid, power 2=5027
 Ga, liquid, Seebeck coeff. 0=12419
 Ga single crystals, temp. depend. and anisotropy 1=14529
 GaAs diodes, recombination radiation 2=23393
 GaAs, n-type 4=1601
 GaAs, thermoelec. power and Nernst—Ettingshausen effect 3=10817
 GaAs, work function 2=11696, 13587
 GaAs—Ga₂Se₃ solid solutions 1=19877
 GaAs—Ga₂Se₃ system 0=11712
 GaSb, e.m.f., 200-400°K 0=6119
 GaSb, at m.p., and liquid state 0=624
 GaSb, n-type, Seebeck effect 3=10819
 GaSb, -190° to +600°K 0=623
 GaSb, p-type 2=18703
 GaSb, p-type, e.m.f., 150-950°K 0=15954

Thermoelectricity—contd

- (90%)Ga₂Se₃—(10%)GaSe, anomalies 1=10072
 Ga₂Te₃ (59.5-60.0 at.%) Te, power meas. 3=10815
 Gd hydride, Seebeck coeff. 4=20328
 Ge, bombarded by fast neutrons, meas. 3=10898
 Ge, bulk Peltier voltage, resistivity depend. 0=11733
 Ge, effects of strain 0=1643
 Ge, rel. to hot current carriers 3=10791
 Ge, magneto-Seebeck study in n-type, quantum transport 3=4914
 Ge, n- and p-type, carrier density depend. 2=2197
 Ge, n-type, effect of edge dislocations, calc. 1=10070
 Ge, n-type, heavily alloyed, e.m.f. 3=15631
 Ge, n-type, highly doped, thermal e. m. f., 100°-330°K 4=30669
 Ge, n-type, Seebeck effect, strain depend. 0=11735
 Ge, neutron irradi., thermoelectric power rel. to carrier conc. 4=12898
 Ge, phonon contrib. to thermoelec. power 0=2873
 Ge, properties in magnetic field 1=8932
 Ge, Seebeck coeff. on fast neutron bombard. 4=10012
 Ge, Seebeck effect meas. rel. to plastic bending 1=17692
 Ge selenides, thermoelec. power, temp. depend. 1=1043
 Ge tellurides, thermoelec. power, temp. depend. 1=1043
 Ge, temp. and carrier density var. 3=20426
 Ge, thermoelectric power of hot carriers in n- and p-type 4=12999
 Ge, thermoelectric power measurements 1=5753
 Ge, volume-gradient effects, impurity region 1=17812
 Ge, volume gradient phenomena 1=17644
 Ge, volume gradient thomson effect 0=11732
 Ge—Si alloys, for power generation 2=3855
 Ge—Si, in power generator 4=8607
 GeTe, carrier compensation for various solutes 3=25365
 Hf borides, carbides and nitrides 1=3707
 Hg, up to 160°C at const. volume 3=23902
 HgSe, mag. field effects, parameters of electron transport theory 0=11730
 HgSe—HgTe system 1=17813
 HgTe, power, 77°-400°K 4=10063
 HgTe, 100-320°K 4=7087
 HgTe—CdTe, power, rel. to composition 3=17890
 HgTe—MnTe alloys 3=20335
 InAs, at low temps. 2=23398
 InAs, at low temps 3=6596
 InAs, 100-600°K, and effective electron mass 3=17970
 InAs, p-type 2=16724, 18707
 InAs—CdSnAs₂ alloys 3=2915
 InAs—In₂Se₃ 1=19881
 (In, Ga)As, thermoelec. power, carrier conc. depend. 0=2897
 In₂O₃, power, 180°-460°K 3=2918
 InP, thermoelec. power, 90°-700°K, rel. to electron effective mass 4=30622
 InP, undoped, Seebeck effect meas. 4=12662
 In₂S₃, meas. 4=20374
 InSb 1=14530
 InSb, degenerate n-type, effective electron mass 4=1613
 InSb, electron effective mass det. 2=18757, 21204
 InSb, at m.p., and liquid state 0=624
 InSb, 195-715°K 1=7649
 InSb, p-type, rel. to valence band and hole scatt. 3=22947
 InSb, power, effect of mag. field, in n-type 4=1700
 InSb, rel. to pressure up to 18 000 atm. 4=1699
 InSb, review 0=13614
 InSb, thermo-e.m.f., 125 to 500°K 1=1074
 InSb, thermo e.m.f. theory 2=14556
 InSb—CdTe ($\leq 3\%$) 4=20373
 InSb, GaSb, equimolecular, temp. depend. 0=15959
 InSb—In₂Se₃ 1=19881
 InSb—Sb eutectic alloys 3=23401
 In₂Te₃, force and cond. 2=23399
 In₂Te₃, effect of pressure 0=13615
 In₂Te₃, thermoelec. power 1=2415
 K and alloys, at low temps., expt. and theory 1=17814
 K, characteristic power of boundary atoms 3=17968
 KCl 2=8455
 KCl, fused 3=9477
 La hexaboride, thermoelectric power, temp. depend. 1=5005

Thermoelectricity—contd

- LaCoO₃, doped with Sr or Th 2=23400
 LaCoO₃, Seebeck coeff., anomalous var. with temp. 4=28616
 La₂S₃, 20-1000°C 4=4161
 LaTe_{1.7-2.0} 4=4240
 Li alloys, with Mg, In, Al, at low temps. 2=6509
 Li₂Ni_{1-x}O, mixed-valence material 2=10547
 Mg—Cd, thermoelectric power 1=14531
 Mg₂Ge_xSi_{1-x}, 250°-600°K, meas. 3=13142
 MgMn₂O₄, cation migration process meas. 4=26052
 MgO, power and n-type elec. cond. 4=22705
 Mg + 0.1% Mn, below 100°K 2=6510
 Mg₂Si, Seebeck effect, phonon processes 2=16761
 Mg₂Si—Mg₂Sn, solid sols. props. 2=8453, 14593
 Mn ferrites, Seebeck, Verwey hopping mechanism 4=12905
 Mn ferrite, thermoelectric power near Curie pt., anomaly 4=17492
 α-Mn, mag. Brillouin zone effects 3=20555
 MnAl₃, thermoelec. power 0=20948
 MnB 3=1124
 Mn—Ni alloy, e.m.f. rel. to zone structure of Ni 1=19914
 Mn—Ni alloy, e.m.f. rel. to zone structure of Ni 2=6506
 MnO₂ (pyrolusite), anomaly at Curie temp. 1=7690
 MnP and MnP₂, temp. dependence 0=10008
 Mn—Si alloys, Seebeck effect 3=871
 MnSn₂, thermoelec. power 0=13577
 MnTe, magnon drag, contrib., errata 4=26161
 MnTe, thermoelectric power, magnon drag contribution 4=15576
 MnTe₃ 1=3769
 Mn—Zn ferrites 2=8454
 Mo borides, carbides and nitrides 1=3707
 Mo, reactor-grade, 4-120°K 0=11588
 MoSe₂—WSe₂ polycryst. system, Seebeck coeff. 4=22720
 MoTe₃—WSe₂ polycryst. system, Seebeck coeff. 4=22720
 Na, meas. rel. to martensitic transformation 2=12551
 Na—K alloys, liquid 3=145
 NaCl containing CdCl₂ 3=13143
 NaCl doped with CdCl₂ and Cl₂ gas electrodes, calc. 1=1112-13
 NaCl, fused 3=9477
 NaCl, X-ray coloured 3=813
 NaNO₂, rel. to ferroelec. theory 2=4091
 Na₂WO₃ 2=2116
 Nb borides, carbides and nitrides 1=3707
 α-Nb₂O₅, nonstoichiometric composition 3=23026
 Nb₂O₅, W-doped 2=16729
 Ni, defects distrib. study 1=14247-8
 Ni ferrites, with Mn impurity 2=6471
 Ni, thermoelectricity below 1°K 0=18076
 Ni, rel. to vacancies and dislocations, activation energy study 1=14254
 NiB 3=1124
 Ni₃Co, ordering detected at 773°C 0=16355
 Ni—Cr solid solutions, rel. to composition 1=5034
 Ni—Cu alloys, power variation in magnetic fields 3=20427
 Ni—Cu alloys, thermoelec. power variation with mag. field 1=9020
 Ni_{0.2}Cu_{0.8}Fe_{1.9}Mn_{0.2}O₄, Seebeck voltage 4=26055
 NiMn ferrite, 100-500°C 4=30670
 Ni_{1-x}Mn_{2+x}O₄, rel. to composition 3=13078
 NiO, thermoelectric measurements 1=17755
 NiO—CuO—Li₂O system, effect of sintering 2=6465
 Ni₂O₃·xH₂O and semiconducting type 4=4333
 Ni—Ti solid solutions, rel. to composition 1=5034
 Ni—V solid solutions, rel. to composition 1=5034
 Ni—Zn ferrites, power 3=20336
 Np, power, 20°K-room temp. 2=12552
 Np, temp. var. down to liquid He temps. 4=6918
 Np, thermoelectric power meas., 300-900°K 0=11657
 Np, thermoelectric power rel. to temp. 4=17542
 Os—As or Sb—S, Se or Te 4=26056
 Pb dilute alloys, at low temp., role of phonon drag 1=6070
 Pb oxide layers 2=6501
 PbBiSe₂ 2=21155
 PbBr₂, fused 3=9477
 PbCl₂, fused 3=9477
 PbS layers, mono- and polycryst., thermo-e.m.f. 4=26051
 PbS, n- and p-type, 4-100°K 0=18080
 PbS, p- and n-type, thermoelec. power, room temp. to 700°K 1=6184
 PbS photosensitive surface, thermoelectric power 1=7673

Thermoelectricity—contd

- PbS, pressure depend., up to 9000 kg cm⁻² 3=22948
 PbS, sensitized surface, majority carrier model 2=6499
 PbS, thermoelectromotive force, rel. to elastic strain 3=10832
 PbSe films, doped with Ag, thermoelectric power 1=8956
 PbSe, 4-100°K 0=18080
 PbSe, force rel. to impurities, 90° to 430°K 2=23401
 PbSe, thermoelec. power, effective mass of carriers 0=20947
 PbSe, thermoelectric power, temp. variation 0=20946
 PbSe, thermoelectromotive force, rel. to elastic strain 3=10832
 PbSe—Bi₂Se₃ system, thermal e.m.f., rel. to composition 3=25742
 PbSe—Sb₂Se₃ system, thermal e.m.f. rel. to composition 3=25741
 Pb—Sn liquid alloys, thermo-e.m.f. 4=21153
 PbTe 2=14592
 PbTe, e.m.f. rel. to temp., theory and expt. 1=19916
 PbTe, e.m.f. rel. to temp., theory and expt. 2=4082
 PbTe, 4-100°K 0=18080
 PbTe, impurity influence 2=3857
 PbTe, impurity influence on e.m.f. 1=19729
 PbTe, n-type, Seebeck coeff., 20°-550°K 4=22813
 PbTe, p-type 2=6467
 PbTe, rel. to Pb and Te precipitation 2=10491
 PbTe, power, rel. to semicond. props. 0=6089
 PbTe, pressure depend., up to 9000 kg cm⁻² 3=22948
 PbTe, rel. to temp. 77° to 900°K 1=17750
 PbTe, thermoelectromotive force, rel. to elastic strain 3=10832
 PbTe:AgSbTe₂, mixed crystals, superiority to PbTe 4=4239
 PbTe—SnTe system alloys, Seebeck coeff. 4=23275
 Pd, alloyed with Cu, Sn or Fe, at low temps. 1=3796
 Pd alloys, at low temp. 2=6508
 Pd, H-desorbed 2=14488
 Pd, thermoelectricity below 1°K 0=18076
 Pt, alloyed with Cu, Sn or Fe, at low temps. 1=3796
 Pt alloys, at low temp. 2=6508
 Pt, power, effect of lattice defects 4=20435
 Pt, power, effect of quenching and work hardening 2=23486
 Pt, thermoelectricity below 1°K 0=18076
 Pt—Mo alloys, thermo-e.m.f. 2=23880
 Pu and δ Pu—Al rel. to order-disorder change 1=20622
 Pu, power, 20°K-room temp. 2=12552
 Pu, temp. var. down to liquid He temps. 4=3918
 Pu, thermoelectric power determination 0=18082
 α Pu, thermoelectric power at low temp. 4=15435
 Pu, thermoelectric power rel. to temp. 4=17542
 PuC, thermoelectric power 4=4175
 PuC, thermoelectric power from 4.2°-1200°K 4=28416
 PuO_{1.7-2.0} 4=12938
 Rb, and alloys, low temps. mechanism 3=23027
 Rb, thermoelectricity below 1°K 0=18076
 Rb—K alloys, liquid 3=145
 ReSi₂, thermal e.m.f. 3=872
 Rh—Fe alloy, anomalous decrease, 1°-50°K 4=15525
 Ru—As or Sb—S, Se or Te 4=26056
 Sb₂Bi_{2-x}Te_{3-y}Se_y system 1=19867
 Sb—Cd, welded contact, thermoelec. inversion 0=16000
 SbI₃ 4=1624
 Sb—Mg, welded contact, thermoelec. inversion 0=16000
 Sb₂Se₃, thermoelec. power 0=620
 Sb₂Te₃ films, meas. 3=8514
 Sb₂Te₃, temp. depend. 2=8351
 Sb₂Te₃—Bi₂Te₃ solid sol., power and efficiency 2=4079, 8449
 Sb₂Te₃—Bi₂Te₃, thermoelec. power, composition depend. 0=16001
 Sb₂Te₃—Bi₂Te₃, thermoelec. power, temp. depend. 0=18079
 Sb₂Te₃:Bi₂Te₃, thermoelectric power, temp. variation 1=17810
 SbTeI 4=1624
 SbZn—SbCd 0=16002
 Sc against Cu, thermo e. m. f. meas., anisotropy of Sc single crystals 4=10143
 Se, with Br, Cl, I impurities, temp. depend. 0=1675
 Se, thermoelec. power 0=11717
 Se: Au, thermoelec. power 0=11717
 Se—Te solid solutions 3=22952
 Si, rel. to hot current carriers 3=10791

Thermoelectricity—contd

- Si, properties in magnetic field 1=8932
 Si-Co 0=13604
 Si-Cr alloys, composition depend. 1=3797
 α -SiC, effect of phonon drag 2=16764, 18758
 Si-Mn, temp. depend. 0=2884
 SmB₆ 0=13468
 SmS, thermo-e. m. f., 80°-1700°K 4=30626
 Sn anisotropy due to Brillouin zones 4=26015
 Sn selenide-Ge telluride, thermoelec. power, temp. depend. 1=1043
 Sn selenides, thermoelec. power, temp. depend. 1=1043
 Sn telluride-Ge selenide, thermoelec. power, temp. depend. 1=1043
 Sn tellurides, thermoelec. power, temp. depend. 1=1043
 Sn-In single crystals, anisotropy, low temp. 4=10144
 SnO₂ films, temp. depend. 1=10051
 SnO₂, 100°-900°C 4=6990
 Sn_{1-x}Se_x, max. figure of merit 3=20423
 SnSe₃ 1=14475
 SnTe, anomalous, rel. to band structure 3=17973
 SnTe, meas. rel. to stoichiometry 3=6604
 SnTe, and semicond. props. 4=15577
 Sr₂FeO₃F, Seebeck coeff. 4=1823
 SrO, (BaSr)O, cathodes, and conductivities 3=17969
 SrTiO₃, dielec. props. 3=2957
 SrTiO₃, 4.2°-300°K meas. 4=15559
 Ta borides, carbides and nitrides 1=3707
 Ta electrolytic capacitors 2=11598
 Te, rel. to band structure 2=16628
 Te, effect of phonon drag on current carriers 0=6149
 Te, effective mass of hole carriers 3=23028
 Te films, amorphous, pure 2=8284, 14500
 Te, at low temp. 2=16765, 18760
 Te, molten, meas. and charge-transfer model 4=2707
 Te, Peltier effect, use in crystal growth 1=20438
 Te, thermoelectric power, intrinsic and extrinsic regions 1=17448
 Te and Te-Se liquid solns. 3=3813
 TeI 4=1624
 Te-Mg, welded contact, thermoelec. inversion 0=16000
 Th, power, 20°K-room temp. 2=12552
 Th, temp. var. down to liquid He temps. 4=6918
 Th, thermoelectric power rel. to temp. 4=17542
 ThC, thermoelectric power 4=4175
 ThC, thermoelectric power from 4.2°-1200°K 4=28416
 ThS 4=26162
 ThSe, p-type single crystals 0=18054
 Ti borides, carbides and nitrides 1=3707
 Ti carbide 1=14532
 Ti silicides 2=8305
 TiC 2=8305
 TiC single crystals 1=11260
 TiC-TiN 2=18649
 TiO, power, 80°-400°K 3=17894
 TiO₂ (rutile) rel. to conduction mech. model 2=23413
 Ti₂O₃, thermoelectric power 1=11310
 TiSb₂, thermoelec. power 0=13577
 TiSe 2=18712, 23410
 Tl₂SeAs₂Te₃, vitreous 3=20418
 U, phase transition in α -type at 42°K 1=15135
 U, power, 20°K-room temp. 2=12552
 U, temp. var. down to liquid He temps. 4=6918
 U, thermoelectric power determination 0=18082
 U, thermoelectric power rel. to temp. 4=17542
 UC, thermoelectric power 4=4175
 UC thermoelectric power from 4.2°-1200°K 4=28416
 U-Mo alloy, γ -phase, rel. to Friedel band model 1=17450
 U-Mo alloys in γ -phase, thermoelectric power, 4°-40°K 4=28388
 UO₂, nonstoichiometric 1=17641
 US and US-ThS solid solns. 4=26162
 V borides, carbides and nitrides 1=3707
 V carbide 1=14532
 V, 4.2°-340°K, rel. to mag. transition 3=13140
 VO_x ($x=0.75-1.74$), composition depend. 0=18353
 V₂O₃, Seebeck effect 2=10496
 V₂O₃, power, rel. to nuclear irradi. 2=18761
 VSb₂, thermoelec. power 0=13577
 V₃X intermetallic cpds. 4=1701
 W borides, carbides and nitrides 1=3707
 W, reactor-grade, 4-120°K 0=11588
 WO₃ 3=13083

Thermoelectricity—contd

- W_xTa_{1-x}Se₂, Seebeck coeff. 3=23029
 Y hexaboride, e.m.f., against Cu 0=1879
 Zn antimonide 2=4042
 Zn, by He temps. meas. 3=8492
 Zn, at liquid He temp. 0=13581
 Zn thermo e.m.f. in circuit of deformed and undeformed regions 1=7679
 Zn_xCd_{1-x}Sb 4=12918
 Zn_xCd_{1-x}Sb, effects of Te, Cu, Sn doping 0=2903-4
 Zn_xCd_{1-x}Sb, Seebeck coeff. 2=23487
 Zn_xCd_{1-x}Sb solid solns., power, meas. 2=23415
 ZnGeAs₂ 3=8518
 Zn + 0.1% Mn, below 100°K 2=6510
 ZnSb, 4.2-300°K 2=657
 ZnSb, Seebeck coeff. 2=23487
 ZnSb, thermoelec. power 0=15967
 ZnSb-CdSb, solid solns. ordering 2=18762
 ϵ -Zn₃Sb₂, 20-470°K, discontinuities due to phase transformations 3=20346
 Zn₃Sb₂, rel. to semiconducting props. 3=15597
 β -Zn₃Sb₂, semiconducting temp. var. 3=22956
 ZnSnAs₂ 3=8518
 ZnSnAs₂, p-type, optical energy gap 2=23417
 Zn in Zn salt solns., and heat of reaction 4=7768
 Zr borides, carbides and nitrides 1=3707

Thermoluminescence

(Heading introduced in 1961)

- alkali halides, α -irradiated, kinetics 4=13084
 alkali halides, correl. with elec. cond. 2=23624
 alkali halides, efficiency 2=23625
 alkali halides, interactn. of activators 2=23626
 alkali halides, simple model 4=10210
 alkali halides, by spectrophotometer, rapid scanning, automatic 3=18992
 alkali halides, effect of TL glow curves and emitted spectra 4=10209
 alkali halides, after X-irrad., origin 3=3073
 anhydrite, effect of impurities 1=20035
 anhydrite, emission centres 4=4291
 anthracene, adsorbed and trapping 4=20497
 apparatus 3=3871
 aragonite, emission centres 4=4291
 biochemicals, after γ -irradiation 2=14758
 borax, fused, seeded with Ni, Mg, UO₃ 2=10634
 calcite, emission centres 4=4291
 calcite, trapping levels meas. from colour centres 4=28725
 diamond, semiconducting, type IIb 1=19993
 diamond, thermal rel. to optical activation 3=20547
 dolomite, emission centres 4=4291
 dosimetry of atomic bomb radiation 3=12611
 excitation mode effect on light output 2=23623
 glass, heating apparatus for meas. 3=6685
 glow curves, exper. study techniques 1=6243
 guanidine aluminium sulphate hexahydrate, γ -irrad. 2=14759
 hyperbolic glow curves, apparatus 3=3917
 ice, γ -irradiated, investigation 4=5196
 ice, rel. to stress and cryst. history 3=13649
 induced by annealing in crystals 1=7731
 magnesite, emission centres 4=4291
 measurement with double-beam spectrometer 4=16232
 platinocyanides, and non-monomolecular processes 3=18030
 polyethylene, γ -irrad., effect of oxygen 3=4995
 polyethylene, γ -irrad., glow peaks meas. 3=4994
 polymers, γ -irrad., glow peaks meas. 3=4994
 powder sample holder for uniform temp. 4=30694
 quartz 3=11020
 quartz, synthetic, sector distrib. of luminescence centres 4=20486
 reaction-kinetic evaluation of glow curves 1=6244
 Rochelle salt, γ -irrad. 2=14759
 ruby, γ -irradiated 3=23128
 sapphire, golden, after γ -irrad. 2=10634
 spectrophotometer, rapid scanning, automatic 3=18992
 theoretical models, appl. 2=8548
 trapping centres, capture cross-section 2=6299
 tyrosine, rel. to surface area and environmental gas press. 3=18052
 wolfram ate phosphors, decay obs. 2=6613
 Al₂O₃, α -phase, after γ -irrad. 3=3072

Thermoluminescence—contd

- Al₂O₃, sapphire, flash light excitation, colour centre decay process 4=30696
 α -Al₂O₃, γ -irrad. high pressure effect 3=23129
 α -Al₂O₃:Mn⁴⁺ 2=14712
 BaF₂, recomb. nature and capture levels 4=28728
 BaTiO₃, X-irrad. 3=968
 Ca carbonates and sulphates 2=8597
 CaCO₃, X-irrad. 2=4085
 CaF₂, natural, and synthetic doped or undoped 2=2264
 CaF₂, recomb. nature and capture levels 4=28728
 CaF₂:Mn, use in γ -ray dosimetry 1=1994
 CaF₂:Mn, temp., Mn, Cl ions, var. 3=23127
 CaF₂:Y and CaF₂, radiative recombination from electron-hole pairs, theory 4=17600
 CaO: Sm, impurity effects on glow peak 4=28729
 CaS, rel. to exoelectron emission and trapping levels 2=16877
 CaSO₄, hydrated and anhydrous phases 2=16876
 CaSO₄-Mn, thermoluminescence rel. to exo-electron emission 3=2013
 CaSO₄: Sm 4=28730
 CaSO₄, Sm-activated, appl. to dosimetry 1=16621
 CaSO₄-Sm, exoemission rel. to thermoluminescence 3=2013
 CdI, six maxima curve, 100°-180°K 2=12636
 CdS, Cu-doped, rel. to trapping maxima 2=4195
 CdS, rel. to defect states 2=8207
 CdS, reaction-kinetic evaluation of glow curves 1=6244
 CsBr, X-ray, u. v. excited 4=30697
 CsI: Cu, In, Ag or Tl, trapping levels are due to host 4=22917
 I crystals, after X-irrad. at low temps. 3=6653
 In₂S₃, mechanism 3=20515
 KBr, effect of F or V-band illumination 4=7176
 KBr, effect of plastic deformation 3=23130
 KBr phosphors with activators, recombination spectra 4=15615
 KBr, and plastic deformation 4=17588
 KBr, strained, pure or Tl doped 3=18054
 KCl, F colour-centres, effect of impurities 3=20246
 KCl, effect of F or V-band illumination 4=7176
 KCl, γ -irrad. 2=12638
 KCl, at low temp. 1=14663
 KCl, quenched, rel. to vacancy pairs process 4=17606
 KCl strained, pure or Tl doped 3=18054
 KCl rel. to surface area and environmental gas press. 3=18052
 KCl, u. v. and X-irrad. 2=12639
 KCl, In, Ga or Tl doped 4=13081
 KCl(Tl), u. s. and visible glows 2=8595
 KI, effect of F or V-band illumination 4=7176
 LiF, activated by uranyl nitrate 2=18861
 LiF, crystals and powders, meas. 2=20013
 LiF, for dosimetry 3=17116
 LiF, effect of X-irradiation 1=20051
 LiF, γ -irrad., low-temp. meas. 4=20482
 LiF, γ and neutron-irrad., impurity effects 3=11018
 LiF radiation dosimeter 3=19511
 LiF, rel. to thermal bleaching and colour centres 2=16668
 LiF, X- and γ -ray exposure, rel. to dosimetry 2=16097
 LiF, effect of X-ray irradi. and heating 3=8479
 Mg, fluorogermanate, with and without Mn 3=18053
 MgF₂: Mn, after X-ray stimulation 2=2265
 Mn⁴⁺ in α -Al₂O₃ 4=26236
 N, solid, after electron bombardment at 4.2°K 2=12637
 NaCl coloured crystals, spectral composition 1=14662
 NaCl, effect of annealing 1=17925
 NaCl, effect of F or V-band illumination 4=7176
 NaCl, on irradiation, rel. to mag. props. 2=6653
 NaCl, at low temp. 1=14663
 NaCl, shocked 4=22923
 NaCl, rel. to thermal bleaching and colour centres 2=16668
 NaCl, effect of X-ray irradi. and heating 3=8479
 NaCl, γ -irrad., effect of Ca doping 3=11017
 NaCl, rel. to surface area and environmental gas press. 3=18052
 NaCl, X-ray stimulated, imperfections mech. 2=6606
 NaCl:Ag, NaCl:Cu, effect of Ca, Sr, or Cd admixtures 1=20033

Thermoluminescence—contd

- NaCl:Ca 4=12961
 NaCl:Ca, influence of Cu, Ag 2=8563
 NaCl with Cd, Na addns., X-ray coloured 3=813
 NaCl: Cd, 300-700°K 1=4998
 NaCl:Co 2=6607
 NaF, crystals and powders, meas. 2=20013
 SO₂ in Ar, shock excited, chemi 4=26747
 SiO₂, doped, prod. by X-ray irradi., bleaching 4=15499
 SiO₂, silica with < 1% Al, rel. to heat treatment 4=4306
 SrF₂, recomb. nature and capture levels 4=28728
 ThO₂, effect of γ -irrad. 2=8596
 ZnO, characteristics, rel. to preparation 3=8633
 ZnO, rel. to Cu impurities 2=6648
 ZnS, electron trap depths rel. to activator conc. 1=14661
 ZnS, glow curves, rel. to trapping levels 3=11019
 ZnS, rel. to impurities 3=20528
 ZnS, origin 1=18917
 ZnS phosphor, neutron irradiation and ageing, effects 4=28741
 ZnS, reaction-kinetic evaluation of glow curves 1=6244
 ZnS, trap parameter determination 1=7732
 ZnS:Cl, cubic crystals 2=4178
 ZnS: Cu phosphor, neutron irradiation and ageing, effects 4=28741
 ZnS:Cu, Al luminor, light sums rel. to electroluminescence 3=3074
 ZnS:Cu, ZnS:CdScu, and dielectric props. 4=4284
 ZnS:Cu: Fe, photodielec. effect 2=21283
 ZnS:Ga phosphors 3=23131
 ZnS, Tl-, Cu- and Ag-activated 2=10623

Thermomagnetic effects

- Sn-Pb eutectic layers, specific heat, and supercond. proximity effect 4=18612
 Sn-Pb, molten, ultrasound velocity 1=5276
 Sn-Pb soft solders, specific heats 1.3°-20°K 4=6744
 Sn-Pb, striation and cellular substructures during solidification 2=23862
 Sn-Pb(0.87%), superconducting phase transformation, filamentary, complex susceptibility detection 4=414
 Sn-Pb supercooling, nuclei number, effect of e.m. stirring, var. with mag. field 4=5455
 Sn-Pb-Sb, X-ray fluorescent analysis 2=17035-6
 SnPt, Mössbauer effect 4=25820
 SnS, composition stability limits on anion rich side, quenching effects 4=13468
 SnS, evaporated films, electron diffr. study from 30°-450°C 4=29189
 SnS films, sputtered, resistivity, photoconductivity, transmittance, rel. to temp. 4=20810
 SnS, mass spectrometer study of thermodynamics 2=20877
 SnS, p-type, reflection spectrum analysis 2=2217
 SnS, prep., elec. and optical props. 1=17760
 SnS semiconducting properties 1=17759
 SnS₂, dislocation ribbons, geometry, surface influence 3=17734
 SnS₂, stacking faults, ribbons and extended jogs 4=9977
 Sn₂S₃, cryst. struct. 2=23848
 Sn_{1-x}Se_x, max. thermoelec. figure of merit 3=20423
 SnS_(1-x)Se_x, mixed crystals, prep., props. 2=14940
 SnSb, Mössbauer effect 4=25820
 Sn-Sb, striation and cellular substructures during solidification 2=23862
 SnSb₂Te₄, cryst. struct. 2=4426
 SnSe, composition stability limits on anion rich side, quenching effects 4=13468
 SnSe, elec. props. and effect of heat treatment 1=17761
 SnSe, thermal expansion, second order phase transition 1=14935
 SnSe, vapour pressure and heat of sublim. 3=21637
 SnSe₂, semicond. props., 2=2174
 SnSe₃, semiconducting props. 1=14475
 (SnSe)_{1-x}(SnTe)_x(PbTe)_y, crystal structure 0=18364
 Sn-Ta, Sn-In films, crit. current temp. var., > Sn 4=21426
 SnTe, anomalous thermoelec. power 3=17973
 SnTe band structure, exptl. investig. 3=10841
 SnTe, crystal structure and semiconducting props. 4=1622
 SnTe, elec. props. rel. to stoichiometry 3=6604
 SnTe, Hall coeff. and elec. cond., 4.2° to 295°K 3=10829
 SnTe, Mössbauer effect 4=25820
 SnTe, optical props. 0.5-25 eV meas. 4=13042
 SnTe, overlapping of valence and cond. bands 3=25233
 Sn-Te phase diagram near SnTe 3=6861
 SnTe, phase transformation, high press. 4=17770
 SnTe, solid sols., with GeTe and PbTe 2=17055
 SnTe, thermoelectricity, and semicond. props. 4=15577
 SnTe, vapour pressure and heat of sublim. 3=21637
 SnTe(g) and Te₂(g) in equilibrium with SnTe(c), partial press. 4=24462
 Sn-Te-Zn, effect of surface-active and surface-passive additives in Sn 0=18261
 Sn-Tl, electronic structure by X-ray diffraction 1=11578
 Sn-Tl, grain boundary segreg. of Tl 3=16118
 Sn-Tl, 300-500°C, surface tension 0=19088
 Sn-Zn, liquid, X-ray structure study 1=12861
 Sn-Zn alloy coatings, electrodeposited, struct. 2=2401
 Sn-Zn alloys, 2-phase transition temperature 3=13540
 Sn-Zn, liq., density rel. to temp. 2=9255
 Sn-Zn-Bi system, miscibility gap, calc. from thermodynamic functions 1=142
 Sn-Zr, structure 1=6528

Titanium

- adsorption of Cl₂ and TiCl₄ 2=19120
 adsorption of O₂, temp. var. 4=23612
 atom, μ -mesic, 2P \rightarrow 1S transitions, theory 4=3822
 atom, μ -mesic, X-ray transition energies 3=6370
 atoms, oscillator strengths 0=20590
 atoms, TiI, high-excitation relative f-values 0=15666
 atoms, 218 faint spectral lines, 3341-4186Å 4=15292
 $\beta \rightarrow \alpha$ phase transformation 4=26569
 bombarded with Na⁺, K⁺, Rb⁺, Cs⁺, backscatter rel. to temp. 4=8854

Titanium—contd

brittleness, due to H 2=8744
 cathode, fluorescence yield by X-ray photoeffect
 meas. 2=14704
 cathode, fluorescence yield by X-ray photoeffect
 meas. 3=6663
 cavitation fracture resistance, rel. to phase comp.
 and struct. 2=21441
 clean and contaminated surfaces, secondary electron
 emission 4=21566
 cold-shortness of technical purity Ti 4=10403
 condensation in vacuum, microheterogeneous 2=1308, 7468
 conductivity thermal, below 1°K 4=6757
 crystal structure, α and β -phases, rel. to oxide structures
 and ω -alloy phases 0=16310
 deuterium ion introdn. into metal 2=13606
 diffusion coefficient of He³ 1=10011
 diffusion, gaseous, in N₂ elec. arc 2=5319
 diffusion, in liquid cast Fe, by electrolysis 3=5431
 diffusion in liquid Cu, rel. to rate of soln., expt. 4=8194
 diffusion of metals, mechanisms 3=20233
 diffusion, self, thermal, high temps. 3=22828
 diffusion, of solute elements in b.c.c. phases 2=6375
 diffusion of substitutional elements 1=17552
 diffusion of Ti⁴⁺, activation energy, frequency factor,
 temp. effect 4=28492
 diffusion of V⁴⁺, activation energy, frequency factor,
 temp. effect 4=28492
 dispersions with enriched B for reactor use,
 charac. 0=14057
 e.s.r. of Ti³⁺ in TiO₂(rutile) 4=28887
 electric cond., 20-850°C 2=20952
 electrical resistivity rel. to 4 at.% Al, Mo, Cr, Re, Pd, Ta,
 La additions 4=22687
 electrodeposition from aqueous solns. 3=16176
 electron emission, secondary, effect of absorbed
 gases 3=4183
 electron emission, secondary, fine structure rel. to
 incident angle of primaries 1=4640
 as electron microscope replica of alloys, resolving
 power 0=3290
 electron secondary emission 2=3077
 electrophoretic deposition and fusion to substrate 4=7789
 emissivity meas., 100-900°C 0=8834
 evaporation by heat, in getter-ion pump 2=15656
 evaporation by ionic pump 2=7264
 films, activated gas sorption 0=10374
 films, electron emission, secondary 4=3037-8
 films, gas sorption characteristics 1=18480
 films, optical constants in vacuum u.v. 1=19940
 films, optical transmission and electron
 absorption 0=21247
 films, use in production of high vacua 4=16157
 films sprayed, ultralow press. prod. by gas
 sorption 2=19628
 films, sputtered, elec. props. and structure 3=25328
 films, for tritium targets 0=8280
 films, work function 2=9612
 foils, nuclear targets, reducing Mo impurity 4=3233
 foils prep., as isotope targets 2=17978
 getter 0=3573, 5059
 getter, in miniature vacuum pump 0=14700
 grain boundary absorption, superhigh plasticity 1=14883
 granular structure, after annealing 0=14055
 grid emitting properties 0=7134
 Hall effect, effect of preferred orientation 3=22906
 impurity in α -Fe₂O₃ (haematite), effect on mag.
 transition 2=16887
 i.r. properties, rel. to electron groups 3=17977
 internal friction, cold-worked metal 2=21407
 internal friction, recovery on annealing after cold
 working 4=7461
 ion pumps 1=18481
 ion-sorption vacuum pump, design 4=16156
 ionized gas, opacity calcs. 2=15651
 ions, polyatomic, up to Ti₅ rel. abundances 2=9533
 ions, Ti III, (3d)² config., multiplet, effect of electron
 correl. 4=15274
 ions, Ti³⁺, in corundum, e.s.r., theory 3=23237
 ions, Ti³⁺, in corundum, spectra 2=14677
 ions, Ti³⁺, e.s.r. in glasses 2=21376
 ions, Ti³⁺, e.s.r. in glasses 3=3179
 irradiation growth 2=20995

Titanium—contd

lattice const. of α -phase at high purity 2=21514
 lattice expansions, and Debye temps. 0=1909
 lattice stability, b.c.c. and h.c.p. modifications, free energy
 differences 0=15800
 layers, on Be and Ag bases, secondary electron
 emission 1=4637
 layers, on Be and Ag bases, secondary electron
 emission 1=10734
 liquid, surface tension meas. 4=2643
 μ^- -mesic atom, decay anomalies, search 3=2593
 optical absorbance and emittance, rel. to ion
 bombardment 4=20472
 optical const. and oxide film growth 2=7370
 optical emissivity, from 1100°K to melting point 4=28702
 ordering of α -phase containing O 3=6815
 oscillator strengths from vortex-stabilized
 arc 1=11072
 oxidation, in air and H₂O vapour, scale formation
 and structure 1=12661
 oxidation, effect of O₂ formed during TiO₂
 reduction 4=23643
 oxidation, 500°C, electron microscope study 3=18434
 paramagnetic susceptibility rel. to temp., theory 1=12520
 phase change, resistivity effect 2=4451
 phase transformation, calorimetric meas. 2=21548
 phase transformations, solid-solid, 0-90 kbar 3=20887
 photoelectric emission, by polarized X-rays 3=14630
 photoelectric emission, quantum yield 1=4634
 photoelectric emission, quantum yield 1=10730
 photoelectric emission yield for 1.54-13.3 Å
 X-rays 1=13109
 point defects, prod. by low-temp. plastic deformation,
 mobility 1=12380
 positron annihil., two-quantum, effect of adsorbed
 H 4=28433
 preparation and ductility, by iodide refining 2=21480
 recrystallization at 882°C 1=10227
 refl. coeff. rel. to refr. index and absorpt. coeff.,
 23.6-113 Å 4=22846
 refractive index and absorpt. coeff. in quantum-transitions
 range 4=15601
 sample containers for radioactivity meas. 3=19905
 scattering amplitudes for slow neutrons, for
 Ti⁴⁶⁻⁵⁰ 0=9684
 secondary electron emission, and inelastic electron
 scatt. 2=1492
 sheets for cathodes in sputtering-ion pumps 4=21191
 single crystal elastic moduli and h.c.p. \rightarrow b.c.c.
 transformation 4=26530
 solar and stellar abundances 1=15451
 solubility in Be, X-ray diffrac. study 3=20908
 sorption, photo, of H₂, methane, after adsorption of
 O₂ 4=23612
 specific heat, low temp., and supercond. search 4=27436
 specific heat, 1.1°-4.5°K 3=15437
 specific heat, 600-1345°K 3=22660
 spectra, balance and abundance in stellar and solar
 photosphere 0=14414
 spectra, in solar photosphere 0=14415
 spectrum, in CaF₂, SrF₂, BaF₂, after 2 MeV β irradi.,
 d¹ 4=10167
 sputtering, under Cs ion bombard., cathode sputtering
 ratio 4=24753
 Sputtering by D ions, 10 to 25 keV 3=449
 stacking faults 0=552
 sublimation and evaporation, getter-ion pumps 4=18270
 supercond. transition temp., effect of Fe in dilute
 solutions 1=3882
 superconducting films prep. by "protected
 sputtering" 4=18587
 superconducting transition temp., effect of Cr, Mn, Fe, or
 Co in solid solution 0=1079
 superconductivity, Mn impurity effects on crit.
 temp. 4=5528
 surface, catalytic action in atomic beam recomb. 2=4522
 surface phenomena at interphase boundary with Ni
 and Co 4=8190
 surface roughness, electrolytic meas. 2=10933
 thermal cond., 20-850°C 2=20952
 thermal expansion, effect of alloying 4=17375
 thermal expansion, 1.5-12°K, electronic and lattice
 contri., and Grüneisen parameters 4=17370

Titanium — contd

- thin film, gettering action for hydrogen 2=5078
 trace in Zr, spectrochem. det. 2=23983
 transformation, spurious 4=10440
 tritides, thermionic ideal gas functions and isotope exchange functions 1=9418
 u.v. spectrum 1=4905
 X-ray absorption, fine structure of fund. edge in BaTiO₃ 0=15809
 X-ray absorption spectrum 1=7720
 X-ray characteristic absorption 1=14621
 X-ray emission spectra, in several compounds 0=5889
 X-ray emission spectrum 0=20736
 X-ray K absorption edges, in Ba titanates, rel. to ferroelec. props. 0=1739
 X-ray spectra, emission and K-absorption 0=20595
 X-ray spectrum, emission 4=22899
 Young's modulus data, rel. to temp. 4=30788
 C in, diffusion, 1223-1923°K 4=1519
 use in H pressure regulator 4=14232
 H₂ sorption, at low pressures 0=6427
 α -Ti, self diffusion 4=1518
 Ti α , self-diffusion 4=30579
 α -Ti, thermal electron transitions, rel. to anomalous props. 3=20127
 Ti II, d² p config. 1=806
 Ti³⁺ e.s.r. and spin-lattice relax. in corundum 4=26436
 Ti³⁺, electron spin resonance and relax. in corundum 0=13873

Titanium compounds

- anatase, X-ray absorption spectrum 1=7720
 borides and carbides, thermoelec. power with Cu 1=12465
 brookite (TiO₃), phase transformation due to neutron irradiat. 4=26564
 carbide, thermoelectricity 1=14532
 ceramics, elec. breakdown 0=1713
 cermet, temperature dependence of elastic constants 1=10202
 complex ceramics, practical use as electrets 3=6622
 complex ferroelectric titanates 1=14560
 dielectric props. of non-stoichiometric rutile 3=2955
 mixed titanate system, piezoelectric props. 0=1714
 nitile, slightly reduced, Hall coeff. meas. 4=15541
 oxide films, p-n junction photovoltaic effect 4=4237
 oxides (lower), semicond. props. 2=23412
 oxides, X-ray spectra, emission bond type and K β , line changes 3=23092
 paramagnetic, Ti³⁺ cpds., moments and Weiss consts. 4=26274
 rutile ceramics, ageing, conductivity changes 1=17637
 rutile ceramics, ageing, defect concentration changes 1=17638
 rutile ceramics, dielec. props., current and temp. depend. 1=1138
 rutile, Cr³⁺ doped, maser, cross-relax 3=14798
 rutile, Cr³⁺ spin-lattice relaxation time 1=6422
 rutile, cross-doping agents for masers 1=7788
 rutile, effect of O₂ press. on thermoelec. and elec. props. 1=19917
 rutile, elec. props. rel. to O₂ pressure 3=15596
 rutile, far i.r. dielec. props. 3=15687
 rutile, i.r. absorption of single crystals 1=14602
 rutile, point-defect relaxation 3=25265
 rutile (TiO₂) polarization and space-charge-limited current 3=895
 rutile, X-ray absorption spectrum 1=7720
 sulphate, sol. for γ -ray dosimetry 2=20291
 titanate ceramic, electrical ageing study 1=12659
 titanates, absorption, light, with exponential var., multi-phonon process 4=22835
 titanates, crystal formation by vacuum evaporation 1=2526
 titanates, degradation, exo-emission study 0=10932
 titanates, dielectric properties rel. to neutron irradiation 1=12475
 titanates, dielectric props. 0=13645
 titanates, elec. breakdown strength 0=1709
 titanates, relaxation polarization 1=14520
 titanates, various, permittivity, variation with temp. 2=21219
 titanates, various, permittivity, variation with temp. 3=2953
 titanium carbide, etching, 'Mondrian' precipitation 1=7842

Titanium compounds—contd

- X-ray spectra, emission, bond type and K β , line changes 3=23092
 BaTiO₃, domain growth, kinematic theory 1=11344
 BaTiO₃, domain structure, interferometric study 1=11340
 BaTiO₃, lattice vibrations rel. to ferroelectric transition 1=19928
 BaTiO₃ type ferroelectrics, props. and use in dielectric resonance amplifiers 1=19925
 PbTiO₃ in BaTiO₃, ferroelectric meas. 1=17843
 SrTiO₃ in BaTiO₃, ferroelectric meas. 1=17843
 Ti acetyl-acetate, Ti³⁺ g-factor 2=18947
 Ti alloys, β - ω martensitic transformation 3=8892
 Ti alloys, β , phase transform. to martensitic α , stress induced 4=17771
 Ti alloys, cavitation fracture resistance, rel. to phase comp. and struct. 2=21441
 Ti alloys, dilute, bulk superconductivity meas. 4=18613
 Ti alloys, elec. cond., temp. depend. 4=28537
 Ti alloys, elec. and thermal cond., 20-850°C 2=20952
 Ti alloys, dilute, supercond. resistivity and magneto-elec. props. 2=15854
 Ti alloys, hardenability 4=23218
 Ti alloys, ω -phase 2=4440
 β -Ti alloys, ternary, superconductivity 4=18614
 Ti beryllide, X-ray emission spectrum 0=20736
 Ti boride, X-ray emission spectrum 0=20736
 Ti borides, carbides and nitrides, elec. props. 1=3707
 Ti caesium sulphate alum, mag. behaviour 0=16127
 Ti carbides, X-ray emission spectra 0=5889
 Ti ceramic, conductivity, electrical, var. during ageing 3=20380
 Ti dihalides, linear symmet. mean amplitudes of vibr. and Bastiansen-Morino shrinkage effect 4=30441
 Ti, 5- and 6-component, temp. — mech. props. relationship 0=4552
 Ti hydride, gas generator, gas evolution anal. 0=12440
 Ti hydride, nonstoichiometric, proton magnetic resonance 0=18230
 Ti hydrides, Hall effect, 77°-300°K 3=13026
 Ti hydrides, X-ray emission spectra 0=5889
 Ti, lattice stability, b.c.c. \rightleftharpoons h.c.p. reaction 0=15800
 Ti, mech. props. under hydrostatic pressure 0=18271
 Ti monoxide, structural and geometric relations with α and β -Ti and ω -alloy phases 0=16310
 Ti nitrides, X-ray emission spectra 0=5889
 Ti oxide anodic films, graded p-n junctions 3=4929
 Ti oxide film on metal, structure meas. 4=15808
 Ti oxide, in M-type stars 3=11574
 Ti oxide, thin film diodes 3=17915
 Ti oxides, elec. cond., composition depend. 0=6128
 Ti oxides, films, photovoltage 0=9998
 Ti oxides, films on Ti, composition and structure study, elec. methods 4=26714
 Ti oxides, physical props. 0=20967
 Ti oxides, scale on Ti, structure 1=12661
 Ti oxides, surface films, chemisorption and photo-desorption 0=6423
 Ti silicide, X-ray emission spectrum 0=20736
 Ti silicides, prod., Hall const., elec. cond., thermo-e. m. f. 2=8305
 Ti solid solns. with Co, Rh and Ir, superconductivity 4=8575
 Ti, structural and geometric relations with α and β -Ti, δ -Ti oxide and Ti monoxide 0=16310
 Ti tri-dipyridyl 3.5 tetrahydrofuran, space group 2=23859
 Ti tritide foils, H³ concn. depth variation, from H³(d,n)He⁴ reaction 1=5792
 Ti(III) complexes, e.s.r., h.f.s. of Ti^{47,49} 2=3775
 Ti³⁺ alum, susceptibility, theory, nature of crystalline fields 0=8034
 Ti³⁺ caesium alums, mag. susceptibility 0=18167
 Ti³⁺ hydrated salts, paramag. behaviour 3=6691
 Ti³⁺ ions in hydrated crystal, paramagnetic relaxation, effect of charge transfer 1=9061
 Ti³⁺ salt sols., paramag. reson., hyperfine struct. 2=21925
 Ti³⁺ salt solutions, paramagnetic resonance hyperfine structure 1=18434
 Ti³⁺ salts, e.s.r. of solns. in alcohol and glycerine 1=18433
 Ti-Al alloys, elec. cond., 20-1200°C 4=28536

Titanium compounds—contd

- Ti-Al alloys, three phases 3=13502
 TiAl, crystal lattice parameters 1=20465
 Ti-Al, three phases meas. 3=13502
 TiAl₃, hot-hardness 2=2337
 Ti-Al-Co, ageing and mech. props. 3=18354
 Ti-Al-Co, mech. props., precipitation effects 3=18204
 Ti-Al-Si, phase study 2=17045
 Ti-6 Al-4 V optical absorbance and emittance, rel. to ion bombardment 4=20472
 Ti₃Au crystal structure, atomic, change from Cr₃Si to Cu₃Au by O, N or C impurities 4=13606
 TiAu₂-Au system, phase diagram and cryst. struct. 2=17031
 TiB₂, anisotropic thermal vibrations 0=13488
 TiB₂, elastic constants 1=11501
 TiB₂, heat of formation, by calorimeter 1=16170
 TiB₂, "pest" degradation 4=29169
 TiB₂, quadrupole bond, n.m.r. meas. and calc. 3=11121
 Ti-B-Al, Young's modulus and tensile strength 3=11132
 Ti_xB_{1-x} (B = Re, Ru, Os, Rh, Ir, Pd, Pt) supercond. and paramag. suscept. 2=2961
 TiBO₃, with calcite structure, X-ray evidence 4=29105
 TiBaO₃, ferroelectric permittivity, during switching 1=17840
 TiC, elastic constants 1=11501
 TiC, elastic deformation, plastic flow, and dislocations 2=6731
 TiC, elec. cond. and thermoelectricity of single crystals 1=11260
 TiC, epitaxial growth of TiO₂ 3=5092
 TiC, Hall effect and resistivity 2=16684
 TiC, heat of formation, by calorimeter 1=16170
 TiC, use as heater for metal vacuum evap. 2=6850
 TiC, infiltration by liquid Cu-Ni alloys 4=8145
 TiC, plastic deformation, effect of temp., strain rate, surface and composition 4=15718
 TiC powder, emissivity 0=16919
 TiC, prod., Hall const., elec. cond., thermo e.m.f. 2=8305
 TiC, resistance, rel. to vacancy scattering of electrons 4=26017
 TiC, sintering by elec. resist. change 2=6842
 TiC, surface phenomena at interphase boundary with Ni and Co 4=8190
 TiC, temperature dependence of elastic constants 1=10202
 TiC, thermal conductivity, 200°-2000°C 4=20227
 TiC, thermal diffusivity meas., 1300°-1650°C 4=6754
 TiC, thermal expansion, 26° and -196°C 4=1405
 TiC, thermionic emission, 1300°-1900°K 3=16974
 TiC, X-ray characteristic absorption 1=14621
 TiC, X-ray reflection intensities, effect of heat treatment 2=823
 TiC₂, crystal structure 3=1321
 TiC_{Ni-x}, Hall effect, carrier density 4=17479
 TiC-TiN, elec. props. 2=18649
 TiC and TiN, expansion, thermal rel. to at. vibr. amplitudes 4=17376
 TiC-WC-Co alloys, compressive strength, effect of composition and structure 4=15720
 TiC-WC-Co alloys, ultimate tensile strength 4=26532
 TiC-WC-Co cermet alloys, strength and hardness 1=6468
 TiC-WC-Co, mech. props. and structure 3=18184
 TiC-WC-Co, structure, elec. and mech. props. 3=3316
 TiC-WC-(TaC), W diffusion 3=25295
 TiCl, vibrational struct., 4200 Å region 2=18459
 TiCl₂, crystal structure 3=16076
 TiCl₃-δ, X-ray diff. theory model 2=10837
 TiCl₃, magnetic transition 1=14671
 TiCl₃, monodimensional disorder 2=12904
 TiCl₄, binary systems with SnCl₄, CCl₄, SiCl₄, dielec. props. 2=19578
 TiCl₄, chemisorption on Ti, Pt and Ni 2=19120
 TiCl₄, Raman line intensity, temp. var. 1=15879
 TiCl₄, Raman spectra in crystalline state 3=15696
 TiCl₄, Raman spectrum, second-order 1=848
 TiCl₄-Ar mixtures, neutral Ti emission behind reflected shock waves 3=11836
 TiCl₃, 6H₂O, e.s.r. of Ti³⁺ 2=10706
 TiCl₃, 6H₂O, glycerine sol., spin-lattice relax. 2=15617, 17483

Titanium compounds—contd

- TiCo, magnetization 0=1788
 TiCo, ordering in intermediate phase 0=18352
 Ti-Co, specific heat, low temp., and supercond. search 4=27436
 Ti-Co-Ni, electronic specific heat 2=14382
 Ti-Cr alloy, hardness, effect of heat treatment 3=20879
 Ti-Cr alloys, elec. volume resistivity 3=22898
 Ti-Cr, atomic diffusion of Cr 0=20844
 Ti-Cr system, b.c.c., Kirkendall effect 3=4887
 Ti-Cr system, investigation of Cr-rich region 4=13504
 Ti-Cu, ageing 0=16353
 Ti₂Cu, Ti₃Cu₂O, crystal structure, atomic 4=7648

 theorem for estimating eigenvalues 0=2066
 two-fold spectral representation of $f(z_1, z_2)$ 0=6540

Transformations, mathematical—contd

- Mellin transforms, appl. to problems of statistical mechanics 1=11715
 Mollier to enthalpy-composition diagram 4=8531
 optical functions 1=4432
 physical equations to non-dimensionally parametric form 1=5116
 Poisson transform. of

$$\sum_{j=1}^N F(\cos 2\pi j/N) \cos 2\pi j n/N$$
 3=21196

- polyphase systems invariant to transitions to symmetrical components 4=18027
 q-Laplace, q-difference eqns. 2=15450
 real massless scalar wave eqn. of second order 1=13313
 relativistic conformal, physical interpretation 2=15469
 rotational transforms in stellarator theory 2=13576
 scanning operators and generalization of Huygens' principle 2=21786
 shell-model calculations, tables of transformation brackets 1=13600
 similarity function for pattern recognition 1=15389
 Talmi, for particles with diff. masses 3=5972
 Taylor to Lagrange; rel. to pot. field continuation 4=27025
 theorem for estimating eigenvalues 0=2066
 two-fold spectral representation of $f(z_1, z_2)$ 0=6540

Transistors

- See Semiconducting devices, transistors

Transition metals

(Heading introduced in 1961)

- adsorption, field electron micro. study 3=3369
 adsorption isotherm and equilibria with hydrogen 4=10619
 alloys, binary, superconducting T_c and electronic state densities 4=16352
 alloys, superconducting, cold-rolled, high-field critical currents, giant anisotropy 4=16338
 alloys, superconducting, critical fields rel. to low and high current densities 4=16337
 alloys, f.c., low-temp. specific heat 4=12639
 antiferromagnetism, indirect exchange interaction 1=3917
 atoms, d-bands, electron correlations 4=9895
 atoms in dilute solid solution, mag. moments, effect on susceptibility and supercond. transition temp. 1=3882
 b.c.c., metals, cold-worked, dislocation relaxation spectra 1=7821
 band structure, ferromag., elec. cond. var., review 4=30543
 complex phases, electronic struct. 2=7197
 complexes, free, electronic structure 3=15331
 conductivity, elec., high temp. var. 4=22688
 crystal electron struct. and supercond., review 4=20229
 crystal electron structure 4=6681
 electron distrib. det. in 4d band 2=21260
 electron distribution 1=3639
 electron heat capacity, group isoenergetic transitions 2=581
 electron structure and mag. props. 3=2755
 electron structure, from n.m.r., review 4=12669
 electron theory, review 3=17676
 electron theory, review 4=22519
 electron transfer in aqueous soln. 3=8943
 ferromag. direct exchange theory, suitability 3=981
 ferromag., statistical props. of electron system 1=14218
 ferromagnetic, charge carriers, itinerant electrons 4=13130
 ferromagnetic, n.m. relax. 4=23032
 ferromagnetic, optical Hall effect and inner mag. field 4=13039
 ferromagnetic, theory of neutron diffrn. phenomena 3=25540
 ferromagnetism, Correlated electron wave function in 3-d band as ground state 3=15769
 ferromagnetism, effect of electron correl. 4=17660
 first-row, radial wave-functions for atoms and ions 2=6084
 fluorescence excitation by X-rays 3=953
 Green functions method 2=21343
 group I, charact. X-ray absorption 2=8546
 halides, thermal expansion at low temps., expt. 4=17369
 Heisenberg exchange interaction between neighbouring atoms 2=10294

Transition metals—contd

- imbrittlement, rel. to neutron irradi. 3=8784
 impurities in CdS, i.r. absorption 1=11380
 ion complexes, e.s.r. line-shapes of polycrystalline samples 4=26434
 ions in crystals, line spectra, vibration effects 4=4244
 ions, exchange polarization and magnetic behaviour 3=977
 ions in MgO and Al₂O₃, effect of pressure on spectra 1=14589
 ions in silicate glasses, site preference energies of ions 4=26535
 ions in soln., e.s.r. linewidths 4=29646
 ions, spectroscopy, for laser appl. 3=7330
 ions in TiO₂, e.s.r. 4=26432
 ions, zero-field splitting 3=25164
 iron series, energy bands, APW calc. 4=17402
 lanthanide complexes, weak covalent bonding 4=1276
 ligand field spectrum, cubic, three-electron 3=25166
 liquid, electronic struct. 2=7197
 MA₂(d¹)-type, e. s. r. and microwave spectra, rel. to inversion splitting 4=10332
 magnetic dipole moments from asymmetry index 2=14214
 magnetic moment of transition metals in simple metals 2=12754, 14760
 magnetic props., from μ -mesic atom study 1=17298
 magnetic susceptibility, electronic sp. ht. 3=25509
 magnetic susceptibility, temp. variation 1=14679
 magnetism, exchange integral, sign 4=13224
 magnetism model, magnetic couplings 1=7738
 melting points, periodicity and T_c 3=7386
 metals in first long period, formation of solid solutions 1=20623
 metals, Ti to Cu, characteristic electron-energy losses 1=6101
 nuclear magnetic relaxation 3=25595
 nuclear spin relax. due to core polarization, theory 4=13334
 paramagnetic susceptibilities, rel. to group isoenergetic transitions 2=582
 plastic flow yield at low temps. 4=26472
 resistance meas., d.c. induction method 2=2965
 solid solutions, lattice parameter—composition curves 4=10490
 solution in liq. Al, kinetics 3=16614
 superconducting binary phases, specific heats and mag. props. 4=16340
 superconducting, rel. to densities of states and localized moments 4=399
 superconducting, specific heats meas. 3=7405
 superconductivity, contrast with non-transition, isotope effects, mag. mechanism 4=16376
 superconductivity, rel. to electron density 2=7197
 superconductivity, hard, explanation, review 4=18564
 superconductivity, isotope effect 4=395
 superconductivity rel. to magnetism, Hamilton—Jensen theory modification 4=29832
 superconductivity mechanisms 4=400
 superconductivity, s—d interaction 3=5593
 superconductivity of solid solns., survey 1=11882
 superconductivity theory 4=29831
 superconductivity, two-band model 3=9678
 superconductivity, under pressure 4=16366
 superconductivity, review 4=18615
 surface energy, temp. depend. 4=28339
 theory, s—d exchange model ferromag., antiferromag. 4=12668
 thermal electron emission, work function 1=13103
 thermoelec. powers, large, low temps. 2=653
 X-ray emission and absorpt. spectrum interpretation 4=22852
 X-ray K absorption, theory 2=23580
 X-ray scatt., Compton incoherent functions 2=14984
 Cr group de Haas—van Alphen effect up to 18 kG 4=7211
 Cr group, electronic band structure 3=6492
 Cr³⁺, Mn²⁺, Co²⁺ e.s.r. in SrTiO₃ 4=26383
 Fe group, K absorpt. edge, fine structure 2=16842-3
 Fe group, X-ray absorption spectra, inter-electron interaction effects, calc. 2=704
 Fe group, X-ray spectra, K _{α} and satellites, temp., crystal var. 3=25475
 Gd³⁺, Pr³⁺ e.s.r. in LaAlO₃ 4=26383
 in MgO·Al₂O₃ crystals, as impurity ions, energy spectrum calc. 3=20130

Transition metal compounds

(Heading introduced in 1961)

- alloys, anomalous properties 3=10715
 alloys, band structure, ferromag., elec. cond. var., review 4=30543
 alloys, crystal electron struct. and supercond., review 4=20229
 alloys, dilute, magnetism, review 4=20513
 alloys, with dissolved Fe atoms, local mag. moments 2=4197
 alloys, localized electron spins 3=8393
 alloys, magnetic susceptibility, electronic sp. ht. 3=25509
 alloys, magnetism, exchange integral sign 4=13224
 alloys, paramag. susceptibility, rel. to temp. 3=999
 alloys, supercond., H_{c2} temp. var. 4=18617
 alloys, supercond. transition temps., specific heats 4=18616
 alloys, superconducting, upper crit. fields 3=3949
 alloys, thermoelec. power at low temps. 2=6508
 b.c.c., diffusion of solute elements 2=6375
 band structure of b.c.c. transition metals 2=6300
 borides, superconductivity 4=14525
 bromates and iodates of 3d ions, antiferromagnetism, nucl. quadrupole resonance study 1=7807
 carbide solid solns., C atom charges 4=12573
 carbides, C atom charges 4=12573
 carbides, elec. props. meas. rel. to electronic struct. 2=3993
 carbides, use as thermionic emitters 4=14743
 chlorides, in dimethylformamide, equil. 2=15153
 cohesive forces, rel. to d orbitals 2=12364
 complexes, e. s. r., review 4=3902
 complexes, ionic radii, spin—orbit coupling and geometrical stability 1=3554
 complexes, octahedral, u.s. absorption, reson., for polarization prod. 4=16182
 conduction, elec. and band struct. 4=15517
 covalent complexes, fine structure of K-absorption spectra 3=8609
 crystal electron states, narrow band, spin correl. 4=12683
 crystal field splitting rel. to next-nearest neighbour ions 2=23034
 cyano complexes, overlap integral calculation 3=10529
 diatomic molecules, MO description 4=20030
 diborides, nuclear magnetic resonance 3=10541
 difluorides, NaF freezing pt. depression 4=5454
 dihalides, i.r. spectra 2=14274
 elec. conductivity, rel. to crystal internal fields 3=4798
 ferromagnetism and antiferromagnetism, rel. to covalent bonding 1=1202
 ferromagnetism weak, spin coupling types 4=23009
 fluorides, F¹⁹ n.m.r., contrib. of unpairing of 1s electrons to h.f.s. 1=9071
 germanides, crystal structure atomic 4=7602
 group I silicides, charact. X-ray absorption 2=8546
 halides, semicond., elec. behaviour rel. to overlap integrals magnitude 2=23412
 hydrides, interatomic interaction 1=891
 hydrides, nonstoichiometry and lattice defects 2=3898
 hydrides, phases, rel. to adsorption 4=10619
 impurities of Fe, paramag. 2=21294
 impurities in wurtzite-type crystals 2=3908
 ions, diffusion in single-crystal MgO 2=14466
 ions, impurities in corundum, e.s.r. 2=3811
 intermetallic cpds., interatomic distances, calc. as atomic radii sum 4=23488
 ion complexes, ligand nuclei hyperfine interactions 4=25718
 luminescence, on ligand field theory basis 4=26249
 magnetic ion interaction, superexchange model 3=11032
 magnetic susceptibilities and g-values. 1=10128
 magnetic susceptibility and Knight shift, theory 2=3869
 magnetic susceptibility, thermo e.m.f., electrical conductivity meas. 4=1550
 metal-pentacyanonitrosyl complexes, optical spectra 2=6570
 molecular complexes MX₅, d-electron splitting calc. 4=3851
 monosilicides, cryst. struct. 2=6809
 monoxides of group III, bonding correl. 4=12528
 niobates, struct. and spin config. 2=6814

Transition metal compounds—contd

- octahedral complexes, spin-electronic-vibr. calc. 4=20072
 optical rotation, ligand field approx. 3=23046
 orbitals, empty, 4p, localization, X-ray K-edge splitting 3=25175
 oxides adsorbed on alumina, effect on Al^{27} n.m.r. 4=7342
 oxides and carbides, metal-metal bond screening effects 4=22450
 oxides, classification 4=25890
 oxides, conduction mechanism by internal friction meas. 3=10836
 oxides, crystal structure, atomic 4=7603
 oxides, electron structure and elec. props., review 4=25890
 oxides, h.f. dielec. props. meas. 2=10556, 14601
 oxides, prep. using CO-CO₂ atmospheres 4=15840
 oxides, semicond., elec. behaviour rel. to overlap integral magnitude 2=23412
 oxides, semicond., impurity energy levels 2=23308
 oxides and sulphides, pressure effects on elec. conds. 3=25370
 oxides, vacancy interaction energies 3=22737
 phosphides, binary, crystal structure 3=13453
 polarized spectra in cryst. trisoxalatometallates 1=19976
 pyrite struct., cond., elec., and struct. details 4=20336
 with rare earths, antiferromag. coupling 2=12749
 semiconductivity, crystal chemistry approach 2=6447
 silicides, characteristic X-ray absorption 1=14622
 silicides, elec. cond. and Hall effect 1=3709
 silicides, elec. cond., thermoelec. power and Hall effect 1=5004
 silicides, Hall effect, mag. props. 1=3716
 silicides, ternary G and E, crystal structure atomic 4=7602
 solid solns., supercond. peak effect 4=18563
 solid solns., superconducting, size factor 3=16871
 solid solutions, magnetic props. and superconducting 3=15747
 sulphides, groups IV, V, VI, crystal structure, atomic, review 3=23449
 sulphides, semicond., elec. behaviour rel. to overlap integral behaviour 2=23412
 sulphides, surface area meas., isotope exchange method 2=9225
 sulphides, thermodyn. props. 2=17084
 tantalates, struct. and spin config. 2=6814
 3d transition metal—Al b.c.c. binary and ternary alloys, specific heat, low temp. meas. 4=30518
 thermodynamic props. 2=10967
 transition-simple metal alloys, mag. scatt. of neutrons 2=12787, 14797
 trifluorides of 4d elements, mag. ordering, neutron diffr. study 1=1251
 ultrasonic absorption, in octahedral complexes, resonance absorption, with inversion splitting 3=25195
 Al-transition metal, atomic interaction 4=6679
 with B, C, Si, N, thermal electron emission, work function 1=13103
 Fe group with Al or Si, X-ray K absorpt. spectra and wave-function by hybridization 4=7144
 Nb₂M₄O₉, (M = Mg, Mn, Fe, Co or Ni), magnetic structure determination 1=2535
 with NiAs structure, elec. cond. 4=26043
 Si-transition metal, atomic interaction 4=6679
 Ta₂M₄O₉, (M = Mg, Mn, Fe, Co or Ni), magnetic structure determination 1=2535

Transmission

- air, of heat, nearwater vapour bands 4=12471
 bending and torsional waves, in beam structs. and grillages 4=24286
 black body radiation, surf. charact. 2=127
 elastic waves through plate joints 4=24295
 inhomogeneous anisotropic media, ray paths 2=9362
 radiation, isotropic, across interface between two dielectrics 4=10147
 radiative transfer, three-dimensional solns. 4=5109
acoustic waves
 See also Acoustic wave propagation
 acoustic materials, rel. to mounting conditions 2=17561
 airborne transmission-loss meas. of partitions 4=5331
 Arctic Ocean, 90-km test. 3=25864
 attenuation in deep ocean, 20-1000 c/s 4=7818
 attenuation, interaction between sound field and flow 2=2829

Transmission—contd**acoustic waves—contd**

- between rooms, stereo-ambiophonic 2=15703
 in bones of skull, curve of audibility 4=4981
 circular and slit-shaped apertures in walls, formulae 4=11316
 coal mines, hammer blow signals 3=14284
 double-wall soundproofing, freq. depend. 4=29723
 elastic cylindrical shell, sound field, calc. and expt. 4=5311
 electrostatic waves in plasma, collision damping 3=16929
 explosive sounds in sea water 4=4752
 floors, ceilings, and walls of buildings 0=1018
 light partitions, field measurement 1=18543
 light-weight walls, high transmission loss, coupling of adjacent mass elements 1=220
 liquid layer, spherical transient waves 4=5310
 liquid-liquid interface, transient spherical wave 2=15689
 loss in field, meas. 4=14291
 metals, attenuation at low-temp. 0=19581
 ocean, short-range transmission in shallow water 4=23725
 plate with interjacent supports, theory 4=11303
 porous sound absorbers, rel. to flow resistance 4=2785
 random medium, array bearing angle variance 4=27267
 in randomly inhomogeneous medium, freq. depend. 2=19652
 in sea-water, 160-200 kc/s 3=21029
 shallow water, long-range, bottom reverberation 2=2830
 shallow water, long-range, signal-level fluctuations 2=2831
 shallow water, long-range, theory 2=19655
 shallow-water, rel. to environment 2=17555
 shells, spherical elastic 2=7296
 SOFAR channel, South Atlantic, distance meas. 3=11386
 across solid-liquid boundary 0=2198
 speech-transmission circuits, evaluation 2=15426
 static and dynamic losses of partitions 3=18954
 structural resonance of wall between two rooms 4=27274
 in superconducting state 2=7515
 suspended ceiling systems 1=18542
 through flow velocity discontinuity 0=16781
 through a membrane, ideal, stretched 4=21242
 through plate, periodically inhomog., in liquid 2=21973
 transmission structures, reflection and cut-off 1=16028
 underwater, effect of ocean waves 3=11385
 underwater meas. 4=7819
 in water shallow, long-range losses 1=18519

acoustic waves, ultrasonic

- aniline-cyclohexane mixtures 0=19131
 in bones of skull, curve of audibility 4=4981
 at boundary surfaces 1=8180
 delay lines 2=5109-10
 layer-symmetric wall 2=15688
 liquids, forces in u.s. field 2=9346
 meas., pulse technique 1=2825
 piezoelectric emitters, transfer coeffs. 2=2818
 quartz plate, transmission coeff. meas. 1=2825
 into water through 3 μ Al film 3=18934
 CdS, amplification and phonon Cherenkov rad. 4=15410
 CdS, under d.c. voltage and illumination 2=3833
 KCl crystals at low temp. 0=21098

electromagnetic waves

See Electromagnetic wave propagation

light

- See also Absorption, light; Filters, optical
 absorbing plate, optically active, isotropic 3=16788
 aerosols, calc. of particle size distrib. 4=7783
 alkali metal halides, 17-55 μ 0=6167
 along surfaces 4=27324-5
 ammonium dihydrogen arsenate and phosphate, u.v. 0=13686
 anthracene, exciton absorption region 0=13678
 atmosphere, contrast reduction by turbulence 3=6962
 atmosphere, meas. instrument 0=4783
 atmosphere, mol., plane-parallel homog., higher-order scatt. 4=17894
 atmosphere in Nevada Desert 1=9187
 atmosphere, nonuniform, bounded by reflecting surface 4=16243
 atmosphere, radiative transfer due to ozone 2=2484

Transmission—contd

light—contd

atmosphere, turbidity, variations meas. 2=2488
 atmospheric "windows", 0.4-4.0 μ , rel. to atm.
 model 4=23762
 attenuator, rotating-sector, for precision
 spectrophotometry 2=5162
 blood cells, red 1=21112
 boundary of two media, rel. to polarization 2=5476
 chemical analysis, oximeter, cuvette, blood,
 allowing for light scattering 3=13943
 clouds, i.r. 0=14302
 coherent, through plasmas 3=12138
 conducting layers, reciprocity of transmission 2=7374
 contrast function, meas. using gratings 3=268
 corundum, in far u.v., rel. to cutting angle, chromium
 content and temp. 4=7126
 crystal, plates optically active, in axial classes 2=19731
 crystal plates, transparent, rel. to
 polarization 2=15750
 crystalline plates, principal vectors soln. 3=15649
 crystals, absorbing, circular optic axes 3=15648
 crystals, mag. absorbing optically-active 3=13148
 crystals, nonlinear dielec. polariz. mech. 2=14650
 crystals, transparent uniaxial, inhomog. waves 3=15642
 diamonds, semiconducting, rel. to temp. 4=28642
 diffuse, by inhomog. plane layer, brightness
 coeff. 2=21991
 diffuse, by plane layer in turbid medium 2=21855
 diffusing layers 4=324
 effect of surface light traps 1=4470
 Elsasser band 3=15322
 film projection systems 1=8218
 films, dielec., metallic, summation formulae 2=6551
 films, dielectric multilayer, automatic computation 0=10779
 films, meas. in vacuum u.v. region 1=11836
 films, negative absorpt. coeff., theory 2=19717
 films, optical density 3=20934
 films, reversibility princ., Maxwell eqns. theory 2=9397
 films, reversibility and reciprocity 2=13454
 films, solid 0=21247
 films, solid, polarized light rel. to defects 2=10580
 films, solid, and thickness and density meas. 4=13679
 films, use in thickness control during evap. 2=6851
 films, thin, organic, rel. to structure 4=4241
 films, thin, theory 1=13601
 films, very thin, inhomogeneous, theory 2=6550
 filters, linear, non-negative signals 3=3892
 filters, multilayer, for u.v. 2=7379
 fog, calc. of particle size distrib. 4=7783
 fogged salt windows, i.r. transmission 4=8438
 fogs, i.r. 0=10452
 glass coloured filters, for solar radiation
 research 0=16825
 glass, rel. to Fe content 1=14684-5
 glass, Pb, γ radiation loss reduction by heating 4=22861
 glasses, intensity (laser), elec. field effects 4=22862
 gold black deposits, transmittance, 15-100 μ 1=3813
 grating, sinusoidal, and irregular surface 3=258
 grating, sinusoidal profile, power calc. 4=18423
 guide, fibre, for plasma meas. 3=21808
 guided, coherent, by fibres, reflecting tubes, lense
 tubes 3=21510
 haze and fog 2=15198
 i.r., in atmosphere 3=11409
 i.r., through atmosphere, calc. 3=18550
 i.r. by atmosphere, review 3=3468
 i.r., 8-15 μ , selenide glasses 4=20457
 i.r. radn. in upper atmosphere 2=8973
 ice (sea), rel. to porosity and wavelength. 3=13650
 integrated, Fourier transforms eval., analogue
 computer 2=9371
 integrated, transmittance, error 2=17620
 integrating sphere for imperfectly diffuse
 samples 1=16053
 interference microscope measurements 0=6920
 interplanetary matter, rel. to models 2=11105
 irregular surface, and reflection, film appl. 4=1707
 Irtran-1, MgF₂ 3=20480
 lenses dioptré, imperfectly polished 4=18385
 lenses, extra-pupillary disturbances 2=5143
 by light-scattering layers with varying parameters 0=14846
 liquid through meniscus, passage meas. tech. 2=7181

Transmission—contd

light—contd

luminescent films, microcrystalline grains, film thickness
 depend. 4=26167
 meas., variable shutter device 1=18561
 measurement, optical systems, from source brightness
 change 4=21284
 medium of atoms emitting dipole and quad.
 radiation 2=9359
 metal-dielec. interface, boundary conditions 2=19718
 metal films, apparatus for vacuum study 0=19422
 metal films, appl. of Vasicek reversibility princ. 4=11333
 metal films, optical properties 1=10097
 metal films plasma resonance absorpt. 3=10634
 metal mesh refl. filters in far i.r. 4=307
 metallic films, granular structure, reflect. and
 transmission 2=5177
 metallic films, increase by blooming technique 2=7378
 metallic films, in near i.r. 2=6536
 metallic films, phase change rel. to apodisation 4=22840
 metallic films, rel. to thickness and oxidation 4=20801
 metals, extinction theorem, plasma theory 3=17049
 micas, muscovite, apparent optic angle 3=25463
 microscopic objectives, using highly refracting
 films 2=7351
 mirror in He-Ne 6328 Å laser, rel. to output
 power var. 4=21676
 monochromators, double 2=7355
 multilayer dielec. films, theory 3=14360
 multiple film systems 1=16096
 Nevada Desert atmosphere 2=2487
 nitrobenzene, i.r. 1=12883
 nitrobenzol, soln. in n-heptane, absolute
 coeff. 3=21367
 nonlinear theory, for partially coherent illum. 2=9369
 non-parallel radiation, medium with plane-parallel
 surfaces 3=5526
 opalescent media, by light from laser 3=269
 optical fibres 1=12976
 optical glasses, infrared 1=18579
 optical materials, infrared, bibliography 3=16750
 optical materials, 1900-3400 Å 4=14346
 optical signal amplification by medium with neg.
 absorption 2=17602
 optical systems, response function, grating
 meas. 2=2869
 optically active crystal, exciton absorption
 region 2=18808
 optically active crystals 1=16118
 optimum conditions, rel. to Beer's law 3=24041
 organic solvents in far i.r. 2=5023
 particle cloud, probability theory 2=120
 pile of plates, modified Lunelund and Stokes
 formulae 0=19378
 pile-of-plates polarizer 4=29774
 plane layer, transfer integral eqn. 4=14388
 plane-parallel layer, wave optics 3=9605
 plane-parallel layers 2=15737
 plane-parallel layers, nonlinear theory 3=16787
 polarized, through pair of birefr. plates 4=24399
 polyethylene, with C-black, 17-55 μ 0=6167
 polyethylene, in far i.r. 2=5023
 polymer films, optical retardation, continuous change
 meas. 1=19962
 polytrifluorochloroethylene, i.r. 0=12473-4
 powders, effect of adsorbed water, theory 0=3650
 projector systems using heat absorbing filters 1=8217
 quartz, in far i.r. 2=5023
 quarter-wave stacks 2=121
 quartz, 40-200 μ , 300-750°K 4=13053
 quartz, 50-120 μ 1=3817
 quartz wedge, effect on meas., 2-15 μ 4=20443
 radiation imaging technique, for thermal cond.
 meas. 2=2907
 Rayleigh line structure on passing through a liquid 3=3805
 rock salt, spectral depend. 2=18810
 ruby, in far u.v., rel. to cutting angle, chromium content
 and temp. 4=7126
 sapphire, in far i.r. 1=2438
 sapphire, i.r., 20°-1000°C 2=21237
 sapphire, white, u.v., linear temp. dependence 3=18010
 scattering, inverse problem, rel. to particle size 2=9407

 $\text{B}^{11}(\text{Li}^7, t)\text{N}^{15}$, 3.5 to 4.5 MeV ang. distributions 4=22220
 $\text{Be}^9(d, t)$ 0=9640
 $\text{Be}^9(d, t)\text{Be}^8$, ang. distrib. 0=17600
 Bi(d, t), triton spectra, rel. to nuclear structure 1=3397
 $\text{C}^{13}(d, t)\text{C}^{12}$, at 148 MeV, t ang. distrib. 0=5751
 C-p reaction at 154 MeV, spectra 2=1892
 from Cf^{253} spontaneous fission, energy spectra 1=748
 from D plasma in Scylla, velocity spectrum 0=13387
 H^4 , H^5 3=19714
 H^4 search in $\text{H}^3(d, p)$ 4=15110
 H^4 state with $T = 2$, no evidence from $\gamma + \text{He}^4 \rightarrow \pi^+ + T + n$ 4=12079
 H^3 prod. limits in Li $(\gamma, 2p)$ reaction 4=19747
 H^3 , H^4 unlikely because of He^8 5=19611
 and He^8 , e.m. form factor difference and mixed symmetry 4=16979
 $\mu^- + \text{He}^4 \rightarrow \text{H}^3 + n + \nu$ 3=14997
 from $\text{Li}^6(n, t)\text{He}^4$, angular distribution 4=17158
 in Li^6 photofission, energy spectra 4=25444

Tritons—contd

- $\text{Li}^{6,7}(d, t)$ 0=9640
 $\text{Li}^7(\gamma, t)$, ang. distrib. 2=7967
 Li^7 photodisintegration, spectrum and ang. distrib. 3=24921
 $\text{Li}^7(\text{Li}^{12}, t)\text{B}^{10}$, spectra 1=19533
 $\text{Li}^6(\text{Li}^7, t)\text{B}^{10}$, angular distribution curve 3=15167
 $\text{Li}^7(n, \alpha)\text{H}^4$, 14 MeV, search 4=21964
 $\text{Li}^7(\gamma, t)\text{He}^4$, energy distribution meas. 3=10249
 $\text{N}^{15, 60, 61}(d, t)$, ang. distrib. 2=1914
 $\text{O}^{16}-\text{Al}[\text{Ni}, \text{Ag}, \text{Au}]$ reaction, 167 MeV emission 4=22229
 Pb(d, t), triton spectra, rel. to nuclear structure 1=3397
 in Si, range-energy relationship 3=17113
 T (α, γ) Li^7 reaction 1=17151
 T + He^3 reaction, 460-1087 keV, ang. distrib. 4=6148
 T(d, n) He^4 , anisotropy factors, total neutron yield 4=9308
 T(d, n) He^4 , neutron polarization 3=676
 T(d, n) He^4 , 0.1-7.7 MeV, as source of polarized neutrons 2=293
 T(d, n) He^4 , neutron polarization, 4=30279
 T(d, n) He^4 , 1 to 3 MeV 4=30278
 T(d, n) He^3 , at 6-11.5 MeV, neutron ang. distrib. 1=7291
 T(d, n) He^4 , 3-19 MeV 4=19605
 T(p, n) He^3 , at 5-13.5 MeV, diff. cross-section 1=19294
 T(p, n) He^3 , neutron polarization 4=15063
 T(p, n) He^3 , at 3.4-12.4 MeV, neutron ang. distrib. 1=8520
 T(p, n) He^3 , 12-17 MeV, neutron polarization 4=6145
 T(p, γ) He^4 , at 5.8-9.2 MeV, γ -ray ang. distrib. 2=3419
 T $^3(p, n)\text{He}^3$, threshold energy, n-H mass diff. 0=20246
 T-T react. at 60-1140 keV, cross-sects. 3=6091
 $\text{Ti}^{46-50}(d, t)$ Ti^{45-49} , at 21.4 MeV, ang. distrib. 2=20670
 Ti(d, t), triton spectra, rel. to nuclear structure 1=3397
 $\text{Zr}^{91, 92, 94}(d, t)$; spectra 1=17149

Tungsten

- abrasion, theory 0=3164
 abrasion wear and friction 1=1353
 activity of faces and oxygen method of colour etching 4=2016
 adsorbed layers of KCl and Cl, kinetics 3=11323
 adsorption of alkaline earth atoms 1=20694
 adsorption of Ba and CO, rel. to work function 3=18394
 adsorption of BaO 2=17074
 adsorption of CO 2=8895
 adsorption of CO_2 0=751
 adsorption of CO_2 and O_2 , field effects in electron emission microscopy 0=5356
 adsorption of Cs ion, linear var. of adsorption energy with work function of W 4=29196
 adsorption-desorption of H_2 4=23608
 adsorption and desorption of Ge, field emission 3=8928
 adsorption, diffusion and evaporation of CO 0=3325
 adsorption, field emission micr. study 3=13568
 adsorption of H and Xe, rel. to surface features 3=3369
 adsorption of H_2 0=4748
 adsorption of, and interaction with, H 0=6424
 adsorption of N, heat of 0=3328
 adsorption of N and CO 2=8917
 adsorption of N, direct obs. 2=17072
 adsorption of N_2 and CO, sticking coeff., effect of surface coverage and temp. 4=17849
 adsorption of O_2 0=21297
 adsorption of O_2 2=23919
 adsorption of O_2 3=6887
 adsorption, surface structure influence 1=20742
 adsorption of water, 80°-400°K 2=8897
 adsorption of Xe and H_2 , effect on sintering 2=10946
 alkali ion pulse emission 0=9093-4
 α -irrad., damage 2=23947
 arc plasma-sprayed, sintering effects on props. 4=15719
 arc spectrum, isotope shifts 0=15667
 arc stability 1=1899
 atomic and electronic heat, 10-273°K 0=1561
 atomic scatt. factor, new approx. 2=19073
 atomic structure, relativistic self-consistent solution 0=9741
 atomically clean surfaces, production 0=8726
 atomization of H_2 , at W filament 0=9779
 atoms, WII spectrum, 2173 lines, 1756.6-6219.77 Å 4=22309
 band structure from X-ray spectra 3=4979
 bombarded with Na^+ , K^+ , Rb^+ , Cs^+ , backscatter rel. to temp. 4=8854

Tungsten—contd

bombarded with Ne, Ar, Kr and Xe ions, ionic entrapment and thermal desorption 4=13693
 bremsstrahl—isochromat, structure of short-wave limit 0=20593
 bremsstrahlung-isochromats, X-ray spectrum short-wave limit structure 1=6216
 brittle fracture, transition temp. rel. to grain size 1=11506
 cathode, laser-heated, thermionic emission 4=16521
 cathodes, Ba dispenser, W-based, emission fluctuations 1=16365
 cathodes, heated, field emission, elec. stability and life 0=9068
 cathodes, impregnated, metallic vapour poisoning 2=7642
 cathodes, improved life in mag. fields for a.c. heating by adding 3% Re 4=19083
 chemisorption on Cu, Ag, Au, Fe, Co, Ni, work function, bond 0=18452
 chemisorption of N₂ 1=1476
 chemisorption of N₂ 4=4702
 chemisorption of N₂, study with field emission microscope 4=13695
 chemisorption of O, 20° and 300° K 3=3396
 chemisorption of O₂, detector using work function prop. of W filament 4=10683
 cold worked, dislocation relaxation spectrum 1=7821
 cold-worked, elec. resistivity recovery 4=17480
 compressional, shear wave velocities 2=16942
 contact potential to niobium 4=6931
 counter-tube cathodes, spectral yield curve 0=9229
 cracks, at twin—grain boundary intersections 4=23136
 crystal dislocations, mobility on {110} planes 4=22591
 crystal growth by recrystallization 3=13541
 crystal growth from vapour 3=23406
 crystal spheres, sputtering by Kr ions 1 to 10 keV 2=3097
 crystal struct., atomic, likelihood ratio calc. 4=29143
 crystallite size and lattice strain in wires 2=6861
 cyclotron resonance 3=22692
 cyclotron resonance, 1.6° K 3=2777
 desorption of Ba by elec. fields 3=3360
 desorption of BaO by elec. field 4=7722
 desorption of Cs by elec. fields 3=3361
 desorption of Cs⁺ from, kinetics 2=17073
 desorption of H₂, O₂, and CO by electrons from field emitter points 4=23609
 desorption of K, in elec. fld, 77° to 1050° K 4=4675
 desorption of Rb, Mg, Ag ions by elec. fields 1=5105
 desorption of Th, due to electron emission 2=8896
 determination in W—Fe alloy 3=11278
 diffusion in α - and γ -iron 3=22818
 diffusion in Co, by electric current, 1100-1350° C 3=17782
 diffusion in Co—W alloy 1=14303
 diffusion and desorption of Th atoms, field emission, microscope study 2=10947
 diffusion and ionization of Cs 1=4569
 diffusion of Li^{6,7}, in polycrystalline ribbon 0=17976
 diffusion of O, activation energy determ. by internal friction 4=17446
 diffusion in W, TaC, TiC—WC, TiC—WC—TaC 3=25295
 diffusion in W—Mo alloys in elec. fields 1=4992
 diffusion in W—Mo alloys in elec. fields 1=11222
 diffusion in W(15 at.%)—Mo, electric field, effects 3=20237
 diffusivity, thermal, 1600-2960° C 4=15495
 dislocation etch pits 2=2350
 doped wires, secondary recryst., rel. to temp. and heating rate 4=10588
 ductility rel. to Cr 3=10655
 effect on $\gamma \rightleftharpoons \epsilon$ transformation in Fe—Mn alloy 4=10426
 elastic constants and spec. heat, 14-300° K 0=21103
 elastic const., 4.2°-300° K 3=13325
 elastic const., 77-500° K 2=14869
 electric cond., high temp. depend. 2=20953
 electrical resist. ratios, 1.4°-27° K meas. 4=20338
 electrochemical test for distinguishing from Mo and NiCoFe 3=9311
 electron emission, Auger, due to low-energy ions 4=3039
 electron emission in field-emission region, 4.2-400° K 1=18909
 electron emission, field, temp. depend. 2=13583
 electron emission by H⁺ ions at 1-30 keV 3=24347
 electron emission, due to He⁺, Ne⁺, Ar⁺, N₂⁺, Ca⁺ 1=16391

Tungsten—contd

electron emission, due to He⁺, two-process model 3=4182
 electron emission, field, energy distrib. 3=12232
 electron emission field, for 10⁻¹⁴-10⁻¹⁹ amp. 4=16519
 electron emission, induced by laser beam 3=19304
 electron emission, kinetic, due to 1-21 keV Cs ions 4=19095
 electron emission by ion bombardment 0=19806
 electron emission, secondary, with adsorbed Ba 2=1496
 electron emission, secondary, by positive ion bombard. 3=24346
 electron emission, secondary, and scattering 2=17878
 electron emission, secondary, with thermal emission current 3=24343
 electron emission of Th or Ba layers on W 1=16361
 electron emission in thermionic converter, rel. to CsF atmosphere 4=18662
 electron field emission, 10⁻¹⁹-0.1A, rel. to cryst. directions 3=14620
 electron field emission, time depend. 0=3783
 electron and ion emission, work function 2=17862, 20012
 use for electron-microscope shadowing 2=15119
 electron refl. and diffr., 1-206 eV meas. 3=7645
 electron reflection, low-energy, from clean surfaces and N and O monolayers 1=7099
 electron work function, for various crystal faces 0=15047
 electronic band structure, by De Haas—Van Alphen meas. 3=6492
 electrophoretic deposition and fusion to substrate 4=7789
 electrostatic electron emission, in pulse regime 0=15048
 emissivity, ribbon, var. with crystal structure 4=11324
 emissivity, spectral and total, and thermal cond., above 2300° K 0=14876
 energy band structure by isochromat meas. 3=15468
 enthalpy and heat capacity 0°-2400° C 2=12386
 enthalpy, 2400-2820° C 2=18528
 etch figures, electron microscope obs., of zone-refined W 4=9967
 etch figures, rel. to etching solution 3=20783
 evaporation in gas, rel. to heat dissipation rate 4=372
 evaporation of Th monolayer films on W 2=15088
 expansion, thermal rel. to at. vibr. amplitudes 4=17376
 explosions, flash lamp induced heating, compared with electrical, wire and strip 3=21628
 Fermi surface area from skin effect meas. 3=2757
 Fermi surface, by magnetoacoustic meas. 4=9906
 Fermi surface, magnetoelec. props. 4=4022
 field desorption of CO 4=7725
 field desorption of N and CO, corrosion 3=18396
 field emission through adsorbed inert-gas layers 0=19713
 field emission electrons, polarization 2=5368
 field emission, prior to destruction, by high-density autoelectronic current pulses 3=7630
 filaments, deformed, particle size and strain 3=25785
 filaments, electrically heated, transient characts. 3=14627
 filaments, hot, fluctuations 3=17821
 filaments, 1710-2500° K, in cold gases, energy exchange 3=24078
 film, elec. cond., from W hexacarbonyl vapour electron bombardment 4=26016
 films, heat treatment, structural changes 0=12086
 films, oriented or epitaxial, deposition 2=10806
 films, prep., props. 3=11316
 films, vacuum deposition, using spring-loaded conductors 3=9524
 films, work function 2=9612
 γ -ray absorption 1=7226
 grain boundaries, rel. to α -irrad. 3=17775
 grain boundary shown by field ion photomicrograph 4=9979
 heat capacity, at 100-3000° K 2=2925
 incandescent, alkali earth metals and Na ionization 0=10878
 incandescent, optical pyrometer meas. 0=12537
 incandescent surface, CO formation 2=8911
 internal friction, dislocation relax. 2=21412
 internal friction, high temp. damping 0=3145
 internal friction and Young's modulus, deuteron irradi. effects 2=12842
 ion bombardment at oblique incidence, etch effects 1=4672
 ion microscopes, field, use 1=18946
 ion range, heavy, anomalous penetrating tail, heavy ions 4=19119

Tungsten—contd

as ion source, oxygenated surface 3=14668
 irradiation damage and recovery 0=7906
 Kapitza resistance meas. 3=12017
 Langmuir probe, work function in Ar plasma 4=14685
 lattice defects, field ion microscopy 1=19788
 lattice focusing of collision sequences 3=22881
 lattice parameter determination 1=11554
 lattice parameter measurements, comparisons 1=15068
 lattice parameters, X-ray study, absorption correction 0=1919
 magnetoacoustic oscillations 2=14376
 magnetoresistance at 4.2°K in high fields 2=23249
 magnetoresistance, high-field, and Fermi surface 4=17476
 mass spectra anal. 0=9098
 mechanical props. and structure, anneal effect 3=11183
 melting point meas. by elec. heating 2=19779
 microcrystals, up to 60 Å diam., surface atomic structure. 3=3296
 Mössbauer effect by Fe⁵⁷ impurity, meas. 4=12579
 moving edge dislocations 3=10654
 neutron irradiation effects on physical properties 1=10021
 neutron irradiated, damage and recovery 0=20853
 nitrogen on crystal faces of, surface potl. 4=29199
 notch-impact behaviour of recrystallized, recovered and wrought rods 4=30789
 oxidation, 1500°-2600°K, mass-spectr. study 4=4695
 oxidation, pure and carbon-containing 1=5109
 particle range of inert gas atoms, "tail" 4=27579
 photoelectric emission, 10-50 eV 3=14631
 photoelectric emission yield for 1.54-13.3 X-rays 1=13109
 photoelectric yield for soft X-rays 2=208
 photoelectron emission of BaO-coated material 2=13586
 photoelectron yield from soft X-rays 1=2990
 photon emission, on He, Ne ion bombard., 25-100 eV 3=21900
 Planck's constant from X-ray short-wave limit 1=14623
 plastic deformation, at 1250°K 3=13368
 point, electron emission, laser beam induced 4=8811
 polarized thermal emission of light 2=122
 polycrystalline, interactions of adsorbed N and CO 4=23607
 pure, prep. by floating zone refining and melting by electron bombardment 4=23349
 radiation damage, deuteron bombard., energy depend. 1=3695
 radioactive, atmospheric, var. with time and place 4=2212
 reaction diffusion of Si 2=23205
 reaction kinetics of SrO on W 0=3308
 recrystallization, of doped wires 2=6834
 recrystallization kinetics 3=3333
 recrystallization, torsion induced 0=6328
 recrystallization, torsion induced 2=8785
 recrystallization, of wire 2=808
 reflection and dissociation of H₂ 2=20876
 reflection, light, far u.v. 4=22877
 reflection of noble-gas ions 1=10744
 resistance, electrical, and work function, effect of adsorption of electropositive atoms 3=13040
 resistance ratio, residual, diameter and current depend. 4=20337
 resistivity rel. to plastic deform. 3=13037
 resolidified drops, voids 1=20631
 resonance interaction with slow neutron at low temp. 3=4801
 secondary electron emission, inert gas ion bombardment, up to 50 keV 4=8824
 secondary emission 0=5341
 secondary emission, bomb. with positive ions 0=9078
 secondary emission, during incandescence, under K ion bombard. 0=15059
 secondary emission, Zn and Cd ion bombard. 0=12632
 self-desorption of residual gases, autoionic projector 2=8887
 shadowing of electron-microscope specimens 3=11329
 shock wave parameters rel. to initial densities 2=13360
 shock wave parameters rel. to initial densities 3=5487
 single crystal, field emission preceding vacuum arc 1=16362
 single crystals for emission and adsorption studies 2=21485

Tungsten—contd

sintered, U.T.S., temp. depend. 0=1866
 sintering kinetics, diffusion mechanism 4=7687
 slip investigation at room temp. for ~10% plastically deformed single crystals 4=30790
 sorption of noble gases from ion beams 1=20690
 spark, far u.v. continuous emission, spectrum, spatial distrib., apparatus 3=24249
 specific heat calc., from elastic consts. 2=8166
 specific heat, 1200°-2400°K 3=10596
 specific heat, 2400-2820°C 2=18528
 spectral power distrib. from colour temp. 3=7322
 specular reflection in electron diffraction 1=11978
 spike formation on surface by Ar ions 3=22880
 sputtering, collimation of particles in discharge 2=9647
 sputtering, effect of ambient gas at high temp. 3=14680
 sputtering patterns, from 30 keV Ar ions 4=12828
 sputtering, var. K ion energy, temp. 4=19127
 sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
 statistical model, electron structure 0=7830
 stress/strain relations, heat treatment temp. effects 3=23307
 structure of Ba and BaO layers on W 1=20701
 structure, grain boundaries, atomic configuration, field ion microscope obs. 4=23535
 subcrystals, in vapour-grown crystals 0=18301
 superconductivity 4=24515
 surface accommodation coeff., He, Ar, N, 2800°K 4=4660
 surface adsorption, desorption, ionization and diffusion of K, var. temp., K flux 4=23610
 surface adsorption, rel. to electron bombardment 3=18395
 surface, catalytic action in atomic beam recomb. 2=4522
 surface, coated with Cs, Sr, Ba, Th, work function var. 2=1474
 surface imperfections, after He atom bombard., at 20 keV 4=15511
 surface, incandescent, BaO beam interaction 3=23541
 surface, ion microscope study at 20°K 4=29178
 surface ionization, ionization potl. of Er, Tb, Ce, Th 1=18758
 surface ionization of K 3=9733
 surface ionization of K and CsCl 0=10873
 surface ionization, 1100°-1200°K 2=13546
 surface migration in high electric fields, activation energy 0=11646
 surface migration of N 0=7838
 surface, ordered, thermal rearrangement 3=18376
 surface potential changes, rel. to N₂ adsorption 4=11687
 surface structure of wires on d. c. passage 2=14930, 19040
 surface tension and surface migration consts. 0=7839
 tensile properties and twinning rel. to purity of single crystals 3=25617
 tensile strength, 0°-2300°C 1=20378
 thermal cond., high temp. depend. 2=20953
 thermal conductivity, phonon and electron components, separation methods 3=12930
 thermal conductivity, up to 1700°K 3=14395
 thermal and elec. conductivity and thermoelec. power 0=11588
 thermal expansion and lattice consts. up to 878°C 4=6753
 thermal expansion, low temps. 2=7439
 thermal expansion, meas., 500°-1500°C 2=19495
 thermal expansion, 1.5° to 12°K 4=9864
 thermal expansion, 24°-528°C 3=15441
 thermionic emission of Ba-activated cathodes, effect of carburization 2=15943
 thermionic emission cathode, use in microtron 4=8801
 thermionic emission, in Cs vapour, low coverage, discontinuity 3=14624-5
 thermionic emission, improved uniformity 4=3026
 thermionic emission of positive mol. ions 2=3086
 thermionic emission, in vacuo 0=10972
 thermionic emission variation rel. to time of heating by d. c. and a. c. current 4=8804
 thermionic and photoelec. Schottky deviations 3=21863
 thermocouples with Re for use in C atmospheres at >2000°C 1=4502
 thermocouples, Re-W, stability in H₂ atmospheres 0=14955
 thermocouples, W/Rh-W, up to 2800°C 0=7006
 thermodynamic enthalpy, 350-2000°C 3=8361
 thin ribbons, growth 4=7565
 thoriated, arc cathode 3=9755

Tungsten—contd

- thoriated, mechanical and thermionic props. 2=18992
 trace impurities in W, spectrochem. determination 2=23984
 twinning on fracture surfaces 3=18210
 u.v. radiation, on H ion impact 4=20487
 vacancies, formation and density 3=15482
 vacancies, rel. to quenching, 2350° to 1.5° K 4=22563
 vacuum annealed, causes of brittleness 0=16241
 vaporization, flash heating, near u.v. spectroscopy 3=24117
 vibration spectrum and heat capacity 1=19701
 volatilization, in H₂O vapour 4=27387
 welding 3=18685
 whiskers, formation and orientation 1=15003
 wire, "dope-tube" formation, mechanism 3=4880
 wire, electron metallography, using C replica technique 3=18421
 wire, field ionization at surface 3=12067
 wire, relaxation damping capacity, shear modulus 3=13329
 wires, hot resistivity 3=10723
 work function, adsorbed Ca effect 2=1477
 work function, adsorbed Sr effect 2=1478
 work function, changes caused by sublimating BaO 3=19294
 work function, effect of adsorbed Ba 3=14615
 work function, effect of absorbed N 3=12225-6
 work function, effect of adsorption of O₂ 4=3024
 work function, effect of chemisorption 1=7099
 work function, chemisorbed nitrogen effect 2=15942
 work function, impurity effect, theory 4=21555
 work function meas. using GM counter 3=2015
 work function of oxygen-coated W, rel. to adsorption of Ba 2=15104
 work function of polycryst. foil, meas. 3=9825
 work function of single crystal planes, 78°-293°K 3=12228
 work function, 311 plane, and temp var. 3=7626
 work-hardening and recovery from triaxial deformation 1=1334
 work hardening recovery by Young's modulus and internal friction meas. 3=11174
 X-ray diffraction techniques to 2200°C 1=10247
 X-ray emission linewidths, K and L α 3=3029
 X-ray interference, temp. depend., Debye analysis 4=12618
 X-ray L-emission spectrum 2=6588
 X-ray L-emission spectrum, "s" and "t" lines 2=14215
 X-ray L intensities 1=13951
 X-ray spectrum structure at short wavelength limit 1=6217
 Young's modulus data, rel. to temp., polycrystalline and single-crystal behaviour comparison 4=30788
 zone melting, analogue simulation 1=10240
 zone melting without a crucible 2=2364
 Au—Ba films on, work function, possible BaAu_x 1=15174
 Ba adsorption 1=15183
 Ba adsorption, activation energy 1=12667
 Ba, BaO and Cs adsorption, electrostatic interaction 1=12668
 Ba-coated, electron emission, in O₂ atmos. 2=9617
 BaO adsorption, activation energy 1=12667
 with BaO films, secondary electron emission of system 4=582
 CO dissociation from surfaces by electron bombardment 1=10667
 Cd on, adsorption, migration, evaporation 1=20693
 Cs adsorption, activation energy 1=12667
 H⁺ formation on, during incandescence 0=8985
 H₂ diffusion in, degassing, above 1000° C 4=22620
 O and Ba coated, work function 0=9064
 Rn²²² ions range, 2-450 keV 3=14676
 Sr adsorbed layer migration 4=23611
 Th atom surface adsorption 2=10948
 W⁵⁺, e.p.r. in glasses, silicate and phosphate 3=20656
 W^{182, 183}, Mössbauer effect 3=6462
 W¹⁸⁷ ions, range in W, 1.6-127 keV 3=14678
 W—Cs system, for thermoelec. energy conversion 2=7555
 W—Re interdiffusion, rel. to intermetallic cpds. 2=8245
 Zr films on, emission props., and microstruct. 2=2428

Tungsten compounds

- alloys, ductility, at low temp. 4=23220
 alloys, superconductivity 3=16873
 borides and carbides, thermoelec. power with Cu 1=12465
 metal tungsten bronzes, model for electronic structure 3=15461

Tungsten compounds—contd

- nitride, hexagonal, crystal structure 4=23494
 oxides, mag. susceptibilities, non-stoichiometry 2=2266
 tungstate luminors, triboluminesc. 2=16879
 tungstates, Eu³⁺ fluorescence 2=4173
 tungstates, luminescence 4=1762
 tungstates, u.v. luminesc., rel. to electron traps 2=21268
 M₂WO₆ (bronzes), nuclear mag. reson. 2=4287
 Th—W, saturated emission at high currents, meas. 3=19307
 W borides, carbides and nitrides, elec. props. 1=3707
 W carbide, Co-bonded, wear of hard and soft phases 0=18285
 W carbide—Co, Lorenz number, thermal and elec. cond. 1=925
 W carbide grains, Co coated, mag. study to determine size 1=6555
 W carbide, "hot" electron emission 0=9066
 W carbide, pickup of copper and duralumin 0=6322
 W carbides, anisotropic thermal vibrations 0=13488
 W halides, complex, far-i. r. absorption spectra 4=3877
 W hexacarbonyl vapour electron bombardment, electrical props. of film formed 4=26016
 W hexahalide complexes, electron transfer spectra 0=20650
 W nitride, cubic form, electron diffraction study 0=14023
 W nitride II, rhombohedral, chemical crystallog. 3=20842
 W nitrides, crystal structure 3=13462
 W nitrides, electron diffraction phase anal. 0=14022
 W oxide, thin film layers 2=21565
 W oxide, whiskers, obs. 3=3374
 W oxides, crystal growth 3=18271
 W oxides, mass spectra 0=10699
 W oxides, thermodynamic props. 0=1955
 WB, crystal structure, rel. to similar types 3=18338
 W_xB_{1-x} (B=Re, Ru, Os, Rh, Ir, Pd, Pt), supercond. and para-mag. suscept. 2=2961
 W—Ba and W—BaO systems, work function and photoelec. emission 1=13106
 W—Be system, crystal structure 4=17811
 WBe₂₂, crystal structure 3=20839
 WBr₆ and WCl₆, mean vibr. amplitudes 4=17292
 WC, Co-bonded, adiabatic elastic moduli 1=1252
 WC, crystal structure 1=20451
 WC films, crystal structure 1=11566
 WC, high-temp. heat content 4=12650
 WC, lattice defects, hardness, X-ray diffract. line widths, rel. to high press. and temp. 4=22592
 WC, plastic deformation, evidence 4=4491
 WC, struct. by neutron diff. 2=10866
 WC, superconductivity 2=7521
 W—C system, phase transitions at 1300° and 1760°C 4=26570
 WC, wear of sintered material 3=3247
 WC, desorption of Rb, Mg, Ag ions by elect. fields 1=5105
 W₂C, deposition and field emission of Ba layers 1=20692
 W₂C films, crystal structure 1=11566
 W₂C, structure, electron diffr. study 1=15083
 W₂C, superconductivity 2=7521
 WC—Co alloys, Co cementing phase, packing, deformation errors 3=16117
 WC—Co, macroscopic structure, rel. to electrical resistivity 3=13497-8
 WC—Co, sintered, fracture mechanism 3=11178
 WC, Co-bonded, elastic modulus, formulae 4=28986
 WC, Co-bonded, ultimate compressive strength and fracture mechanism 4=23221
 WCl₆, liquid and supercooled solns., e.s.r. study 3=21407
 W (CO)₆, i.r. spectrum 2=16530
 WC—Co alloys, compressive strength, effect of composition and structure 4=15720
 WC—Co alloys, ultimate tensile strength 4=26532
 WC-Co(10%), anisotropy, from X-rays 3=6775
 W—Co alloys, brittle fracture and microhardness rel. to composition 2=23780
 WF₆, mag. suscept. 2=16889
 W—Fe, determination of W 3=11278
 W—Mo, component diffusion, 1500°-2600° C 4=22621
 W—Mo, diffusion of Mo and W in elec. fields 1=4992
 W—Mo, diffusion of Mo and W in elec. fields 1=11222
 W(15 at.%)—Mo, diffusion of W and Mo, electric field, effects 3=20237
 W—44 at. % Mo, ordering 3=20891

Tungsten compounds—contd

- W—Mo, 25, 50, 75 at. %, surface, ion microscope study at 20°K, vacancies 4=29178
 W—N system, superlattice and disordered phases 3=23451
 W₂N, hexagonal II, crystal structure 1=15086
 W₃N₆ films, rhombohedral, structure 3=13460
 WO bronzes, crystal structure, sintering temp., and dielec. props. 3=25390
 WO₂, molecular vibr., mean ampl. 4=25665
 WO₃, Ag-doped, solid-state studies 0=17922
 WO₃, amorphous, Na²⁴, Ar⁴¹, Kr⁸⁵, Xe¹²⁵ range meas., comp. to theory 4=27580
 WO₃, colloidal crystals, structure 3=18408
 WO₃ crystals, green stripes from heat treatment 2=21050
 WO₃ crystals, growth and evaporation (700°–1800°C) 1=9111
 WO₃, desorption of Rb, Mg, Ag ions by elec. fields 1=5105
 WO₃, elec. props. rel. to W bronzes 3=13083
 WO₃, i.r. absorption, effect of illumination with u.v. 0=18118
 WO₃, monoclinic, crystal structure at room temp. 1=9136
 WO₃, optical absorption edge, temp. dependence 1=12486
 WO₃, patterns produced by heat treatment 1=15080
 WO₃, phase transitions below room temp. 1=9100
 WO₃, triclinic, domain structure, effects of stress 1=977
 WO₃, weak temp.-indep. paramag. 2=6655
 W—Os, supercond. regions 2=7522
 W—Pt, superconductivity 3=3962
 W—Re, field ion microscope study 3=18340
 W—Re, grain boundaries, atomic configuration, field ion microscope obs. 4=23535
 W—20% Re, grain boundaries, rel. to α -irrad. 3=17775
 W—Re, thermocouples, thermoelectric stability at high temp. 4=24417
 W—Ru alloy, constitution diagram 4=15746
 WSe₂, optical properties of single crystals 3=25466
 WS₂, oxidation, 650–1500°C, weight var. 4=13715
 W_xTa_{1-x}Se₂, X-ray and thermoelec. study 3=23029

 ions, U^{5+} , elastic scatt. of slow positrons, calc. 2=20754
 irradiated, α - γ -phases, low, high temps., swelling 2=21085
 irradiated and annealed, density changes 2=20724
 irradiated, effect of heat and pressure on swelling 0=8265
 irradiated, growth of gas bubbles, effect of dislocations 0=9903
 irradiated, growth, wrinkling, creep, fuel element life 0=7674
 irradiated Kr^{85} release on phase changes 2=4457
 irradiated, melting, release of inert gases 2=6061
 irradiated, tensile props. 0=10271
 irradiation creep, mechanism 3=2795
 irradiation effects on composition, under long use in reactor 0=15623
 irradiation growth after mechanical working 3=8480
 irradiation growth rate eval. 3=6310
 irradiation growth rates 4=22654
 irradiation growth, twinning mechanism in-correctness 4=7464
 isotope separation, cascade process 1=3525
 isotope separation, nozzle, by adding He 3=15309
 isotope separation by UF_6 gaseous diffusion, use of fine-pored Ag membranes 0=18385
 isotope separator, magneto-ionic expander 0=12652
 isotopic anal., spectral methods 1=3526
 isotopic analysis 3=18999
 L X-ray fluorescence yield meas. 4=15307
 lasers, $U:CaF_2$ longitudinal modes 2=19700
 lattice dynamics and elastic constants of α -phase 1=11145
 lattice strains due to β -quenching 2=19097
 liquid, density and thermal expansion of isotopes 2=2700
 mechanical props., effect of radiation 0=4545
 mechanical props, tensile, effect of grain shape 4=7463
 mechanical strength, fracture elongation, var. with grain size 4=4492
 metal containing Kr gas bubbles, X-ray study 4=2115
 metallurgy, production 0=3392
 meteor content, neutron activation via Xe 0=4883
 microstructure rel. to thermal cycling 2=21545
 μ -mesic atoms, X-ray emission and radiationless transitions 1=4919
 monoclinic α -U, plastic deformation 1=20355
 natural, fuel rod heat treatment, effect on burn-up distortion 0=14044
 neutron absorpt., effective reson. integral 3=2544
 neutron backscattering from reflectors, Monte Carlo calc. 4=21860
 neutron diffraction, nuclear coherent scatt. 2=10832
 neutron resonance absorpt., temp. depend. 1=16810
 nuclear reactor swelling, rel. to burn-up and temp. 4=6440
 occurrence in free form in UO_2 2=14926
 ore deposit, size determination by Kr^{85} method 0=4777
 in ores, determination by γ -ray spectrometry 1=7926
 ores, prospecting, using atmospheric Rn activity 0=16498
 oxidation, in air at increasing temps. 3=3250-1
 phase transformation, α - β 3=25652

Uranium—contd

- phase transformation, $\alpha \rightleftharpoons \beta$, nucleation and growth 2=6823
 phase transformations, $\alpha \rightarrow \beta$, $\beta \rightarrow \gamma$, sintered and massive samples 4=1772
 phase transformations, up to 45 kbar pressures 3=8795
 phase transition, $\alpha = \beta$, mechanisms, review 3=5129
 phase transition at 42°K in α -type 1=15135
 photoelectric emission 2=7646
 photoelectric emission 3=5694
 photoelectric props., changes at phase transformations 2=3072
 photoelectrons from inner shells, ang. distrib. 1=19600
 plastic deformation of α -U 1=20354
 plastic deformation and fracture of single crystals at -196°C 2=23756
 plastic deformation, -196°C, rel. to pre-work hardening at 20°C 4=13449
 plastic deformation, single crystals, -196°C, tension 3=15989
 point defects and fission spikes from weak irradiation 4=1534
 polycrystals, effect of thermal cycling on micro-structure 0=16254
 powder, ignition study 3=6916
 preferred orientation, effect of $\alpha \rightarrow \beta \rightarrow \alpha$ phase transformation 2=4452
 prospecting by Rn dosage in atmospheric air 1=15242
 proton bombard., 143 MeV, neutrons emitted at 0° 2=7987
 radiation effects 4=30596
 radioactive current from UO_2 1=19378
 radiography, neutron 4=10993
 radiometric determination in complex ores 0=18455
 reactivity, temp. coeff., meas. 0=13330
 recrystallization of Belgian uranium 2=12932
 recrystallization after cold-rolling and annealing 4=10410
 recrystallization during hot or cold forging 2=4471
 recrystallization, secondary and after critical strain 4=2116
 reserves in U.S., reactor operating costs 2=3643
 resistance, electrical, anisotropy, α -form 3=22899
 resistivity of interstitial atoms and vacancies in α -U 3=25326
 resonance integral (for neutrons) 2=12203
 in rocks, quantitative det. 2=17113
 rod, transient temperatures 1=772
 self-diffusion, addition Mo, Zr or Nb effect 2=18613
 self-diffusion, in α -U 2=606, 6376, 18612
 self-diffusion, β -phase 0=11644
 self-diffusion, in β -U 2=3948
 sintering, β , α phases, contraction at var. temp., activation energies 4=13664
 specific heat, U^{235} , hyperfine < 0.75°K 4=9850
 spectrum, isotope shifts 4=12379
 spectrum, isotopic displacements 0=5890
 strain relaxation by neutron irradiation 2=23769
 strength rel. to crystal structure change 4=28960
 stress/strain at 1.4-77°K 1=12594
 structure rel. to anisotropic thermal expansion 3=10606
 structure of metal 1=6485
 subgrain boundaries, due to phase transformation 1=1414
 superconductivity, mechanism, rel. to low-lying virtual f-shell 4=5516
 superconductivity, simple model 4=14523
 surfaces, total emissivity 3=14413
 swelling, effect of thermal cycling 2=23884
 swelling, irradiation, under mech. restraint 3=12712
 swelling on postirradiation annealing 4=12835
 thermal diffusivity meas. 1=17430
 thermal and electrical conductivity 4=28388
 thermal expansion of α -U single crystals 2=2057
 thermal expansion, anomalous below ~ 43°K, and conductivity, electrical 3=20270
 in thermal reactor, Doppler effect 2=3676
 thermionic props. of wires and films 0=3786
 thermoelectric power determination 0=18082
 thermoelectric power, 20°K-room temp. 2=12552
 thermoelectricity, temp. var. down to liquid He temps. 4=6918
 thermoelectric power rel. to temp. 4=17542
 thin films prepn. for neutron cross-section meas. 3=11321
 transformation temperatures 0=18377
 vacuum deposition, on organic backing 0=17288

Uranium—contd

- vapour pressure, effect of oxygen 3=3930
 vapour, ionization by electron impact 4=16437
 vapour pressure 0=10699
 wave number meas. from Fabry-Perot interferograms 0=10768
 work function of films and foil 2=17858
 X-ray L-emission spectrum 2=6588
 X-ray L intensities 1=13951
 X-ray spectra, h.f.s. 1=14615
 in NaF beads, det. from photoluminesc. 2=17107
 U, anisotropic irradiation growth prediction 3=4898
 α -U, atomic positions, 22°-600°C 3=25705
 α -U, crystal structure 3=8837
 α -U, dislocation loops, orientation 3=20181
 α -U, effect of Fe and Al on tensile props., -183° to 350°C 4=28987
 α -U, Frank dislocation formation 3=2794
 U-graphite reactor fuels, fission products loss 3=12737
 α -U, plastic deformation rel. to grain size 4=7462
 α -U, plastic deformation by rolling, 550°-640°C 3=13370
 α -U, single crystal extended to fracture struct. 4=23222
 β -U, tensile props., rel. to strain rate and temp. 4=20689
 α -U, thermal cycling during creep, incremental collapse 3=8908
 U^{4+} in $\text{Ca}[\text{Ba}, \text{Sr}]\text{F}_2$, e.s.r. and charge compensation 4=26439

seals, O-rings with blank-off threaded plugs for unused feedthrough holes 3=9520

shutters, magnetically operated 2=69

sliding bar vacuum lock for mass spectrometer ion source 4=16562

sluice, for mass-spectrometer 2=22282

sluice valve of large aperture 1=5310

stopcock, metal 2=2800

students' kits 0=19241

sublimation apparatus, prep. of α -active thin sources 0=7489

Teflon coatings, to reduce gas-wall interaction 4=18301

Vacuum apparatus—contd

- television tubes, residual gas investigation 1=18492
- thermal cond. meas. of powders 4=2865
- thermal gas flows, production 4=5260
- thermocouple, Mo and Kovar fused to glass 3=24092
- trap, glass, const. level liquid N₂ 4=18303
- traps, copper, for ultra high vacua 3=5475
- tube materials, monitoring of props. 3=9522
- turret for vapour deposition, multiple heater 2=21961
- u. v. irradiation chamber, for space vehical thermal control coatings 4=18307
- ultra-high (1.5 × 10⁻⁹ torr) system, for large volume 2=1213
- ultra-high systems, with oil diffusion pumps 1=2793
- ultra-high vacuum production, Alpert's method, for surface phenom. studies 0=14699
- ultrahigh vacuum, review. 3=180
- ultrahigh vacuum in small glass systems 3=3840
- ultra-high vacuum unit 0=6841
- vacuum evaporator for ultra-high vacuum range 3=23954
- valve, all-metal, bakeable, design 4=5262
- valve, all-metal, for ultra-high vacuum 1=10558
- valve, bakeable, high-conductance, using 6 in. steel ball 3=1739
- valve, electrodynamic, for fast "pulses" of gas 2=7268
- valve, fast acting, for gas injection 0=3577
- valve, glass, for high vacuum 2=2801
- valve, glass, using liq. gallium seal 2=19638
- valve, greaseless, non-absorbing 1=6915
- valve, heated Pt wire for variable leak 2=5084
- valve, large, ultra-high vacuum 3=7255
- valve, metal, for high vacuum 2=15663
- valve, packless, all-metal, for 743° - 77°K 3=7257
- valve, wide aperture for shock tube evacuation 4=27235
- valve, with rolling C- ring seal, greaseless 4=8279
- valves, all-metal, modification 4=2744
- valves, u.h.v., bakeable 3=3843
- valves, for ultra-high vacuum 0=3575-6
- vapour pressure measurement, effusion method, metal cell 2=43
- window seal, bakeable 1=5311
- window seal, for gas laser 3=22026
- X-ray camera, high temp., for reactive metal exam. 0=13972
- Young's modulus meas., using transverse vibrations, -200° to +700°C 0=8099
- zeolite oil vapour trap introduction 3=14226
- Zeta, 1958 modifications 0=5838
- Al creep meas., high temp., induction heat source 4=26496
- Al wire seals for bakeable vacuum systems 1=183

Vacuum gauges

- Alpert-type, construction and characteristics 1=5307
- Alphatron, using radioactive materials 3=5469
- using alternating gas discharges, for rockets 2=2796
- based on meas. of radiometer forces 4=5260
- Bayard-Alpert with additional differential collector 3=21458
- Bayard-Alpert, anomalous residual currents 4=2740
- Bayard-Alpert, bistable operation 2=9325
- Bayard-Alpert, CO₂ dissociation 2=19631
- Bayard-Alpert, change of X-ray limit 3=5470
- Bayard-Alpert, clean-up of argon 1=9433
- Bayard-Alpert, contaminants, by omegatron mass spectrometry 3=21460
- Bayard-Alpert, filament impurities rel. to operation 4=18283
- Bayard-Alpert, increased pumping action, rel. to adsorption 3=16669
- Bayard-Alpert, ion sorption characteristics 2=2792
- Bayard-Alpert ionization, ion pumping of noble gases 1=10552
- Bayard-Alpert ionization type, erroneous readings, causes 1=11796-7
- Bayard-Alpert and magnetron, pres. meas. < 10⁻¹⁰ torr 3=23951
- Bayard-Alpert, operation 2=13387
- Bayard-Alpert, pumping and desorption dynamics, 10⁻⁸ to 10⁻⁷ torr 4=18288
- Bayard-Alpert, pumping speed for N₂ 2=5080
- Bayard-Alpert, reverse X-rays 4=18285
- Bayard-Alpert, sensitivity optimization and ion current linearity 4=21195

Vacuum gauges—contd

- Bayard-Alpert, sorption, ion, Ar, N 3=23946
- Bayard-Alpert, for 10⁻³-1 torr 2=17520
- Bayard-Alpert, total pressure meas., < 10⁻⁸ torr 3=5474
- Bayard-Alpert type, meas. device 1=18484
- bibliography 2=2791
- calibration systems 0=19232
- calibration, 10⁻² to 10¹ mm Hg, by air injection 1=8169
- calibration, 10⁻³ to 10⁻¹⁰ torr 4=18279
- calibration uncertainty and traceability problem 4=18278
- capacity-type micromanometer 0=6843
- for cathode-ray tubes, gas press. meas. 2=2799
- cold cathode, for below 10⁻³ mm 0=12438
- cold cathode discharge gauge 4=18286
- combined thermoelec. and ionization gauge, 1-10⁻⁶ mm Hg 0=5060
- common types, lower pressure limits, review 2=2798
- conference, Boston (Oct. 1963) 4=16153
- diaphragm displacement, strain gauge obs. 4=29508
- electric discharge—mag. field type, review 1=5305
- electron-beam ionization, obs. by effect on space charge 4=18282
- using fast charged particles, review 1=2724
- fast ion gauge for neutral ion density nr. confined plasma 3=24297
- fibre, quartz damping calc. 4=14229
- field-emission microscope, gas-contaminated, single ion detection 4=2738
- gas viscosity meas. 4=14194
- heat cond., with saturation diodes 4=24279
- hot-cathode ionization gauge, life of oxide-coated filaments 2=19632
- hot-cathode magnetron ionization gauge for ultra high vacua 1=4386
- hot-cathode magnetron ionization, improved 3=14227
- in image orthicon tube, secondary electron multiplier as ionization gauge 4=18293
- ionization, B-A, elec. clean-up 3=16670
- ionization, Barkhausen oscillations, avoidance 1=1799
- ionization, Bayard-Alpert, bistable behaviour 0=5061
- ionization, Bayard-Alpert, cause of large-magnitude errors 0=19226
- ionization, Bayard-Alpert, gas desorption and pumping effects at 10⁻⁶ mm Hg 4=5257
- ionization, Bayard-Alpert, nonproportionality 0=2188, 19225
- ionization, Bayard-Alpert, outgassing difficulty, use of PCT gauge 1=18483
- ionization, Bayard-Alpert, ultra-high vacuum use 3=11843
- ionization (Bayard-Alpert) with photocurrent suppression 3=18865
- ionization, calibration for water vapour 2=2795
- ionization, cold cathode, three-electrode form 0=19230
- ionization, control circuit 0=2190
- ionization, with electron multiplier output 4=8270
- ionization, electron-surface interaction effects 4=18284
- ionization, emission stabilizer 2=21956
- ionization gauge for atmospheric meas. 4=30927
- ionization gauge, cold cathode, characteristics 4=14228
- ionization gauge, emission current regulation 4=2739
- ionization-gauge filaments, protection 3=5472
- ionization gauge head, Bayard-Alpert type 1=4387
- ionization gauge, new type 1=2796
- ionization gauge, with photomultiplier electron source 1=15977
- ionization gauge, power supply for pulsed magnetic field use 1=15980
- ionization gauge sensitivities, mass spectrometric determ. 3=23950
- ionization gauge, supply circuit 1=16216
- ionization, hot-cathode, linearity theory 4=249
- ionization, hot-cathode, resistive-film elimination 3=23949
- ionization, hot-cathode, sorption and desorption of gas 0=16746
- ionization, improving sensitivity 4=16159
- ionization, ion energies in cold cathode, discharge 0=5275
- ionization, manometer, for halogen-bearing gases, calibration 2=2793
- ionization, meas., effects of adsorbed oxygen 3=21462
- ionization, "nude" gauge for density meas. in vapour stream 1=5104

Vacuum gauges—contd

ionization, Philips type, discharge mechanism 0=19614
 ionization, prod. and power supply 2=13388
 ionization, pumping mechanism of nitrogen 2=21957
 ionization, radioactive 4=16158
 ionization, range extension, by low intercept collector 4=16160
 ionization, recording, low-cost 2=21955
 ionization, re-emission of ionically pumped Ar 3=9518
 ionization, self-chopping 2=15661
 ionization, sensitivities 0=8722
 ionization, simple circuit, for 10^{-4} - 10^{-7} mm Hg 2=11434
 ionization, up to 10^{-1} torr 0=19228
 ionization, tetrode type 1=18487
 ionization, as thermal conductivity gauge 4=251
 ionization, for transient pressures 10^{-4} to 10^{-7} mm Hg 1=10554
 ionization type, review 1=5305
 ionization, for ultrahigh vac. mass spectr. 2=20054
 ionization, ultrahigh vacuum 4=250
 ionization, for very low pressures 1=11798
 ionization, wide-range, with Ni electrodes 2=7266
 Knudsen, cylindrical, construction and calibration 2=2797
 Knudsen, radiation pressure errors 4=24278
 low temp. (liquid He), Pirani 4=24277
 McLeod, diffusion effects with cold traps 4=8275
 McLeod, for gas-vapour mixtures 2=15659
 McLeod, for gases with high critical temp. 0=19227
 McLeod gauge, precision type 1=15978
 McLeod, improvement in operation 1=18486
 McLeod manometer with prescribed volumes as standard instrument 1=4389
 McLeod, mechanical, 5 to 500 μ 4=21194
 McLeod, source of error in cold trap system 2=11433
 McLeod, systematic errors, and use as standard 4=18277
 magnetic ionization gauge 1=12932
 magnetron and ionization gauges, mutual interactions 4=8272
 magnetron, instability 4=8271
 magnetron type 0=980
 magnetron type evaporation-ionization 4=8268
 magnetron, with elimination of oscillations 4=8269
 mass spectrometer, for partial press. 4=29681
 micromanometer, electrical, range 10^{-4} to 1.0 in water 1=10553
 molecular manometer, heat transfer 1=15979
 molecular streaming, discrepancies due to 0=2186
 molecular vacuum pressure meter 1=18482
 oil-filled manometer 3=9519
 oil manometer, self degassing 2=5083
 oil, sloping limb, out gassed by mag. stirring, down to 5×10^{-2} torr 3=21459
 omegatron, as mass spectrometer 3=5474
 omegatron, for partial press. meas. 4=2741
 omegatron, for partial press. meas. $<1 \mu$ torr 2=13386
 orbitron ionization gauge 4=18289
 P I G reflex pulse discharge, measurement of temp. 3=24229
 partial pressure, elec. mass filter appl. 1=18485
 for partial press. meas., mass spectrometers 4=5261
 partial-pressure gauge, fast electrometer-amplifier 4=18292
 Penning, rise time <1 msec 4=18290
 Philips, enhanced linearity, ruggedness 2=5081
 Physical Society exhibition review 4=23981
 piezoelectric oscillator manometer 1=8817
 Pirani, calibration for pressure measurement 1=4388
 Pirani, differential, for dynamic pressure meas. 3=1736
 Pirani gauge, using Pd barrier, for high press. leak detection 0=5062
 Pirani, thermistor-type 0=19231
 power supply 2=2794
 press. meas. in presence of condensable vapours, use of "air-bleed" 1=5308
 pressure scale, inverted logarithmic 1=5299
 pressure standard, proposed unit 0=19222
 pressure transducer, 10^{-5} -200 mm Hg range 2=19506
 pulse compression, thermal 2=19635
 radiometer, Klumb-Schwarz type, theory 4=252
 readings, interpretation 3=16671
 Redhead magnetron and Bayard-Alpert on Explorer XVII for upper atmosphere meas. 4=20859

Vacuum gauges—contd

Redhead magnetron, inverted magnetron, suppressor grid ion, characteristics, 10^{-7} to 10^{-14} torr 4=18280
 Redhead, relative sensitivities, pumping speed 2=21954
 residual mixture, electron-adsorption method 2=1215
 "Reva" friction pump 2=5082
 review 1=5306
 review 2=7263
 review of recent progress, ultra high 4=8257
 review, ultra high 4=8274
 semiconductor manometer, $1-10^{-6}$ mm Hg 0=2189
 semiconductor, thermistor 4=11266
 for space simulation chambers 4=18294
 spinning rotor, for $<10^{-4}$ torr 2=7265
 spiral Bourdon gauges from Pyrex 1=9362
 standard unit of pressure ("vac"), criticism and defence 1=9425
 standards and calibration technique 4=18277
 "tensimeter", new gauge for 1 mm Hg to 1 atm 1=10555
 thermal conductivity type 0=19229
 thermal, in pulse pressure operation 1=15976
 thermistor current, indirectly heated 4=27234
 thermistor hypsometer, with high accuracy 0=914
 thermistor, influence of wall temp. 0=6842
 thermistor pressure gauge design 1=10471
 thermocouple, circuit diagram 3=5473
 thermocouple, const. temp., high-sensitivity probe 4=18287
 thermoelectric, extension to 5×10^{-6} mm Hg 2=19633
 tritium adaptation to measuring equipment 4=5259
 using tritium source, 10^{-4} to 200 torr 4=18291
 types and calibration methods, review 2=17519
 ultra-high vacuum, nonbaked, outgassing and directional press. 2=9324
 for ultrahigh vacuum, review 1=5304
 units 4=18254
 VG-1A ionization gauge, sensitivity calc. 1=6914
 vibrating vane, absolute gauge, to 10^{-9} mm Hg 2=19634
 viscosity indicating, theory 2=19636
 Wrede gauge of improved design 1=9427
 Hg manometer, joints, cylinder and ball and socket 3=18869
 Hg, shortened 3=1737
 O₂, partial pressure meas. 1=9361

Vacuum pumps

adsorption, charcoal, for metal structure studies 2=2784
 adsorption, using cold charcoal 0=8721
 adsorption, for H evac. 2=5079
 adsorption, large capacity 0=16741
 adsorption type, high capacity 1=4384
 backstreaming in baffled systems 4=18260
 back streaming and diffusion effects 4=29680
 Bayard-Alpert ionization gauge, pumping dynamics 10^{-8} to 10^{-7} torr 4=18288
 Bayard-Alpert ionization type, pumping of A, N₂ and H₂ 1=15971
 bibliography 2=2791
 charcoal, active as sorbent for 10^{-3} mm Hg 3=18866
 chemical and ionic, general principles 1=15970
 circulation pump 4=27232
 clean metal surface pump 3=23948
 comparison 4=8264
 condensation, gaseous, by refrigeration 4=5255
 condensation, H, large, for u.h.v. 3=182
 condensation, limiting vacuums 4=14226
 condensation, residual gas comp. in evac. system 0=12441
 conference, Boston (Oct. 1963) 4=16153
 continuously pumped linear accelerator 1=4676
 control system, semi-automatic 1=6913
 cryogenic pumps, physical principles 3=11841
 cryopump configurations, free-molecular flow regions 4=11264
 cryopumps, speed meas. 4=18272
 diffusion, development 4=18259
 diffusion, glass-Hg, pumping speed, rel. to condensing wall temp. 2=19627
 diffusion, Hg and oil, max. attainable vacuum, comparison 0=2188
 diffusion, Mg, with liquid N₂ traps 4=18264
 diffusion, metal-oil, with discharge tubes sensitive to hydrocarbons 2=2788
 diffusion, for nuclear reactors, fusion 4=8264

Vacuum pumps—contd

diffusion, new nozzle arrangement 4=245
diffusion pump baffle, circular chevron 3=18863
diffusion pumps, developments and applic., review 1=8168
diffusion pumps for 4×10^{-10} torr 1=2794
diffusion pumps in series, with glass traps, for $(4 \text{ to } 5) \times 10^{-10}$ mm Hg 4=248
diffusion, speed meas., dome fitting 0=978
diffusion, use of di-butyl-phthalate fluid 4=8260
diffusion, use at ultrahigh vacua 2=13384
diode getter ion pump, pumping action, study by tracer technique 4=14227
diode type getter ion pump for inert gases 3=14224
for electricity, direct converter, Cs, continuous 4=24543
evapor-ion pump development 1=4385
evaporation, with liquid He trap 0=3571
flow, gaseous, thermomolecular, and pump throttling 4=8265
fore-pump, speed meas. 2=7262
free-molecular flow through clearance with one moving wall 3=1716
freezing, gas, high speed 4=11261
gas discharge, high speed pumping 0=3570
gas discharge, pumping effect 0=8720
gas pressure maintenance device 1=15975
gas trapping during ion pumping 4=8262
getter-ion 2=15657
getter-ion, grids, plasma containment 4=18967
getter ion, mechanism and development 3=18864
getter-ion, operation and applic. 0=107
getter-ion, protection circuit 2=13382
getter ion-pump for electron tubes 1=11795
getter-ion pumps, integration of current 1=5302
getter-ion, theory and design 0=5058
getter-ion, Ti droplet, pumping characteristics 0=16742
getter-ion, with Ti evaporation by heat 2=15656
getter-ion, Ti sublimation and ion pumping 4=18270
getter-ion, Ti or Zr, review. 3=181
getter-ion, for ultrahigh vac. mass. spectr. 2=20054
getter pump, flash-type, for evacuation of large volumes 4=21189
glass oil-vapour pump design 0=976
heated-H condensation, 4×10^{-10} mm pressure 4=27233
hydrogen condensation, $\sim 10^{-9}$ mm Hg 2=2787
ion diode, wall potential 2=2786
ion drag, using razor-edge emitters 2=2785
ion getter, circuit diagram 3=5471
ion-getter pumps, high-speed, demountable 1=1773
ion, high-speed, discharge axial field 0=3570
ion pump configurations, rel. to Penning discharge 4=18265
ion pump, high pumping speed, modified Bayard-Alpert 1=2795
ion pump used as leak detector 1=4391
ion pump, for Ti evap. 2=7264
ion pump, ultimate press. 4=18269
ion pumps, gas discharge pumping action in mag. fields 4=16155
ion pumps, titanium type 1=18481
ionic pumping, influence of initial conditions 1=15972
ionization, glass wall potential 1=15973
ionization, re-emission of Ar 3=9518
ionization, for ultrahigh vac. in small glass systems 3=3840
isotope separation, in molecular pumps 0=4161
kinetic pumping systems, surface contamination 4=21566
large ion, magnetic field design 4=18267
low temp., in near free-molecule flow region 4=12262
low temp., speed of a shielded surface, calc. 4=11260
magnetron type evaporation-ionization 4=8268
manifold outgassing rate, inclusion in pumping equation 4=18257
mass spectrometer investigation 4=8273
mechanical booster, backflow study 4=247
mechanical, Gaedes' influence 4=8267
mechanical, pumping rate calc. 2=19630
mercury diffusion, RVA-1-2 type 2=21953
miniature pump, with Ti getter 0=14700
molecular 0=2187
molecular, light and heavy gas selective pumping 2=19629
molecular sieve 2=15658
narrow slot differential pumping 4=18258
oil diffusion, backstreaming rate, nozzle design effect 4=18261

Vacuum pumps—contd

oil diffusion, decomposition products, effect of operating conditions 2=9323
oil-diffusion, for particle accelerators 1=9426
oil diffusion, residual gases 4=18262
oil diffusion, for ultra-high vacuum systems 1=2793
oil-vapour, NVO-40 4=16154
oil vapour, for 2×10^{-3} mm Hg, in vessels sprayed with Ti 2=19628
oil vapour, vel. distrib., from Laval nozzle 2=1214
outgassing rate, rel. to exposure and pumping time 4=18275
outgassing rates, rapid determination 0=2192
Penning, gas sorption characteristics 1=18480
Penning, molecular-sieve backed system 2=11432
phenoxy benzene pumping fluids 0=16740
plasma, from jet accel. by gradients of h.f. and static mag. fields 4=5605
poisoning prevention with alumina traps 0=16745
polyphenyl ether pumping fluids 0=16740
pumping at solid surfaces 3=21454
pumping speed, measurement 0=10702
pumping speed under quasi-stationary conditions 1=5303
pumping speed under quasi-stationary conditions 1=11794
Redhead gauge as pump, speed 2=21954
review 2=1212, 7263
review of recent progress, ultrahigh, getter ion, oil diffusion, cryogenic 4=8258
review of ultra high vacuum pumping systems 1=5301
Roots pump, speed 1=18482
Roots, theory and appl. 2=13383
rotary, for corrosive products 2=13385
rotary, design 0=3569
sorption, multisurface, molecular sieve 3=16668
speed meas., by metering dome, error correction 4=8263
speed meas., errors due to test domes and gas beaming 4=18273
speed, Ti, high temp. electrode effects 3=23947
sputter-ion, gas evolution during baking 4=18274
sputter-ion pumps, gas evolution during baking 4=21193
sputter-ion, reviews 4=8261
sputter-ion, with I/P characteristics down to 10^{-11} torr 4=18266
sputter-ion with thermionic electron injection 4=21192
sputtering-ion pumps, Ti sheets for cathodes 4=21191
steam ejector pump, 0.5 kg/hr capacity 4=246
"thermal gradient", experimental model 4=11263
titanium pump, high speed 1=12931
Toepler, liq. Sn, for transfer of high purity He 3=7254
u.h. pumping group, unitarily designed 4=18263
ultrahigh vacuum, effect of fore-vac. conditions 3=11842
ultra-high vacuum, review 4=27231
ultrahigh vacuum in small glass systems 3=3840
vapour pressure measurement, in 2 methods 2=2790
vapour pumps, process affecting efficiency 3=1735
vapour pumps, theoretical development 1=15969
vapour, review 4=8266
very high speed, ultra-high vacuum 2=5078
zeolite backing pump, for Al vessel outgassing characteristics 4=18296
50,000 l/sec, cold cathode ion pumping with active film gettering 4=18268
H condensation method 1=8838
He condensation, for mag. trap evacuation 3=21456
He and He-Ar mixtures, cryogenic tests, 2.5° to 4.2°K, below 10^{-6} mm Hg 4=2736
Pd or PdAg diaphragm, heated, for H 3=14225
Ti, construction. 3=183
Ti getter, optimum Ti evap. conditions 4=5256
Ti getter pump 0=5059
Ti getter pump, with high pumping speed 0=977
Ti ion getter, anomalous currents 4=21190
Ti-ion pump, props. 2=68, 2789
Ti ion-sorption, design 4=16156
Ti, for mass spectrometers 3=16994

Vacuum technique

adsorption and desorption in partial and ultra vacua 3=18862
alkaline earth oxide coated cathodes, activation rel. to Ba and Mg getters 4=21561

Vacuum technique—contd

all-metal systems, ultra-high vacuum
 production 1=5307
 alloy formation by deposition 0=21234
 alloy vaporization, 760°-980°C, 5×10^{-7} to 10^{-9}
 torr 4=18500
 annealing in high vac., optical heating system 0=14900
 apparatus for evaporation rate and reaction
 kinetics obs. 4=17854
 arc evaporation of refractory metals 1=6688
 in atomic and nuclear research 2=17516
 automatic pumping system 3=21455
 bakeout, Al foil oven 2=11435
 balance, torsion micro, for high-vacuum work 3=7166
 ballast gas admission, into vacuum pump 2=17517

 conference, Boston (Oct. 1963) 4=16153
 conferences 2=5076, 17515, 21952
 conical basket for evaporation of metals and
 oxides 1=1627
 continuously pumped linear accelerator 1=4676
 counters, semiconductor, surface protection against Hg
 vapour 3=22043
 cryosorption, pressure response relationship 4=20815
 crystal cleavage 4=7534
 crystal fracture under vacuum to obtain clean
 surfaces 1=6146
 deposition of CdSe films 0=4693
 deposition of Cs, K, Rb, Na 3=11844
 deposition of dielectric films for capacitors 1=6562
 deposition, optical monitoring 3=11845
 deposition of radioactive materials 0=17514
 deposition of supercond. films, vapour sources 3=9525
 deposition systems, use of hollow cathode
 discharges 1=11803
 deposition vapour source for semicond. films 4=26090
 desorption, rubber, of gas, diffusion mechanism 4=4676
 detection of single ions using W point cathode 4=21196
 diode leak-detector control unit 2=1369
 discharge-tube clean-up, electrical method 1=9433
 discharge tubes, contamination from walls due to
 ions 2=9328
 drying, by sublimation 2=9327
 education course 4=18255
 electric breakdown, by particle impact on electrodes 3=380
 electrical clean-up of gases, calculations 0=109
 electroluminescent panels, preparation 0=18153
 electron diffraction examination, of solid films 2=4509
 electron gun, high-power 3=14649
 electron micrographs cinematography 4=17828
 electron tube, demountable, using moulding seal 4=5716
 electron tube residual gases, conference 4=11718
 electron tubes, gas evolution and absorption 1=18478
 electron tubes, methane pressure changes, rel. to cathode
 emission 4=21576
 electrostatic time-of-flight spectrometer 0=2402
 encapsulation of semiconductor devices 0=9984
 epoxide resins, as vacuum-tight materials 2=21958
 evacuation kinetics, effect of sorption 2=21950
 evaporated films, recording microbalance 4=5263
 evaporation, electron bombardment apparatus 0=5065
 evaporation, glass surface contamination 3=21461
 evaporation masks, registration in situ 2=19642
 evaporation method without irradiating object to be
 coated 3=21178

Vacuum technique—contd

evaporation of multilayer films, technique 1=11802
 evaporation, optical monitoring 3=11845
 evaporation on to organic films, prep. 3=25773
 evaporation by r.f. levitation, applic. to Si and Ge 2=23914
 evaporation rate meas. and control using "nude"
 ionization gauge 1=5104
 evaporation rate meas., from crystals 0=106
 evaporation source, for refractory materials 3=5553
 evaporation, sources, reflection 3=16135
 exoelectron emission from surfaces, examin. 0=3780
 fatigue measurement, apparatus 0=4566
 fatigue tester 4=20637
 feedthrough, high-vacuum dual-motion 4=2742
 film deposition by evaporation, review 1=5315
 film deposition, onto heated substrate 2=19641
 film-deposition rate, automatic control with crystal
 oscillator 2=12946
 film deposition, by slow sublimation 1=12665
 films, solid, residual stress control 4=23566
 flow, time of arrival measurements 1=160
 freeze-drying of tissues with thermoelectric unit 3=11619
 friction meas. at ultrahigh vacuum 3=25647
 friction and wear study, ultra-high vacuum
 methods 4=20639
 gas analysis, in high-vacuum systems 2=22283
 gas analysis, using omegatron 2=15662
 gas clean-up by electron collisions 1=15984
 gas cleanup, penetration depth investigation 0=9003
 gas compression by untight piston 1=15968
 gas desorption meas. by electron bombardment 4=21209
 gas desorption at rubbing surfaces 1=15983
 gas sample bottle connecting system 1=11801
 gas sorption on clean surfaces 1=18493
 gaseous desorption from Mo surface, 80°K,
 5×10^{-10} torr 4=18276
 gaseous heat conduction 0=19483
 gases, residual, analysis by desorption spectra 4=18306
 generation of clean surfaces 3=23499
 getter film interactions with ionizing discharges 4=21202
 getter flashing with electrode bombardment 4=21201
 getter, flashless, low operating temp. 4=21199
 getter gas evolution during evaporation, meas.
 methods 4=21206
 gettering, electrical in low-pres. discharge in steel
 vessel 3=7461
 getters, Ba, sorption of H_2 2=5086
 getters, Ba, in vacuum tubes, problems 2=67
 getters, Ce-Al-Th alloy, for CO_2 at high temp. 2=5087
 getters, non-evaporating, with surface adsorption and
 pore-diffusion 4=21198
 glass, aluminized, outgassing by electron bombard. 0=979
 glass cleaning techniques 0=3578, 6529
 glass, for deposition, residual contamination, electron diffr.
 study 4=13647
 glass, O_2 outgassing by electron bombardment 4=21204
 glow discharge elimination in furnace 1=6985
 high-temperature vacuum furnace 1=4507
 high-voltage armoured lead-in 3=3697
 inert-gas cleanup, discharge mechanism 0=10703
 inert gases ionically pumped into glass, thermal
 recovery 4=21205
 ion beam supersonic annular nozzle as differential
 barrier 4=24280
 ion pumping of inert gases 1=20677
 ion pumping of noble gases 1=10552
 in isotope separation, by cascade process 1=3525
 kinetic theory, appl. 3=9499
 lamellar solid cleavage studies, u.h. vacuum
 study 4=20674
 leak detection, bubble tests for gas tightness 4=27229
 leak detection using ion pump 1=4391
 leak detection, using mass spectrometer without bake-out
 or high vac. technique 0=14702
 leak detection, with omegatron 0=283
 leak detection, survey 1=4393
 leak detection, with thermal cond. gauge, sensitivity to
 var. gases and liquids 0=8723
 leak and Hg vapour detection by discharge
 spectra 4=18304
 liquid nitrogen trap, automatic feed 1=5314
 low-pressure meas. under transient regimes 2=15660

Vacuum technique—contd

low-temperature static seals 1=5312
 magnetic suspension balance 4=2508
 magnetic trap evacuation by He condensation pump 3=21456
 manipulation of Cl, NaCl-fusion cut-out 0=14703
 mass spectrometer electrostatic for residual gas analysis in high vacuum devices 1=18943-4
 for mass spectrometers 3=16994
 mass-spectrometric methods for gas desorption studies 1=9430
 mass spectrometry, review 3=12263
 mass spectrometry, at 10^{-10} torr 2=17904
 measurements, using forced periodic changes of molecular k.e. 0=6844
 metal film deposition, reduction of contamination 2=10942
 metal film resistors, prep. 0=8287
 metal film vacuum deposition, helium flush technique 1=7883
 metal-to-glass seal for cryogenic apparatus 1=11868
 metal outgassing, volume and surface effects 4=21208
 metal surface cleaning, by ion bombardment 0=8726
 metals, evap. from TiC heater 2=6850
 metals, films refractory, deposition, using spring-loaded conductors 3=9524
 metals, liquid, clean surface maintenance 2=7093
 metals, thin films, refractory 4=30672
 metals, surface purification, in vacuo, reviews 4=7699
 metallizing unit modifications 4=2745
 microbalance, helical tape, for use in high-vacua 3=21284
 motor, contamination-free 4=2743
 multiple film evaporation 1=9162
 nitrogen sorption on Ti films 3=23520
 nomenclature 4=18253
 in nuclear physics, handbook 3=2146
 omegatron, use for press. meas. in vacuum 3=3841
 optical film deposition, apparatus 1=4473
 outgassing, appl. of vac. process evaluation 2=5077
 outgassing, with mica, props. rel. to thermionic valves 2=21960
 outgassing, props. of Ni 2=5088
 outgassing speed measurement 1=5309
 oxide film deposition method 3=23955
 patterned film production, scattering effects 0=3282
 polythene capsule forming for combustion calorimetry 1=6986
 pressure and flow, choice of units 1=4383
 pressure units 1=5298
 pumping action of Cr, bomb. by electrons 2=11542
 pumping, of linear accelerators 0=2407
 pumping metal vacuum tubes, on double unit 1=4395
 purging chamber of contaminants 3=14223
 remote-opening device for vac. systems in rockets 3=3842
 replication for surface structure determinations 0=14046
 residual gas, analysis in evaporators 0=10704
 residual gas composition in vacuum systems 1=18490
 residual gas, conference 0=19224
 residual gas effects on deposited films 4=8273
 residual gases, investigation 1=18491
 residual gases in television tubes 1=18492
 review of problems in ultra high vacuum production 1=5301
 review of recent developments 1=5300
 review of recent progress, ultra high 4=8257
 review of technological advances 1=4382
 seal, coaxial line 4=29682
 seals, Al bakeable type 1=11800
 seals to quartz crystals, active-metal soldering technique 1=4165
 sealing radioactive sources 4=12172
 sealing wide bore silica tubing 4=11267
 selector valve with one knob 3=1738
 silicone materials, performance in thermal-vacuum environments 4=20414
 slide cleaning for deposition 0=110
 sliding seal 3=7256
 sorption, of activated gases, by Ti films 0=10374
 sorption meas. in u.h.r. and const. press 4=26718
 sorption, vaporization, decomposition of solids, meas. 4=5253
 sorption of water vapour on glass surface 2=6853

Vacuum technique—contd

space effects on materials, with u.v. radiation 4=20959
 stage for electro- and magneto-optical obs. at low temp. 4=16222
 surface contamination, in demountable systems, C film exam. by electron microscope 0=19239
 surface phenomena studies, ultra-high vacuum apparatus 0=14699
 symposium 0=5057
 teaching, diffusion-pumped system 1=2791
 teaching laboratory, cheap construction methods 4=18256
 temp. measurement using internal(disappearing) filament 1=11856
 use of titanium films for $\sim 10^{-9}$ mm Hg vacua 4=16157
 torsion microbalance for ultrahigh vacuum modifications 4=2510
 ultra-high, methods of production, review 4=27231
 ultrahigh, review 2=9322
 ultrahigh vac., to study physical adsorption at very low press. 4=7716
 ultra-high vac. technology, review (in Japanese). 3=179
 ultrahigh vacua, Mo vaporization technique 1=15974
 ultra-high vacuum, methods, requirements and limitations 1=2792
 ultra-high vacuum, production with oxide semiconductors, under electron bombard. 3=21457
 ultra-high vacuum production, by SiO gettering 2=9321
 ultra-high vacuum, review 1=4381
 ultrahigh vacuum, review. 3=180
 ultra-high vacuum technology 0=19223
 ultra-low pressures, review 1=18477
 units 4=18254
 units, use of mol. density for u.h.v. 4=27230
 unsupported films, production 2=21564
 vacuum circuit analogy with electric current circuit 3=21452
 vacuum sealing of leads to thermopile 1=10556
 vacuum trip unit, transistorized 1=2802
 walls, for cyclotron nuclear reaction chambers 4=16163
 windows in bubble chambers 1=3096
 X-ray monochromator isolating window 4=24778
 AgCl, outgassing props. 3=18870
 B evaporation, electron bombardment apparatus 4=14224
 C in cathode, effect on residual gases 4=21203
 Cs, deposition 3=11844
 H₂ vapour pressure measurement, 1.4×10^{-8} to 6.5×10^{-8} torr, 4.2° to 2.5°K 3=12008
 H₂ pressure regulator 4=14232
 H₂ and He continuous cryotrapping by Ar, 4.2°K 4=18271
 He diffusion in glass 1=10010
 He₂ and N₂ condensation on defined cooled surface, 2.5° to 29°K 4=8259
 K, deposition 3=11844
 Mb, films, deposition, using spring-loaded conductors 3=9524
 MgO cold cathode tube, residual gas analysis 4=21562
 Mo getters, efficiency, at liq. N temp. 4=11265
 Mo and W, pure, prep. by melting under vacuum 4=23349
 N, sorption speed during electron impact activation 4=18295
 Na, deposition 3=11844
 Na vapour etching, of sheet glass 0=21217
 O₂ detector, by chemisorption 4=10683
 Pt films by induction heating evaporation 3=19005
 Rb, deposition 3=11844
 Re, Re-W, Re-Mo props. 4=18297
 Si evaporation and film fabrication 3=20927
 Si films, electron beam bombard. 0=19423
 Ta, films, deposition, using spring-loaded conductors 3=9524
 Th and Zr alloy bulk getters, residual N₂, CO and H₂ pressures 4=21197
 Ti, as getter 0=3573
 Ti hydride gas generator, anal. of gas evolution 0=12440
 U deposition on organic backing 0=17288
 W, films, deposition, using spring-loaded conductors 3=9524
 Xe filling contamination by N₂ from Fe components 4=21207
 Zr-Al alloys, gettering props. rel. to structure 4=21200

Vanadium

- absorption spectrum in aqueous solution, crystal-field theory 1=8122
 ageing, strain, work hardening, rate, effect of dislocations 4=29021
 atom, V III spectrum meas. 3=8195
 atom, VII transition array for d^3-d^2p in LS coupling 4=6488
 atomic and electron heats, 10-273°K 0=20752
 atoms, doubly ionized, fine structure theory 4=1218
 cathode, fluorescence yield, X-ray photoeffect meas. 2=14704
 cathode, fluorescence yield by X-ray photoeffect meas. 3=6663
 crack formation, by post-irrad. thermal cycling 2=8751
 crystals, neutron diffraction spin-orbit interaction 3=18294
 diffusion, in liquid cast Fe, by electrolysis 3=5431
 diffusion of V^{48} in Ti, activation energy, frequency factor, temp. effect 4=28492
 e. s. r. in GeO_2 , amorphous and polycryst. 4=13330
 effect on mag. susceptibility of Al 0=16124
 elastic constants, for single crystals, 27°C 1=3954
 elastic moduli, 4.2-300°K 0=16200
 elastic moduli, normal to supercond. transition 2=7508
 electrical conductivity 2=10437
 electron spin resonance of V in TiO_2 1=1264
 electronic and nuclear polarization by slow neutron scattering 3=18057
 energy band structure 2=6300
 films, prep. and superconducting props., rel. to impurities 2=4494
 films, superconductivity 3=19109
 films, vapour-deposited, superconductive, use as getter 4=11481
 halides, thermal expansion at low temps., expt. 4=17369
 hardness and grain size, var. with annealing temp. and deform. 3=5137
 i.r. properties, rel. to electron groups 3=17977
 internal friction from ordering of impurities 3=20697
 ion, V^{2+} , in Al_2O_3 , R line splitting in elec. fields 4=9820
 ions, absorption spectrum, 0.4-1.2 μ , in Al_2O_3 0=20991
 ions, e.s.r. in sapphire 0=10238

Vanadium-contd

- ions, V^{2+} , e.s.r. in ZnF_2 0=10233
 ions, V^{3+} , in corundum, spectra 2=14677
 ions, V^{3+} , e.s.r. in Al_2O_3 2=4250
 ions, V^{3+} , e.s.r. in corundum 0=8086
 ions, V^{3+} , zero-field splitting in Al_2O_3 , pulsed field meas. 1=1270
 ions, V^{4+} , e.s.r. in rutile, h.f.s. of $\text{Ti}^{47,49}$ 4=23057
 ions, V^{3+} , e.s.r. in sapphire 0=1834
 ions, V^{4+} , e.s.r. in TiO_2 2=2300, 6692
 lattice freq. spectrum, Born-von Karman model 4=20184
 lattice parameters, X-ray study, absorption correction 0=1919
 mag. susceptibility and resistivity, anomaly at 245°K 1=7735
 magnetic susceptibility, 20-293°K 0=21029
 mobility of interstitial O and N, effect of pressure 1=2396
 Mössbauer effect by Sn^{119} with 23.8 keV γ -rays 4=6687
 n.m.r., normal and superconducting 4=20627
 n.m.r., supercond., Knight shift component separation 4=20625
 n.m.r. of V^{51} , temp. depend. 25°-330°K 4=20626
 nuclear magnetic relaxation, 20.4-292°K 1=10193
 nuclear spin-lattice relaxation 1=1284
 oscillator strengths of neutral atom 0=20590
 paramag. resonance, V^{4+} in TiO_2 0=13879
 phonon frequency distribution, by neutron scatt. 2=18523
 phonon spectrum 2=8159
 phonon spectrum investigation by neutron scattering 3=17641
 plastic deformation at low temps. 3=13351
 sound velocity, effect of high mag. field 3=8356
 specific heat, calc. from elastic constants 2=8166
 specific heat, lattice, temp. var., renormalization, calc. from vibr. 4=1400
 specific heat, 65°-105°K 2=23077
 spectra, in solar photosphere 0=14415
 spectrum, Q correction 0=13414
 spin resonance, in Si 0=4514
 stress relaxation in samples containing interstitial O and N, effect of pressure 1=2396
 supercond., thermal conductivity 3=1904
 supercond. transition temp., effect of Fe in dilute solutions 1=3882
 supercond. wires, quantum interference effects 4=24499
 superconducting, absorption, u.s., and $2\epsilon_0$ 4=16377
 superconducting, absorption, u.s., shear, 75-225 Mc/s, and $2\epsilon_0$ 4=16355
 superconducting, circulating current, shot noise 4=21416
 superconducting, effects of dislocation config. 4=27426
 superconducting energy gap, ultrasonic meas. 4=2924
 superconducting, far-i.r. absorption 0=14933
 superconducting films, energy gaps 4=14530
 superconducting films prep. by "protected sputtering" 4=18587
 superconducting, pressure and volume effects, crit. mag. field, Fermi surface 1=258
 superconducting thin films, residual resistivity and critical current 4=18618
 superconducting, transverse u.s. atten. for $q/\lambda < 1$ 4=6729
 superconductive two-component diffusion films containing Si 4=5527
 targets, deuteron interactions with O, C and Hg impurities 4=22167
 thermal cond., normal and supercond. 0=10843
 thermal cond., normal and supercond. states 2=6292
 thermoelectric power, 4.2°-340°K 3=13140
 vacuum-arc evaporation 1=6688
 variation of elastic moduli at superconducting transition 1=11884
 vibration spectra and spec. heat, calc. 3=12914
 vibration spectrum, calc., compared with neutron diffraction spectrum 0=1552
 X-ray abs. spectrum, in various cpds. 0=1737
 X-ray absorption spectrum 1=2449
 X-ray diffraction pattern, diffuse streaks due to N impurity 0=8204
 X-ray lines, K, from false tube, meas. 4=20453
 yield and flow stress meas., 4.2 - 373°K, and thermally activated flow mechanism 4=28970-1
 Young's modulus data, rel. to temp. 4=30788
 Young's modulus, temp. variation 1=2504

Vanadium—contd

- V II, d³p config. 1=806
 V²⁺, e.s.r. in CaO 3=3181
 V²⁺, e.s.r. in MgO, lattice imperfection effects 4=26440
 V²⁺ embedded in Si, e.s.r. 3=20639
 V²⁺, 'forbidden' paramag. resonance in ZnSiF₆. 6H₂O 1=3928
 V²⁺ spectrum in octahedral coord. crystal 3=12768
 V³⁺, in corundum, e.s.r., spin Hamiltonian const. 1=20238
 V³⁺, in corundum, mag. suscept. 3=20548
 V³⁺, e.s.r. in Al₂O₃ (corundum) 1=20236
 V³⁺ ions, e.p.r. in Al₂O₃ (corundum), hyperfine transitions, calc. 3=20659
 V³⁺, line broadening of P³¹ n.m.r. absorpt. in H₃PO₄ 3=13316
 V⁵¹, n.m.r. in Cr-V alloys 3=8741
 V⁵¹ n.m.r. in V-Al alloys 4=26455

Vanadium compounds

- binary and ternary alloys, crystal structure 4=13612
 borides and carbides, thermoelec. power with Cu 1=12465
 carbide, thermoelectricity 1=14532
 complexes, trivalent, optical and magnetic props. 4=10247
 dihalides, linear symmetrical, mean amplitudes of vibr. and Bastiansen-Morino shrinkage effect 4=30441
 monoxide, non-stoichiometric, thermodynamic props. and vacancy interaction energy 4=28390
 oxides, energy spectrum, current carriers 3=6605
 spinels, prep. and elec. and mag. props. 3=12934
 spinels, valency semicond., temp. depend. 0=4366
 vanadyl complexes, electronic spectra 4=22901
 vanadyl sulphate, e.s.r. 1=20200
 V alloys with Ti, Cr, Tc, Knight shifts 3=3204
 V alum, trivalent, mean electric susceptibility 3=20049
 V ammonium alum, mag. props. 0=6214
 V-base solid solns., mag. suscept. 3=18062
 V boride, X-ray abs. spectrum of V 0=1737
 V borides, carbides and nitrides, elec. props. 1=5707
 V carbide, X-rays abs. spectrum of V 0=1737
 V corundum, polarized i.r. absorption spectrum 1=3846
 V, n.m.r., shifts, line-widths and intensities 1=10194
 V nitride, X-ray abs. spectrum of V 0=1737
 V oxide, e.s.r. 1=20200
 V oxides, elec. cond., composition depend. 0=6128
 V oxides, lower, semicond. props. 2=23412
 V oxides, various, temp. variation of susceptibility 0=10101
 V-permendur, polycrystalline sheets, anisotropy 1=17963
 V phosphate glass, elec. conductivity rel. to composition 2=8306
 V system, i.r. spectra 3=20491
 V, with transition elements, influence of exchange 0=8959
 V with transition elements, superconductivity 0=8958
 V³⁺ alums, mag. susceptibility 0=18167
 V³⁺ hydrated salts, paramag. behaviour 3=6691
 V³⁺ paramagnetics, susceptibility and anisotropy 0=8033
 V³⁺ salts, hydrated, mol. orbital theory of ligand field 4=20520
 VAl, α' -type, structure 0=3226
 V-Al alloys, V⁵¹ and Al²⁷ n.m.r. 4=26455
 VAl₃, hot hardness 2=2337
 VAl₄, structure 0=3226
 V₃Au, V₃Pt crystal structure, atomic, change from Cr₃Si to Cu₃Au by O, N or C impurities 4=13606
 VB, paramag. props (150-800°K) 3=1124
 VBO₃, with calcite structure, X-ray evidence 4=29105
 VC, dissociation press. and thermodynamic props. 3=1386
 VC, work function 3=14616
 V₂C, supercond. invest. down to 1.98°K 3=7406
 V(CO)₆, paramagnetism obs. by n.m.r. 4=2709
 VCl₃, vapour spectrum, Jahn-Teller splitting 2=6162
 VCl₄ molecules, θ kK band intensity and molecular association 4=3880
 VCl₄, spectra, i.r., Raman, vibr. bands 4=1281
 VCl₄, spectrum, u.v. 4=9749
 VCl₄, vapour spectrum, Jahn-Teller splitting 2=20842
 V-Co-Fe alloys, mag. props., effect of elastic stresses 3=3115
 V-Cr alloys, n.m.r. and magnetic properties 4=10346
 V-Cr alloys, thermodynamic props 4=22518
 V-Cr, elec. resist., 20-293°K 2=10437
 V-Cr, mag. susceptibility 1=1195
 V-Cr, paramag. susceptibility, rel. to temp. 3=999

Vanadium compounds—contd

- V-Cr, paramagnetic susceptibility 2=4209
 V-Cr solid solutions, electronic specific heat 3=8367
 VF₅, i.r. spectrum from 3-25 μ 4=25687
 V-Fe alloy, atomic magnetic moment by neutron diffraction 3=1105
 V-Fe alloys, average ferromagnetic moment 3=11055
 V-Fe alloys, thermodynamic props. from v.p. meas. 4=10441
 V-Fe, ferromag., localized electron spins 3=8393
 V-Fe, mag. susceptibilities and n.m.r. meas. 3=23141
 V_{0.33}Fe_{0.67}, nuclear mag. spec. ht., 1.6-4.2°K, internal field 1=8882
 V-Ga, diffusion films, prep., superconductivity mag. field, heat treatment effect 4=27438
 V-Ga, films, diffusion, supercond., transition temp. 3=16880
 V₂Ga₅, decomposition into V₆Ga₇ 4=10632
 V₃Ga, Knight shifts, 1.8° to 300°K, rel. to superconductivity 3=336
 V₃ (Ga, Si, Ge, As, etc.), n.m.r. Knight shift in supercond. temp. var. 4=20625
 V₃Ga, supercond., evidence for negative surface energy models 3=5591
 V₃Ga superconducting films, getter sputtering for prep. 4=14231
 V₃Ga, superconducting, thermodynamics 2=17732
 V₃Ga, superconducting, mag. field penetration depth 4=27437
 V₃Ga, superconducting, phonon contrib. calc. of high T_c and H_c 4=29842
 V₃Ga, superconductivity, in high mag. fields 2=11570
 V₃Ga, superconductivity and mag. props. 3=14455
 V₃Ga, superconductivity, press var. 4=18619
 V₃Ga, V₃Si, crystal electron band struct. model, peak density at Fermi surface 4=20245
 V₃Ga, wires, supercond., transition temp. 3=16880
 V₆Ga₇, decomposition into V₂Ga₃ and V₈Ga₉ 4=10632
 V₃Ge films, superconducting, size effects 4=14538
 V₃Ge superconducting films, getter sputtering for prep. 4=14231
 V₃Ge, superconducting, mag. field penetration depth 4=27437
 V-H alloys, constitution and mag. susceptibilities 2=12922
 V-H alloys, internal friction, H conc. depend., -190° to +210°C 3=23286
 V-H system crystal struct., atomic 4=30856
 V(dipy)₃I₃, mol. electronic struct., ligand field theory 4=22412
 VMn, ordered structure of CsCl type 4=13613
 V-Mo-C, crystal structure and phase transform. 2=17034
 VN, n.m.r. of V⁵¹ 4=23076
 V-Ni solid solutions, electronic specific heat 3=8367
 VO, metal-to-insulator transition, effect of press. 3=1254
 VO, molecular vibr. Franck-Condon factors, r-centroids, $\frac{1}{2}\Delta$ - $\frac{1}{2}\Delta$ system 4=9730
 VO molecule, Franck-Condon factors, calc. 2=16521
 VO molecule, vibrational spectrum 2=14254
 V-O, spectrum, i.r. absorpt., vibr., structure 3=22574
 VO₂ (x = 0.75-1.74), structure and thermo. e.m.f. 0=18353
 VO₂, crystal structure 2=15029
 VO₄, phase transition, thermal effects 4=20718
 VO₂, powdered, diffuse reflectance meas. 0=18112
 VO₂, resistance through semiconductor-to-metal transition, rel. to press. 4=28576
 VO²⁺ ions, n.m.r. in aqueous solutions 3=14187
 VO²⁺, mag. props. in dilute systems 0=8084
 VO²⁺ solutions, paramagnetic relax., var. conc. and added HCl and [VO.H]³⁺ 4=14188
 VO²⁺ in Tutton salts, e.s.r. 4=20603
 V_nO_{2n-1} (4 < n < 8), crystal structure, atomic, calc. 4=7647
 V₂O₃ crystals, resistivity meas. 3=2927
 V₂O₃, elec. conduction and thermoelectricity 2=10496
 V₂O₃, low-temp. X-ray diffraction studies 0=12046
 V₂O₃, magnetic transitions 0=11799
 V₂O₃, metal-to-insulator transition, effect of press. 3=1254
 V₂O₃, neutron diffr. study, 168-533°K, structural transition 0=6363
 V₂O₃, phase transformation metal to insulator, press. var. 4=17773
 V₂O₃, semiconductor to metal transform. 4=25993
 V₂O₄, phase transformation, metal to insulator, press. var. 4=17773

Vanadium compounds—contd

- V_2O_4 ultra fine particles, antiferromag., susceptibility meas. 3=1095
 V_2O_5 , absorption spectrum 1=12498
 V_2O_5 , atomic distances 0=4650
 V_2O_5 , e.s.r. of partially reduced crystals 3=15950
 V_2O_5 , effect on Bi_2O_3 polymorphism 4=23253
 V_2O_5 , effect on dielec. props. of barium titanate 0=7982
 V_2O_5 , ice growth on 0=6335
 V_2O_5 , NMR anisotropy 1=14825
 V_2O_5 , non-stoichiometric, spectrum, reflectance and bandgap 4=10197
 V_2O_5 , n.m.r. dispersion, and V^{51} elec. moment 4=25264
 V_2O_5 , semicond. props. 2=4041, 14564
 V_2O_5 sols, streaming birefringence 0=3333
 V_2O_5 , thermoelec. power, rel. to nuclear irradi. 2=18761
 V_2O_5 type, current carriers, energy spectrum extremum 4=6784
 V_2O_5 , X-ray abs. spectrum of V 0=1737
 $VOCl_2$, aqueous soln., e.s.r. line shape, rel. to cond. and temp. 2=61
 $VOCl_2$, aqueous solution, e.s.r. line shape rel. to conc. & temp. 3=150
 $VOCl_2$ dil. solns., e.p.r. hyperfine line width 3=5451
 $VOCl_2$, dil. solns., e.s.r. hyperfine line width 2=15621
 $VOCl_2$, solns., $V^{50,51}$ e.p.r., h.f.s. 4=16126
 $VOCl_3$, force constants and thermodyn. props. 2=14246
 $VOCl_3$, potential constants 0=5900
 $VOCl_3$ in $LiCl-KCl$, e.s.r. 4=10315
 $V_2O_5-Cu_2O$, structure and elec. props. 2=8359
 VOF_3 , solns., $V^{50,51}$ e.p.r., h.f.s. 4=16126
 VOF_3 , i.r. spectrum from 3-24 μ 4=25687
 $10 V_2O_5 \cdot 90 M_2O_5$ ($M = Nb, Ta$), tetragonal phase 4=26666
 $VO_{0.5}-VO_{1.50}$, paramagnetic susceptibility 2=12757, 14765
 $V_2O_3-V_2O_5$, phase diagram, magnetism 3=15779
 $V_2O_3-V_2O_5$ system, elec. conductivity 4=12841
 V_3Pt , superconducting, mag. field penetration depth 4=27437
 $V(Si)_2$, (patronite) crystal struct., atomic 4=26677
 V_2S , crystal structures of α and β forms 0=4629
 V_2S_8 , crystal structure and vacancy order 4=26678
 $VSO_4 \cdot 7H_2O$, optical absorption, 9000-35000 cm^{-1} , electronic states of V^{2+} 1=2448
 VSb_2 , elec. cond., theory 0=13577
 V_3Se_4 , crystal structure 3=1346
 $V-Si$, diffusion films, prep., superconductivity mag. field, heat treatment effect 4=27430
 $V-Si$, films, diffusion, supercond., transition temp. 3=16880
 $V-Si$ films, hard supercond., prep. and props. 4=24501
 VSi_2 , X-ray absorption spectrum 1=2449
 V_3Si films, prep. and supercond. props. 3=3967
 V_3Si , supercond., evidence for negative surface energy models 3=5591
 V_3Si superconducting films, getter sputtering for prep. 4=14231
 V_3Si , superconducting, mag. field penetration depth 4=27437
 V_3Si , superconducting, phonon contrib. calc. of high T_c and H_c 4=29842
 V_3Si , superconductivity, effect of elements replacing V 3=335
 V_3Si , superconductivity and mag. props. 3=14455
 V_3Si , superconductivity, press var. 4=18619
 V_3Si , wires, supercond., transition temp. 3=16880
 V_3Si , X-ray absorption spectrum 1=2449
 V_3Si , X-ray absorption spectrum 1=2449
 $V-Ta$, supercond., specific heat in high mag. field 4=8576
 $V-Ta$ (5 at. %), supercond., thermodynamic props., magnetization 4=18620
 $V_{0.5-0.7}Tc_xAl_{0.5-0.3}$ (x up to 0.60), mag. susceptibility, n.m.r. Knight shift 4=7357
 $V-Ti$, V diffusion 2=14455
 $V-Ti$, superconductivity crit. current and field 4=18621
 V_3X intermetallic cpds., susceptibilities and Knight shifts, theory 1=5062
 V_3X intermetallic cpds., thermoelec. powers 4=1701
 V_3X ($X = As, Au, Co, Ga, Ge, Ir, Pt, Sb, Si$), n.m.r. properties 0=19561

 Si 1=4514
 SiF₄ 3=21636
 SnSe, 773°-898°K 3=21637
 SnTe, 792°-933°K 3=21637
 SnTe(g) and Te₂(g) in equilibrium with SnTe(c), partial press. 4=24462
 Sr, 500-650°C 4=8523
 Ti-Mo alloys, 1600°-1800°K 4=8524
 Tl selenides, temperature-pressure relations 0=19201
 TiCl₄, liquid 4=24448
 U 0=10699

Vapour pressure—contd

U, effect of oxygen 3=3930
 Xe, low pressure, below 90°K 2=1175
 Xe, solid 1=1848
 Xe^{130,136}, saturated vapour press. diff. 3=21633
 Y 2=2937
 Y, 1100-1480°C 4=16302
 Zn, above GaAs and GaP, rel. to solubility 4=13458
 Zn, in Cu-Zn-Ni solid solutions 2=6837
 ZnBr₂, meas. rel. to gas dimerization 4=11413
 ZnCl₂, meas. rel. to gas dimerization 4=11413
 ZnSe, crystal growth 0=8163
 ZnSe, 1060°-1393°K meas. 3=1871

Vapour pressure measurement

acetone, saturated, apparatus 3=19071
 alkali metals at high temps. 4=2899
 alkali metals, 10⁻⁶ to 10⁻² mm Hg 4=373
 alloys, torsion-effusion apparatus 0=3678
 apparatus for 10⁻³-760 mm Hg, -100°C to +20°C 0=14669
 binary alloys, by radioactive tracer dew point method 4=11412
 carrier gas method, flow velocity depend. 0=14893
 in cloud chambers, simultaneously with temperature meas. 2=5538
 by differential thermal analysis 3=9660
 effusion method, metal cell 2=43
 gravimetric apparatus 2=2436
 at high temperature, using recording microbalance 4=24454
 at high-temperature, by semimicro-balance 3=5401
 in high-vacuum pumps, 2 methods 2=2790
 Knudsen furnace, electron-bombardment type 1=10626
 Knudsen cell, diffusional contribution to flow 2=19607
 Knudsen effusion technique 3=24119
 liquid mixtures, binary, radioactive tracing 2=5215
 low pressures and temp. 0=16738
 mass spectrometer and saturator method 2=132
 mass spectrometric, partial, many-components 3=24113
 mercury reservoir for demonstrations 3=151
 metals, from evaporation rate 2=11537
 microbalance technique, for Pt, Ir and Rh 2=5216
 null-point torsion effusion apparatus 0=14892
 at 1-35 atm, automatic apparatus 2=1310
 polymer solutions, instrumentation 4=29806
 porous medium, modified hygrometer 4=5228
 selenides, Knudsen method 3=24116
 solids, porous, interpret. of Knudsen results 3=24118
 spoon gauge, optical servo control 1=8091
 tellurium by electrical discharge method 1=2913
 rel. to temp. and composition of system, for vapour-liquid equilibrium study 4=11408
 thermometric, for miscible diff. press. liquids 4=24450
 total, above liquid mixtures, apparatus 4=5458
 up to 20 kg/cm² and 500°C 3=19072
 very low press., nuclear method 0=19512
 Ag, 1268 to 1462°K, calc. 4=27384
 Cr in Cr-Ni-Al alloys, 1060°-1300°K 3=1872
 Cs, with Bayard-Alpert ionization manometer 3=19076
 Cu, 1367 to 1523°K, calc. 4=27384
 Fe, by torsion-effusion method, 1500°-1700°K 4=10441
 H₂, 2.5° to 4.2°K, u.h.v. conditions 3=12008
 He, manometer, two fluid 4=5483
 InSb, 783° to 1243°K 4=21362
 PbTe, partial press. in equilibrium, meas. by optical absorption method 4=21363
 V-Fe alloys, by torsion-effusion method, 1500°-1700°K 4=10441

- shells, with rot. symm., free vibr. theory 4=24287
- shells, shallow spherical 1=11805
- shells, spherical, free axisymm. modes 2=2805
- shells, spherical, non-axisymmetric modes 2=17534
- shells, thin, cylindrical, in water 1=15993
- soap films 1=188
- soft cylinder in hard skin 1=15994
- solid cylindrical layer, normal plate modes 4=255

Vibrating bodies — contd

- solid propellant rockets, acoustic rockets 0=8735
 solids, as aggregate of atoms, extension of Huygens' principle 0=13463
 sound deadeners, testing 0=16804
 sphere, radially heterog., torsional disturb. 4=258
 sphere, in rotating liquid 0=6746
 spherical shells 4=14239
 spherical shells, bending effect 4=8288
 spherical shells, elastic 0=5071
 spherical shells, flexural vibs. 3=7265
 spheroidal shell, prolate, free extensional torsional vibrations 1=2806
 spring, damped, transient response to pulselike displacements 3=9535
 spring-mass system, forced oscillation, Coulomb and viscous damping 0=19243
 square crystal plates, flexing, natural frequency and first overtone 1=186
 stability asymptotic for one degree of freedom systems 4=16166
 string, boundary flexibility effect on converted random loading 4=18310
 string, nonlinear continuous, exact soln. 3=186
 strings, amplitude depend. on reson. freq., applic. to vibroscope 0=6848
 string, displacement of mean position, theory 2=1221
 strings, large-amplitude motion 0=116
 strings, minimum bowing press. 0=16750, 19244
 strings, nonlinear stretched, frequency response 1=1776
 strings, parameters determining musical response 0=1010
 strings, response to moving noise fields 1=18539
 structure, continuous, response to random loading 3=9534
 surface wave excitation and propagation, geometrical theory 4=11273
 surfaces, sound radiation 4=24311
 surfaces, vibrometer meas., damping effects 0=117
 system with redundant coord., force const. 3=8233
 system stability, under forced frictional oscillations 0=6846
 system of transducer, concentrator, sample, equivalent circuit 4=259
 tape moving between pair of pulleys, transverse vibrations 0=12443
 thermoelastic dissipation, theory 2=5098
 thin infinite plate, reflection 1=11809
 thin plates, c.f. wavelength, energy meas. 1=15987
 torsional-mechanical oscillator, impulse driven 2=4974
 transmissibility, reduction by attachment of dynamic absorber, theory 4=21211
 tubes, thin cylindrical, longitud. vibr. 2=5092
 tuning fork, effect of gravity 2=19643
 tuning forks, analysis 0=19855
 two-degree-of-freedom systems, response to white noise excitation 1=6925
 vibration control by resilient mounts 3=14231
 vibration testing, random versus sine 1=8171
 variational principles in elastodynamics 4=29573
 viscoelastic, between par. planes 0=3502
 viscoelastic circular cylinder, forced torsional vibrations 0=19250
 viscoelastic spring, loss factors 2=17528
 wire carrying a current in magnetic field 4=2754
 wires, applic. in pressure cells 0=12399
 wires, resonance effect on aeolian tones 2=17544
 wooden beams, free flexural vibrations 0=3580
 AgCl, damping due to u.v. irradiation 1=20316
 BaTiO₃ cylindrical disks, axial modes 1=8173
 BaTiO₃ circular disk, thickness mode 3=20389
 BaTiO₃ disc and cylinder electromechanical const. design charts 4=16181
 BaTiO₃ plates, vibration patterns 0=19263
 Pb, resonance peaks, rel. to dislocation motion 3=1220

Vibrations

 cylinder under periodic shearing forces, forced torsional vibrations 1=190
 damping by viscoelastic materials on metal sheets 4=5344
 disordered chain, integrated spectrum, exact calc. 4=20188
 disordered linear system, spectrum, Schmidt's eqn. 4=17345
 dynamics of excited rigid strip mass on an elastic half space 3=18770
 earth, effect of interstellar gravitational radiation 1=8040
 effects and analysis, conference 0=8727
 elliptic boundary problem, small perturbations 4=24281
 ferromagnetics, in a.c. fields, effect of mag. props. 0=12445
 films, thin, thermal 3=4810
 flexural, Myklestad method, solution 2=15668
 forced, Coulomb damping, two deg. freedom 0=984
 forced, of free viscoelastic sphere, giving dilatation const. and complex ratio 4=15686
 Fourier method, extension to nonlinear operators 2=9329
 galvanometers, vibration-isolating mounting 2=1343
 h.f. in alkali halides, dislocation multiplication 4=1482
 heat transfer increased by transverse vibs. 3=5545
 initial, of supported beam 1=15997
 isolator, two elastic elements 4=14233
 linear dynamic system, damping 1=18498
 linear dynamic system, imposed rapid motions 2=17529
 linear lattices, new picture 1=12352
 linear mechanical oscillator 0=14564
 linear monatomic chain, effect of anharmonic potl. 3=23735
 linear random systems, output moments 2=17530
 linear system with arbitrary masses, frequency eqn. 4=8082
 linear systems, nonuniform conservative 2=15669
 longitudinal modes of linear chain, with many-neighbour interact. 4=20179
 longitudinal, in viscoelastic rod 4=5273
 magnetoelastic, cond. plate and bar in a mag. field 3=16679
 magnetoelastic, cond. plate in a mag. field 3=16680
 magnetohydrodynamic, in cylindrical cavity 1=9679
 magnetomechanical, Chladni figures 2=4230
 materials during ultrasonic machining, internal stresses 4=2756
 mechanical, effect on break-up of water jet in air 4=21084
 mechanical impedance, mobility, analytical expressions 3=7259
 Melde's expt., subharmonic oscillation 0=6847
 metals, amplitude rel. to int. friction 4=1912
 nonlinear asymm., under random loading 3=16675
 nonlinear, use of method of averaging 4=16165
 nonlinear, orbitally stable solutions 0=6537
 nonlinear, under random loading, analysis 3=16674
 nonlinear, self-sustained thermally driven, in closed pipe, analysis 4=5281
 non-linear system activated by periodic force, sufficient condition of stability 3=9526
 nonlinear systems, two-tensor phase-space method 2=5091
 nonlinear, in weak external fields 0=16602
 nonlinearity effects in beam vib. problems 4=2753
 oscillations damped without influence on frequency 1=18497
 oscillator, hard-spring, randomly excited 1=15995-6
 oscillatory parametric control 0=6545
 pipes in forced vibration, pressure determination 1=9436

Vibrations—contd

- prolate-spheroidal shells, axisymmetric vibs., perturb. soln. 3=1744
 random 0=982, 10706
 random, of nonlinear systems, perturb. techniques 4=2751
 random responses, zero crossings and peaks 4=2750
 resonance, nonlinear, generalized Van der Pol eqn. 2=9330
 resonance testing with n degrees of freedom 3=1745
 resonances for periodic excitation with perturbation 4=21210
 response of structures with finite mechanical impedance 1=18495
 review of Soviet work 0=6845
 rigid bodies in elastic medium, rotation 3=7264
 ripple tank for wave phenomena demonstration 1=4231
 rod, thin, propag. of elastic disturbances 3=14232
 shock mountings, response to transient displacements 1=15998
 shock waves, vibration relax., calc. 3=23969
 skin sensitivity 3=3648
 stability, non-linear oscillating or rotating systems 4=16164
 stability, Routh-Hurwitz and Markov criteria 0=8728
 stress tensor, asymmetric, continuous medium, mechanical and e.m. fields 3=19420
 string, incompletely flexible, lateral bending vibrations, soln. by WKB method 1=4
 structural fatigue, random and swept sinusoidal vibrations 2=17525
 structural vibration processes 0=19334
 surface, radiation field and external force, reciprocity relation 2=17524
 systems with nonlinear boundary conditions 4=257
 theory, differential equations, integration 3=18697

Viscoelasticity—contd

- rod, stress waves, finite and infinite cases 0=14714
 rubber-like polymers 3=11167
 rubber mixtures, viscosity rel. to compression, in
 plastometer 2=12852, 17418
 rubber, natural vulcanizates, cross-linked 4=10400
 rubber, relation to friction 3=16013
 rubber, strain dependence 0=697
 screw dislocation, in viscoelastic medium 2=16655
 second-order fluids, normal stress effects 4=5136
 shear coefficients, in sonic region 2=1146
 shear, linear isotropic viscoelastic solid 4=23090
 shear waves propag., viscoelastic medium 3=11852
 shells and plates, transverse vibrations, eqns. 1=15989
 shells and plates, transverse vibrations, eqns. 1=18499
 silicone liquids, under cyclic shearing stress 0=8597
 sinusoidal oscillation of medium between parl.
 planes 0=3502
 soils, meas. under dynamic loading 1=3956
 solid propellant rocket, acoustic resonance 0=8735
 solids, dynamic props., meas. 3=13371
 sphere, change to torus by random impacts 0=55
 stability in linear viscoelastic region 0=8576-7
 stability of multilayered viscoelastic media 4=2621
 stress meas. by gauge in elastic inclusion 4=7362
 stress tensor for isotropic materials 3=7159
 stress waves, near and far fields, visco-elastic
 solids 4=18320
 tars, meas. under dynamic loading 1=3956
 thermal stress problems in temp. dependent viscoelastic
 media 1=15762
 thermodynamic theory 3=1658
 thermodynamics, thermomechanical, fracture and
 birefringent phenomena in visco-elastic media 4=18130
 time-temp. superposition principle, appl. to relaxation
 or crystalline polymers 1=7820
 variational theorems 0=4560
 vibrating sphere, viscoelastic waves, dilational
 const. 3=21476
 vibration excitation, space damping rel. to time
 damping 2=1219
 viscoelastic liqs., suitability of viscometer
 geometries 4=16075
 viscoelastic materials, dislocations 1=19776
 viscoelastic medium between rotating
 disks 1=4306
 viscoelastometer, for flow and elastic recovery
 measurement 2=4984
 Voigtian material, 3-dimens. rheological eqn., for large
 deformation 0=21129
 wave velocities in indefinite medium 1=11511
 waves, longitudinal, "superviscous" decay 2=7275
 waves, reflection and refraction at interface 2=7277
 Se, amorphous, rel. to isothermal vol.
 contraction 2=6287

Viscometers

- air, capillary flow, temp. depend. meas. 4=5216
 automatic recording 1=11735
 bar viscometer with conical annulus 1=2728
 for birefringence and viscosity meas., simultaneous, in
 polymer solns. 4=11157
 calibration, NBS oil samples, 0.02-450 P 3=9421
 capillary, data reduction 0=12402
 capillary, elimination of kinetic energy effect 1=4302
 capillary, kinetic energy correction term 3=109
 capillary, mean effective pressure head, calc. 0=63
 capillary, with negligible k. e. correction 0=6729
 capillary, for non-Newtonian liquids 0=8595
 capillary, for non-Newtonian liquids 4=21075
 capillary, +150° to -150°C 2=1118
 capillary, theoretical evaluation 0=6730
 capillary, unsteady flow transpiration type, for Ar,
 Kr and Xe 4=27214
 coaxial-cylinder type, for non-Newtonian fluids 1=6824
 coaxial-cylinder type, for thixotropic fluids 1=109
 concentric cylinder type, for up to 3000 atm. 1=106
 cone and plate, approx. asymptotic theory 4=21077
 cone-plate, flow vortices 4=21079
 cone-plate, for non-Newtonian fluid 2=1119
 cone and plate, oscillatory expts. 4=16075
 cone-plate, use for radial flow meas. 2=9245
 counter balanced sphere, for molten oxides, up to
 1750°C 3=14116

Viscometers—contd

- with damped torsional oscillation 1=107
 electroviscometer, free-flow, design and
 calibration 1=18348
 falling-sphere, end effects 1=10475
 for gases, under high rates of shear 2=7234
 for gases, over range of temp. and press. 3=7223
 gases, transpiration through capillary 3=14191
 glass viscosity meas., const. temp. and stress 4=4683
 interfacial, for monolayer studies 1=15782
 for liquids up to 500°C and under pressures up to
 20 kg/cm² 4=18151
 for metals, low melting-point 1=18347
 for non-Newtonian measurements, design factors,
 Ferranti model 0=19044
 oscillating cup, theory 0=16667
 oscillating cylinder, amplitude of oscill. formula 0=19043
 oscillating cylinder, graphical method 0=6732
 oscillating cylinder, for Newtonian liquids, theory 0=12401
 oscillating-cylinder type, for elastic and non-elastic
 liquids 1=6820-1
 oscillating-cylinder type, use for viscoelectric
 liquids 1=6822
 oscillating cylindrical crucible, absolute meas. 0=10632
 oscillating disk, between fixed plates, theory 0=16671
 oscillating disk, use of quartz strands 4=13447
 oscillating disk, relative meas. 0=16722
 oscillating disk, theory 0=15669-70
 oscillating disk, theory and exper. on 11 gases 0=16723
 parallel plate, theory 0=6733
 penetrometer for routine testing of bitumens 3=1226
 plunger, wall effect in flow of lubricating greases 0=14577
 review 3=14113
 rolling ball, non-Newtonian flow 4=14110
 rolling-sphere for structured liquids 0=14575
 rotating cylinder, with stability modulation 3=1664
 rotating disk, non-Newtonian liquid flow 0=10633
 rotating disk type, for gases 1=4364
 using rotating solids of various shapes, test 3=1663
 rotational, end correction 2=15540
 rotational, for non-Newtonian behaviour, high
 press. 2=15539
 suspended-level, automatic timing, optical
 technique 2=7181
 torsional vane, for foam 0=14576
 vibrating wire type 4=29600
 viscoelastometer, for flow and elastic recovery
 measurement 2=4984
 viscometry, rel. to Navier-Stokes equation 1=11735
 for N₂ compressed to 5000 bars 3=14190

Viscoplasticity

See Plasticity

Viscosity

- turbulence criteria, in rotating gravity field 4=18148
- turbulent, order-of-magnitude analysis 2=11338
- turbulent vortex, flow and energy separation analysis 1=18375

Vortices—contd

- viscoelastic liquids, diffusion 0=16680, 19072
- vortex motion study with coloured liquid 1=9373
- vortex motion, in transport process systematization 3=5392
- vortex street development, numerical soln. 3=18782
- vortex tube 1=163
- waves, on quantized vortex lines, in rotating He II 0=8907
- H₂O, carbonated, tornado model 4=10705
- He liquid, central macroscopic, in boiling He I and conservation in He II 4=11447
- He II liquid films 4=21371
- He II liquid, Onsager—Feynman-type, above λ point, possibility 4=11448
- He II, liquid, quantized, and critical heat flow, var. tube dia. 4=16322
- He II, liquid, vortex lines near a wire, theory and expt. 4=8548
- He II liquid, vorticity, onset and growth 4=24475
- He II, quantized, by rotation 2=5230
- He II, superfluid, meas. 4=16324

Water

See also Ice; Seawater; Steam.

absorption and photoionization cross-sections 4=28218
 absorption spectra, 1850 to 4000 Å 4=11249
 absorption spectra, u.v., of H_2O , HDO , D_2O 1=852
 with acetic acid-butane, 3 coexisting phases, critical phenomena 4=24442
 acoustic absorpt. in shallow water, surface wave effects 4=14276
 acoustic array, for wide-freq. bands 2=5118
 acoustic field of plate waves in water layer 0=19284
 acoustic impedance in circular tubes 1=11758
 acoustic impedance, 3.2 Gc/s 3=18934
 acoustic sawtooth waves, form analysis 0=19309
 acoustic square-wave propag. 0=123
 acoustic streaming, velocity 0=19306
 acoustic streaming, viscosity ratio 0=6880
 acoustic wave, plane progressive, prod. by quartz transducer 3=16705
 acoustic wave propag. 0=2196
 acoustic noise, due to cavitation 2=11454
 acoustic power meas. using reverberation 4=2799
 acoustic propag. in, plate waves over stratified bottom 1=16016
 acoustic propagation in plane layer with disturbed surface 1=9448
 acoustic radiation field for shallow layer 4=21240
 acoustic scattering from pair of fluid spheres, expt. 4=14292
 acoustic transient propag. 4=21128
 acoustic transmission, in shallow water, long-range, theory 2=19655
 acoustic transmitters and receivers 0=12458
 adhesion energy, on alkali halide crystals 2=9250
 adsorbed on charcoal, n.m.r. relaxation 4=29193
 adsorbed on γ -alumina, dielec. props. 2=8891
 adsorbed on alkali halides, i.r. study 0=10375
 adsorbed on Fe, i.r. spectrum 2=23963
 adsorbed on Ge, as acceptor 2=2143, 8325
 adsorbed on Ge, effect on carrier recomb. 2=8329, 10466, 18676, 23337
 adsorbed on glass, dielectric behaviour 3=17950
 adsorbed on LiF, dielectric admittance 3=10880
 adsorbed on mica, dielectric behaviour 4=21149
 adsorbed on quartz, thermodyn. quantities 2=2435
 adsorbed on Vycor glass, freezing 0=12118
 adsorption in $\text{AgI-KI-H}_2\text{O}$ 3=23522
 adsorption of aromatic vapours on surface 4=29616
 adsorption on cellulose, effect on microwave permittivity 4=1656
 adsorption, by Ge surfaces 0=12115
 adsorption on Hg surface 2=1126
 adsorption on n-type Ge powder 3=6890
 adsorption, thermodynamic quantities correl. 2=2432
 adsorption on W, 80°-400°K 2=8897
 aerosols, droplet interaction 1=11630
 aerosols, nucleation 1=11627
 air bubbles, nonlinear oscillations 0=6865
 air content, dissolved, meas. 0=21264
 with algae suspension, u.s. absorption 0=8750
 α - and β -activity meas. 0=5691
 α -particle range 0=1322
 atmosphere, saturation vapour press. rel. to density, intermolecular attractions 3=18495
 boiling boundary layer, vapour content distrib. by β -translucence 0=10805
 boiling, bubble growth rate 2=5217
 boiling, cooling nichrome wire, in centre of glass pipe 3=9661
 boiling, forced circulation, press. drop prediction 4=24449
 boiling heat transfer at coexistence of nucleate and film regions in saturated and subcooled H_2O 4=27379
 boiling, heat transfer from Ni wire in subcooled and boiling water 4=11417
 boiling from Hg surface 4=24447
 boiling, on Ni wires, surface oxidation temp. effects 4=11423
 bond energy calc. 4=6550
 bond study 0=8666
 bubble formation 0=16682-3
 bubble rise velocity, effect of mass transfer 1=12857
 bubbles of steam, upward trajectories, condensation effects 4=24152

Water—contd

cavitation, single-bubble mechanism 1=134
 cavitation, ultrasonic, nucleation by fast neutrons 4=5142
 cavitation erosion, dependence on dissolved gases 1=10489
 chemical binding, electronic struct. effect, energy calc. 4=30446
 chemical decomposition, by u.s., no change in H isotope ratio 4=13745
 chemical reactions with CS_2^+ , products obs. 2=8912
 Cherenkov radiation on γ -irrad. 3=2239
 cluster about Cu^{2+} , in CuSO_4 soln. 1=11756
 coalescence of drops and surfaces 1=11745
 compressibility, adiabatic, lowering by LiNO_3 3=18807
 compressibility, 5-60°C 0=12400
 compressibility, temp. depend. 0=6793
 condensation coefficient calc. 4=21359
 condensation, effect of adsorption on formation of liquid embryos 4=10718
 condensation meas., by T tracer 4=21360
 condensation on, from atmosphere 0=5211
 condensation on shock-tube walls 4=18496
 condensation from water vap.—inert gas mixture 3=14425
 condensation from water vapour 4=10476
 condensed film, optical props. 0=740
 conductivity, electrical, deionized, increase by ultrasonics 3=18830
 conductivity, thermal, up to crit. point 4=18194
 content gauge, n. scatt. for soil and concrete, optimization 4=29243
 convection, from horizontal rotating cylinder, var. Reynolds and Prandtl numbers 4=5420
 convective circulation induced by evaporative cooling 1=10481
 cooling, in mag. field 2=125
 critical constants, determ. from exper. data 4=29813
 critical heat load, on boiling 2=15818
 of crystallization, loss, exo-electron emission during 3=5689
 crystallization of supercooled, use of Ag I 3=11398
 in crystals, low-freq. motions, study by neutron inelastic scattering 4=20176
 decomposition by light, using anthracene crystal 1=1488
 decontamination from radioactivity, filter efficiencies 2=4523
 degassing and boiling mechanisms, stroboscopic visualization 4=8512
 density, 20×10^4 atmospheres 3=21100
 detonation pressure meas. and eqn. of state 3=1751
 diamagnetism of vapour, calc. 0=17795
 dielectric const. decimetre meas. 4=24227
 dielectric const., Onsager's equations, refr. index choice 3=14176
 dielectric constant, in decimetre wave region, meas. 2=13352
 dielectric constant, 0°-40°C 2=11379
 dielectric polarizability, temp. var., cavity radius, from refractive index 3=23899
 dielectric prop. changes on adsorption by solids in air 4=20825
 dielectric props., review 1=6868
 dielectric properties, effective, rel. to ion hydration 2=10982
 dielectric relaxation time, temp. dependence 4=21148
 diffracted light, frequency shifts 3=7210
 diffusion of butanol, trajectories, finite cell 3=18806
 diffusion in glass, conc. dependent 4=9987
 diffusion in Na carboxymethyl cellulose gel 3=1403
 diffusion in solids, new meas. method 3=8448
 diffusion of solutes, across oil/water interface 0=8656
 diffusion, vapour, in air, teaching, meas. 3=21425
 diffusive motions in, cold-neutron scatt., calc. and expt. 0=14648-9
 diffusive motions in, from neutron scatt. 0=79
 dissociation, electrolytic, r. f., initial rate press. var. 4=26759
 distilled, sea, heavy, light absorption 3=16626
 distilled, sound velocity 0=19275
 distilled, surface tension, effect of electrostatic fields 2=11347
 distilled, viscosity, in flow through pipes 3=108
 doped, mass spectrographic determination 1=11641
 double refraction in strong shock waves 3=7205

Water—contd

- drop condensate, in steam flow 2=9294
 drop evaporation, influence of isoamyl alcohol film 1=10494
 drop, Leidenfrost phenomenon at 100°-500°C 3=7389
 drop shapes under low gravity, 1 litre in contact with Zn stearate plane 3=18668
 drop size, det. using photographic emulsions 1=12853
 droplets, charge accumulation and loss 4=5539
 droplets, 0.2-3 mm diameter, size and conc. meas. by drop-size sensor 4=10700
 droplets, surf. tension, at critical points 4=8159
 droplets, vapour exchange with environment 3=294
 drops, in air, damped oscillations 0=14611
 drops, coalescence and bouncing at air/water interface 4=24154
 drops, disintegration in elec. field 4=24153
 drops, 15-500 μ m radius, prod. by vibrating capillary 3=14132
 drops, falling into water-glycerol mixture, splashes 0=8644
 drops, freezing temp., effect of electrolytes 4=21354
 drops, i.r. absorption 2=11026-7
 drops, impact on metals, pit formation 0=8142
 drops, induced charge detm. 2=15877
 drops, internal circulations 3=14133
 drops, in mist, photoelec. meas. 0=12110
 drops, radiowave back-scattering 2=4597
 drops, size, electronic disdrometer 1=12687
 drops striking water surface, energy dissipation 4=21086
 drops, submicroscopic, freezing point 3=5082
 drops, supercooled, elec. fld effect on freezing 4=11403
 drops, supercooling, electric field effect 4=368
 dynamic contact angle with air sat. with water vapour 3=1672
 e.m. field attenuation 2=3167
 echoes in, from various solids 4=14286
 effect on vitreous silica crystallization 4=23348
 elec. cond. of protons, energy of activation 1=15902
 elec. cond., in strong shock waves 0=6073
 elec. conductivity, changes caused by X-irradiation 0=19113
 electrical breakdown potential, falling drops, 23°C 2=1376
 electrical conductivity, meas. in closed system 2=15866
 electrical conductivity rel. to field 4=14184
 electrical conductivity from undehydrated insulating liquid measurements 1=10520
 electrical strength, under pulse conditions, tap and distilled samples 4=27188
 electron beam, 2.8 MeV, energy loss 1=18935
 electron effects, hydrated e spectrum and reaction rates 4=20073
 electron irradi., ionization distrib. 3=14532
 electronic structure of molecule, calc. for various wave-functions 0=7786
 emissivity, polarized, i.r., calc. 4=24217
 emulsification of water/dibutylphthalate mixtures by ultrasonics 1=20774
 enrichment in H_2O^{18} by thermal diffusion 1=821
 entropy of boiling, calc. 1=8265
 equation of state, from acoustic velocity meas. 4=8178
 equation of state, p-T, anomalies near 4, 150°C 4=5158
 equivalence factors for D_2O , neutron age calc. 0=12955
 evaporation, droplets, freely suspended and charged, in humid air 4=2891
 evaporation enhancement by foreign mols. adsorbed on surface, expt. 4=8517
 evaporation, reduction by cetyl alcohol film 0=14890
 evaporation, from surfaces coated with stearyl alcohol film 0=16922
 evaporation thro. monomolecular films 3=24114
 evaporation through mixed monolayers of long-chain n-paraffinic alcohols 4=8518
 excited by acoustic waves, reflection of e. m. waves 0=7220
 film, dynamic surface tension meas., vertical jet directed onto horiz. plate 0=5005
 film, optical props. in i.r. 4=23722
 film, Na-montmorillonite expanded in NaCl soln. 4=16091
 flow, in canals, effect of viscosity and capillarity 3=9431
 flow, critical, steam-water, pressure gradients 4=2632
 flow near collapsing bubble, rel. to cavitation 4=8149
 flow, in plastic tubes, noise, acoustic 3=5505

Water—contd

- flow, in pipes, cavity formation 0=6762
 flow in porous media, electrokinetic phenomena 3=16596
 flow, static instabilities on heating after sub-cooling 1=17230
 flow stability, in heated passages 0=6749
 flow, turbulent vortex, heat transfer and friction 0=6977
 flow, viscous, rel. to dipole orientation 3=21399
 fog droplets growth and condensation coeffs. 4=5467
 formation of self-trapped electrons ("polarons") by irradiation 0=14136
 "free volume" and viscosity 3=11780
 freezing on addition of electrolytes, expt. investigation 4=2888
 freezing of drops, and electrification 4=23768
 gamma dose distribution, in cylindrical volumes 0=15558
 γ -irradiation, at 4.2°K, H atom free radicals, e.s.r. 2=3791
 gamma-ray absorption 0=7328, 9327
 γ -ray absorption efficiency, effect of multiple scatt. 4=9157
 γ -ray backscattering, 0.2-2.0 MeV 0=7318
 gamma-ray scatt., ang. and energy distrib. 3=14936
 γ -ray absorption 2=5599
 γ -ray attenuation, mass coeff. 2=4431
 γ -ray distribution, from monodirectional source 2=13758
 γ -ray scattering, energy distrib. 3=10076
 gaseous diffusion in O_2 , at high temp. 0=3563
 and glycerine mixtures, viscosity meas. 0=14575
 heat capacity at high temp. and press. 1=18395
 heat of ionization at 25°C, calorimetric study 4=8198
 heat of ionization from calorimetric meas. 4=8199
 heat loss from non-boiling water, at high heat fluxes 0=6979
 heat pipe, use as working fluid 4=27349
 heat transfer, from fine Pt wires, effect of ionic currents 4=8200
 heat transfer by free convection, up to near-critical condition 4=5413
 heat of vaporization, meas. instrument 1=16172
 heating by sun 0=19500
 heavy, D_2O det., float method theory 2=19183
 heavy, density meas. 2=4998
 heavy, isotopic analysis 1=4915
 heavy-light water mixtures, phase contrast refractometry 0=12471
 heavy, neutron moderation, pulsed source 4=25113
 heavy, scattering of slow neutrons 3=9445-6
 heavy, specific volume at high temp. and press. 4=2657
 heavy, viscosity 2=4999
 heavy, viscosity, temp. variation 4=29615
 heavy-water manufacture, Sweden 3=4688
 heavy water, molecular u.v. absorption spectrum 3=8276
 heavy water prep. by gaseous diffusion, use of fine-pored Ag membranes 0=18385
 heavy water prodn. from ammonia distillation 3=8940
 in hydrate crystals, vibration, effect on n.m.r. line splitting, theory 4=23059
 hydrated electron, absorption spectrum 3=6926
 hydration-dehydration of polyelectrolyte solutions 1=15865
 i.r. absorption 0=82
 i.r. absorption of H-bond 1=15882
 i.r. absorption, line broadening 2=14272
 i.r. absorption spectra, 42-2000 μ , natural and heavy water 2=1149
 i.r. scattering indicatrix of mists 4=29236
 i.r. spectra 1=6860
 intensity anomalies in underwater sound fields 1=12938-9
 intermolecular H-bonding, near-i.r. study 4=153
 internal pressure variation, with temp. 2=4981
 ionic solns., H-bonding, near i.r. meas. 4=154
 ionization, field, with W, Pt, Ir tips, mass spectra 4=24598
 ionization potential, higher, using electron impact Foxgun 3=14520
 ionization product change at high pressures 4=10646
 ionization, of solns., by gamma rays, H_2^+ , H_2O^+ struct. and stability 4=10651
 ions, dissociation due to collisions with mols., 3.5-100 keV 4=9783
 ions, mobility, in O_2 - H_2O mixtures 3=12080
 isotope contents of various samples 0=17680

Water—contd

isotope enrichment by slow evaporation, rate variation with sample origin 0=17681
 isotope separation factors 1=12268
 jet in air, mech. vibr. effect on break-up 4=21084
 jets, high-speed break-up 0=8619
 Kerr constant 4=5180
 lake, deep, inland, ambient noise 1=9457
 laser, far i.r., laser stimulated 4=21682
 laser, i.r., vapour pulsed discharge 4=19295
 layer adsorbed on silica gel, proton states, spin-relaxation study 193° to 374°K 4=7731
 light emission from cavitating H₂O 4=11166
 light and heavy, heat of mixing, formation of HDO 0=3306
 light scattering, Brillouin components 0=14847
 in liquid paraffin, changes in rheological props. on ageing 4=10662
 luminescence and Cherenkov radiation, X- and γ -ray excited 0=19158
 luminescence, ultrasonic effects, and cavitation 4=14117
 luminosity due to detonation transmission 3=21379
 on lunar surface, behaviour 1=18034
 magnetic susceptibility, protons contrib. 3=23907
 microbubble persistence 1=12856
 microwave discharges, OH radical production 2=6232
 microwave pulse absorption, dissociation 2=6882
 microwave spectrum, HDO and D₂O, h.f.s. 0=20667
 mists, stabilization by insoluble monolayers 1=11631
 model, rel. to sound absorpt. 4=14159
 as moderator, neutron spectra meas. 0=7657
 moisture content in wool, direct-reading balances 1=21154
 mol. structure det. from moments of inertia 3=2597
 molec. dissociation, rel. to OH($^2\Sigma^+$) momentum distrib. and emission spectrum 4=30485
 molecular excitation by γ -irradiation 4=5196
 molecular, $1s\pi s^1$ state, molecular orbital calc. 3=22561
 molecular stream, electronic excitation 2=8138
 molecular structure 0=5983
 molecular vibrations, in crystals 2=14681
 molecule, angular correlation diagrams, detailed numerical calcs. 4=6556
 molecule, far-u.v. spectrum 2=14284
 molecule, force field model 2=14243
 molecule, H-bonded in crystals, structure 2=15038
 molecule in inert gas lattice, rotation and ortho-para conversion 4=1275
 molecule, isotopically substituted, vibrational analysis 4=12433
 molecule, pure rotational lines map 2=17619
 molecule, SCF MO one-centre basis set 4=20048
 molecule, spectral line widths from collisions with H₂O and O₂ 4=22439
 molecule, valence vibration freq. rel. to H-bond energy 4=22384
 molecules, adsorbed on alumina, proton spin—lattice relaxation time 4=7342
 molecules adsorbed on crystals, hygroscopic, librations 4=22828
 molecules, in crystals, flip motion, n.m.r. 3=23268
 molecules, electron density distribution 3=12843
 molecules, force consts. and internuc. distances, one-centre calc. 3=22564
 molecules, ortho and para, trapped in solid A and Xe, near-i.r. absorption 0=15722
 molecules, u.v. absorption spectrum 3=8276
 molecules, vibr., in natrolite, l.f., from neutron scatt. spectra 4=4565
 molecules, and D₂O, force consts. and i.r. spectra, calc. 4=6596
 Mollier diagram, transformation for enthalpy—composition diagram 4=8531
 motion from expanding cylinder 3=107
 movement in porous materials 3=11819
 mutual potential energy of molecules periodic discontinuities 1=4324
 N.M.R. natural line width det. 1=12024
 n.m.r., nuclear spin state 2=14847
 n.m.r., p, temp. var. 4=8224
 n.m.r. of proton complexes at -75°C 1=11767
 n.m.r. signal, effect of liquid velocity 2=13354
 n.m.r., study O¹⁷ relaxation 2=19581

Water—contd

n.m.r., in zeolite, calc. 3=11126
 natural in hydrologic cycle, D content variation. 3=25898
 near i.r. absorpt., 27°-209°C 4=21137
 neutron age in 0=12982
 neutron age in D₂O—H₂O mixtures 0=12984
 neutron age to In resonance, from D(d, n)He³ reaction 0=12986
 neutron age, to In resonance, from Na—Be source 1=16802
 neutron age in, for Po—Be neutrons 4=6069
 neutron age in, from Pu—Be 0=15362
 neutron ang. and energy distrib. at graphite bdy. 4=27860
 neutron attenuation, in iron—water shields, calc. 2=20712
 neutron backscattering from reflectors, Monte Carlo calc. 4=21860
 neutron diffusion, asymptotic spectra 1=19207
 neutron diffusion hardening, det. 3=6016
 neutron diffusion length, 16°-89°C 2=5665
 neutron diffusion length, 20-50°C 2=20351
 neutron diffusion, 0, 20°C 3=6017
 neutron diffusion, 0°- -80° C meas. 3=4401
 neutron diffusion parameters 4=21868
 neutron diffusion parameters of heavy H₂O, meas. 4=6063
 neutron diffusion parameters, meas. 2=7860
 neutron diffusion, poisoned, var. with poisoning, Cd, B 3=22141
 neutron diffusion, thermal neutrons 2=3347-9
 neutron inelastic scattering study, 25°-75°C 3=127
 neutron moderation, lifetimes to Cd and Ga cut-off energies 4=27863
 neutron moderation, pulsed source 4=25113
 neutron reflection, angular and spectral distrib. 0=7366
 neutron rethermalization 4=3739
 neutron scattering 0=12940, 15360
 neutron scattering, approx. empirical formula 2=18119
 neutron scattering, dose albedo 0=12944
 neutron scattering in, energy distrib. 4=16092
 neutron scattering, fast, calc. 2=18116
 neutron scatt., hindered rotation theory 3=17284
 neutron scattering, lattice model 2=22527
 neutron scattering law, expt. in H₂O and D₂O 2=22526
 neutron scattering, low quantum transitions 1=11158
 neutron scattering by molecule 1=19625
 neutron scatt., at 0.005 eV, inelastic cross-section 0=6795
 neutron scattering, 0.2-2.7 $\times 10^{-3}$ eV, - 100° to + 200° C 1=13429
 neutron scattering, slow 2=3346, 20346
 neutron scatt, small-energy rotational transitions 3=23869
 neutron slowing-down and thermalization time 4=30234
 neutron slowing-down time, meas. 0=12977
 neutron slowing-down time, meas. method 2=7867
 neutron spectra 2=5648
 neutron thermalization parameters, meas. method 4=21877
 neutron transmission, 0.5-14 MeV, var. thicknesses, calc. 4=6070
 neutron transport in water and heavy water 3=2272
 neutrons, fast, scattering 3=7865
 neutrons, Fermi age in light water, calc. 1=16804
 neutrons scattering 1=16798
 neutrons from U²³⁵ fission, age 2=18127
 neutrons, U²³³ fission, age in water 1=17205
 noise, acoustic, falling 3=21503
 noise production, in turbulent boundary layer 0=2216
 normal and deuterated isotopes molecular beam, electronic excitation 4=1325
 nuclear spin—lattice relax., quasicryst. models 4=2713
 in nuclear reactors, fission, radiolysis 3=15265
 nuclear relaxation times, effect of C particles 2=5030
 nucleate boiling, under reduced pressure 0=14891
 ocean—atmosphere exchange, Antarctic 3=9027
 optical and r.f. props. 0=8665-6
 in organic solvents, proton exchange rates and H-bonding 3=9449
 oxidation to H₂O₂ by X-rays 1=15360
 partial structure 1=10497
 Pauling's model, rel. to thermodynamic props. 1=4326
 pendent drop, equilibrium theory 1=15825
 percolation through ion-exchange resins 0=12067

Water—contd

phase composition, water—vapour, in heated pipe 4=14456
 phase transformation, adsorbed in porous Vycor glass from expansion 4=10630
 phase transition, ice—water, equation of curve 0=6991
 phenol activity coeffs., calc. 4=4721
 photodissociation, OH rotational states 1=12321
 photoionization and absorption spectra, 600-1000 Å meas. 4=12460
 photoionization, continuous absorpt., and fluorescence 4=25690
 photolysis, vac. u.v. 2=4550
 photoneutron emission 2=18317
 planet, Mars, atmosphere, vapour, particle layers 3=18603
 polarization, atomic, calc. 2=8074
 polarized, pulse discharges 2=9540
 polarons in aqueous media, optical absorption, effective mass and radius 4=5209
 positron annihilation, ext. mag. field effect 2=13776
 positron annihilation in 0=9343
 positronium decay, mag. quenching, meas. 4=21844
 preadsorbed on powdered substrates, surface area 4=23548
 pressure pulse meas., damping due to viscous dissipation 0=4993
 proton conductance, anomalous, dipole rotation mechanism 0=4720
 proton conductance, theory 0=4721-2
 proton hydration enthalpy 3=21337
 proton magnetic resonance, in zeolites 3=5452
 proton resonance, elec. field effects, calc. 2=19583
 proton transfer study by n.m.r. 1=4360
 quasi-crystalline model 2=1135
 radar reflection from ice—water mixture 4=8951
 radial distribution analysis, by diff. 2=17438
 radiation chemistry 0=4730
 radiation chemistry, pulsed electron beam 2=6894
 radiation nucleation of bubbles 3=23864
 radiation protection properties 2=20357
 radiolysis of aq. solns. lightly enriched in O¹⁸ 1=6577
 radiolysis, by γ -rays and neutrons in reactor 2=8930
 radiolysis, light and heavy water 0=18438
 rain, Cl³⁶ radioactivity 1=13681
 rain water, Be⁷, P³², S³⁵ radioisotope concentrations 1=13680
 rainwater, Sr⁹⁰ determination, Mexican samples 4=25347
 Raman spectrum, dissolved alkali halides, effect 2=5021
 Raman spectrum, effect of dissolved SO₂, CO₂ 4=14169
 Raman spectrum, effect of electrolytes 2=5022
 reaction with NaCl faces 2=4400
 as reactor moderator, rel. to critical conditions 2=8023
 in reactor, primary circuit, behaviour 2=6059
 refractive index meas. 1=16065
 refractive index meas. 1=18577
 refractive index, temp. var. discontinuities, as for viscous flow 4=21125
 resistivity of pure H₂O and OH⁻ mobility determ. 4=24238
 in rhyolite glass, 350° to 850°C 4=11189
 ripples, damping out by cetyl alcohol films 0=12411
 rotational kinetic effect 0=8648
 rough surface refl. of microwaves, power 4=24833
 salt water—fresh water interface, flow and stress 0=8609
 "saturated", sound velocity 2=5010
 scattering of γ -rays, interpolated energy distrib. 4=27824
 sea-water distillation using fast reactor 3=19902
 self-diffusion coeff. 0=3513
 self-diffusion, from cold-neutron quasi-elastic scatt. 1=9386
 self-dissociation and protonic charge transport 0=7738
 shallow lake, acoustic interference versus freq. meas. 1=12944
 shallow, sound velocity variations 0=5083
 shallow water sound field, integral solution 1=5326
 shielding against high-energy neutrons 2=7868
 shock-front thickness, from acoustic spectrum 4=5290
 slow-neutron scatt., cross-section calc. 0=12941
 in soil meas. by neutron probe, calibration curve and configuration 4=7807
 solubility of inert gases 3=23877
 solubility of O₂, Ar and N₂ in distilled water 4=11184

Water—contd

solubility of O₂ and N₂, isotope effect 3=9450
 solutions in organic substances, i.r. absorption spectra, n.m.r. comparative study 0=16719
 sonoluminescence spectrum 4=193
 sonoluminescence spectrum, effect of dissolved A, He, O₂, N₂ 1=4345-6
 sorbed on Ca hydrosilicate, state investig. by n.m.r. 3=11127
 sorbed on cellulose, NMR study 1=11602
 sorbed on zeolite, i.r. study 0=10376
 sorption by cellulose, effect on dielec. dispersion 2=6514
 sound cavitation, U salts effects 3=18794
 sound intensity meas. by thermoelectric probe 4=2796-7
 sound propag., normal-mode, in layer over absorbing bottom 4=10693
 sound propagation, at l.f., in shallow reservoir 0=19268
 sound speed, free field 4=29624
 sound transmission, effect of cavitation 1=11812
 sound velocity, anomalous temp. dependence 1=15866
 sound velocity, as function of temp. and press. 0=19273
 sound velocity measurement, up to 300°C and 150 kg/cm² pressure 0=19274
 sparks, elec., channel broadening and shock 1=5430
 specific gravity, direct reading hydrostatic balance 0=8594
 specific heat, const. press. on saturation curve 3=11192
 specific heat, vapour and liquid, supercritical range, var. P, V, T 4=14467
 specific heat, water with water vapour 2=13485
 spectra, liquid and vapour, i.r., mol. aggregation differences 4=21138
 spectra ~ 8000 cm⁻¹, rel. to combination vibrations 4=21139
 spectra ~ 8000 cm⁻¹, rel. to H-bonded polymers 4=21140
 spectrum, i.r., H₂O, HDO, D₂O 4=11199
 spectrum, Landé factor and electric dipole moment sign 3=22562
 spectrum, 6. μ band, band model appl. 4=25602
 spectrum, 2. 7 μ bands, calc. 4=30447-8
 spectrum, OH, OD, C² Σ ⁻-X² Π ₁, 1770-1900 Å 4=30439
 spheres, i.r. absorpt. and scatt. cross-section 2=11502
 and steam mixtures, density meas. 0=10806
 structure, electron diff. exam. 4=2650
 structure in interlayers in layer silicates, from n. m. r. obs. 4=10347
 structure, light scattering obs. 4=29609
 structure, model for thermodynamic props. 2=17443-4
 structure, Raman spectral studies 4=21093
 structure, at room-temperature 3=9444
 structure and sound velocity, effect of press. 0=10657
 structure, theory 1=11749
 structure, theory 1=12864
 structure theory, significant 4=16090
 structure, theory and X-ray data 4=21092
 supercooled, nucleation 0=8153
 supercooled, viscosity meas. to -23.8°C 4=5162
 supercooling, by dispersion as emulsion, small volumes 3=16837
 supercooling, effect of solutes, rel. to structure 4=157
 supercooling, enhancement by dissolved substances, filtering effects 4=5456
 supersaturated vapour, growth of small ions 3=21712
 supersonic flow in tubes, wall friction meas. from temp. rise 0=12404
 surface boiling under free convection in subcooled H₂O, heat transfer 4=27380
 surface gravity waves, model 3=16595
 surface, molec. orientation 2=5001
 surface structure 3=21307
 surface structure, criticism 3=14139
 surface, temp. in evaporation study 2=22095
 surface tension, effect of N₂ and Ar, 1-120 atm 3=18795
 surface tension calc., 0° to 340°C 4=10595
 surface tension, dynamic properties, h.f. standing capillary waves 1=130
 surface tension, effects of rotation, temp. depend. 0=73
 surface tension, meas. by drop-weight method, viscosity effect 0=19082
 surface tension meas., interfacial, hydrophobic ring use 4=14128
 surface tension, rotational kinetic effect 0=8640
 surface tension, theory 1=15818
 surface velocity in winds, wave-damping 4=18154

Water—contd

surfaces, wind-induced stresses 4=8155
 synthesis, radiation induced, energy transfer from
 CO_2 4=23678
 in synthetic substances, n.m.r. 3=6768
 system with ethyl acetate, vapour-liq. curves 2=19785
 tensile strength 1=11771
 thermal conductivity, anomaly 0=19121
 thermal conductivity, 25°C 2=15571
 thermal expansion temp. var. discontinuities, as for
 viscous flow 4=21124
 thermal neutron diffusion 1=13445
 thermal neutron diffusion length, 25-296°C 1=16801
 thermodynamic props., comparison with 6 electro-
 lytes 4=21126
 thermomagnetic effects 0=6785
 transverse relaxation time meas. by spin-echo
 technique 1=1756
 triple point, temp.—time dependence 0=1056
 tritiated, occlusion and absorption on Ta films 4=7730
 tritiated, separation factor in fractional
 distillation 1=2306
 u.s. absorption 2=15707
 u.s. absorpt. at 5, 0, 11.6 and 12.9 Mc/s 4=24209
 u.s. absorption, meas. by radiation pressure
 method 3=21361
 u.s. cavitation, by cosmic-ray neutrons, model 4=21080
 u.s. cavitation, spectral indication of its origin 4=5143
 u.s. propagation, 15-80°C 0=14757
 u.s. propagation, nonlinearity parameter 2=9275
 u.s. propagation, effect of vapour bubbles 2=11453
 u.s. velocity, along saturation line 2=1145, 7209
 u.s. velocity, effect of diffr., interferometric
 meas. 4=21131
 u.s. velocity and latent heat of vaporization
 relationship 0=16768
 ultrasonic absorption, with plankton in
 suspension 4=4747
 ultrasonic propag., temp. depend., up to
 b.p. 1=8118
 ultrasonic variable delay line 0=14727
 ultrasonic waveform distortion at finite amplitude
 det. of nonlinear parameters 1=4337
 underwater sound reflection 0=8751
 vaporization, forced, at 25°C 0=14908
 vaporization, forced, thermodynamics 0=3694
 vapour, absorpt. bands 125°-200°C 3=15348
 vapour, adsorption in graphite 3=13569
 vapour, adiab. expansion and ice-crystal form. 0=5212
 vapour, adsorption on AgI 4=23606
 vapour, adsorption on charcoal, study using sorption
 balance and extensometer 4=10617
 vapour, adsorpt. on Ge, kinetics 4=20362
 vapour, adsorption on insoluble metal halides 3=1381
 vapour, adsorption on porous glass 2=15101
 vapour, afterglow discharge, microwave study 0=5294
 vapour, in atmosphere, 15-20km, abundance detm. 3=9020
 vapour, atmospheric, satellite meas. 2=6910
 vapour, atmospheric, solar rad. absorpt. 2=17143
 vapour, atmospheric spectrum, vibr. and vibr.-
 rot. 2=2509
 vapour, in cloudless atmosph., sunlight
 absorpt. 2=2482
 vapour, condensation on Au substrate 3=21635
 vapour, condensation by nucleation in nozzles 4=14462
 vapour, desorbed from satellite, ionization
 mechanism 2=9130
 vapour, dissociative electron capture, cross-
 section 1=13065
 vapour distribution in stratosphere above 90000 ft. 1=15226
 vapour, effect on adsorption of O_2 on Ge 0=16395
 vapour, effect of CdS photocond. 0=9992
 vapour, effect on sintering of MgO 4=23546
 vapour, effect on thermal cond. of $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$ 1=14192
 vapour effects on surface props. of Ge and Si 4=20795
 vapour, effect on Al_2O_3 fracture strength 4=28935
 vapour, electron attachment coeff. 0=5277
 vapour-ethylene mixtures, electron trapping 2=22170
 vapour, flow in U-tubes during vaporization 1=4512
 vapour fluorescence, possibility 3=9513
 vapour, Ge transistors in, effect on parameters 2=6481
 vapour glow discharges, ion forms 3=7480
 vapour, h.f. resistance 3=9515

Water—contd

vapour, and H_2O vapour and H_2 mixture, drift velocities of
 electrons 4=8624
 vapour, i.r. absorption, 50-350 μ 0=6927
 vapour, i.r. attenuation 0=1967
 vapour, i.r. emissivity 1=15960
 vapour, i.r. spectra, rel. to adsorption on cell wall and
 N_2 addition 4=5247
 vapour, i.r. transmittance 4=11248
 vapour, interaction with low-energy electrons 3=16902
 vapour, ionization and breakdown 1=1891
 vapour, ionization and elec. breakdown 0=14961
 vapour, ion-pair formation, by 100-300 kV
 X-rays 2=7560
 vapour, mixture with H_2 , viscosity at 295°K 0=16721
 vapour, + N_2 , chemical reactions due to d.c. electric
 discharges 4=18758
 vapour, near i.r. absorption bands 0=14302
 vapour, non-isothermal diffusion 3=11820
 vapour, non-steady-state nucleation 2=13486
 vapour, nucleation theory, emendations 3=14426
 vapour and O_2 mixtures, sound absorption 4=21185
 vapour, precip. of droplets of ice 2=1313
 vapour, r.f. absorption 0=12717
 vapour, rotation line widths and strengths 4=9750
 vapour, rotational spectrum 0=4200
 vapour, slow-electron drift vel., 77-443°K 2=19900
 vapour, sound absorption, freq./press. depend. 1=8186
 vapour, sound absorpt. and vel., 100° and 250°C 4=27220
 vapour, spectral emissivities and integrated intensities
 of 1.87, 1.38 and 1.14 μ bands, 1000°-2200°K 4=28219
 vapour spectrum, far i.r. 1=18596
 vapour, spectrum, 166-600 cm^{-1} , spectrometer
 calibration 2=17617
 vapour, strength of ν_3 vib. 3=15347
 vapour, supersaturated, droplet formation 1=6849
 vapour, thermodynamic props. at high temps. 4=16147
 vapour, total absorptance in near i.r. 3=23933
 vapour, Townsend discharge, photon absorption 3=4029
 vapour, transmission functions for pure
 rotation band 1=831
 vapour, transmittance over stratospheric slant
 paths 4=23777
 vapour, tritiated, diffusion in silica glass 4=4078
 vapour, 2.7 μ band, spectral emissivities and integrated
 intensities, 530°-2200°K 4=12483
 vapour, u.s. absorpt., relaxation time 3=18857
 vapour, ultrasonic absorption, relaxation time 4=5245
 vapour, viscosity 0=16723
 vibration spectra of d and t substit. products 4=15347
 vibrational properties, liquid and solid 2=10321
 viscosity, absolute 3=11761
 viscosity, effect of dissolved air 1=9367
 viscosity, high temp. and press. 2=21876
 viscosity, rel. to pressure and temp. 4=133
 viscosity, step structure in intermolecular activation
 energy 1=15780
 vortex, tornado model, carbonated water 4=10705
 water-dioxane system, light scatt. 2=13345
 water-glycine-KCl, diffusion parameters 3=1681
 water-methanol solution, ultrasonic-wave velocity, rel.
 to cavitation 0=19129
 water-oil interfaces, oil drop coalescence 0=14610
 water vapour i.r. bands 1=6590
 water vapour, in M-type stars 3=11574
 water vapour, transmission spectrum, 2.7 μ region 4=3881
 wave damping by monomol. films 3=5423
 wave dimples in capillary-gravity region 1=15810
 wave profiles 0=8634
 wave scattering, initial, by inhomogeneous medium 3=7272
 waves breaking at angle with shore line, theory 1=15813
 waves, diffraction by cylinders 0=8633
 waves, dispersion 3=23851
 waves, dissipation 4=16083-4
 waves, Hamiltonian method 3=23580
 waves, shallow, profile and velocity components 3=7188
 X-ray scattering 0=7330
 X-ray scattering by slab, spectra and total flux
 meas. 1=19171
 X-ray study 1=11748
 X-rays and electrons scattered, intensities calc. using
 two methods 4=6522

Water—contd

- zeolitic, spin-lattice relaxation time 3=21415
 Ar solubility, heat and entropy 4=159
 in $\text{Ba}(\text{ClO}_3)_2 \cdot \text{H}_2\text{O}$, vibration, effect on n.m.r. line splitting, theory and expt. 4=23059
 with Ce ions, vol. mag. susceptibility meas. 4=8888
 CO_2 absorption, in flow along surface 2=9267
 CO_2 - H_2O system, in turbulent motion, mass transfer, conc. effect 3=16152
 CO_2 - H_2O , two phase region, up to 3500 bar 4=8508
 D determination, from i.r. absorpt. spectrum 2=12302
 D_2O , analysis by i.r. spectrometry 2=10997
 D_2O , concn. meas., falling drops method 2=11231
 D_2O detection in H_2O , i.r. analysis 3=23561
 D_2O , dissociative electron capture cross-sections, swarm meas. 4=25753
 D_2O , nuclear quad. relax. of D, meas. 4=8225
 D_2O , spectral shifts of transition metal ions and complexes in soln. 0=3531
 D_2O , speed of sound variation with temp. and pressure 1=5329
 D_2O , thermodynamic props., statistical model 4=24200
 D_2O vapour, ultrasonic attenuation and velocity 4=14214
 D_2O^{18} , liquid, density, thermal expansion up to $\sim 80^\circ\text{C}$, melting point 3=14144
 D_2O - H_2O vapour press. and composition 4=24450
 Fe^{2+} , Fe^{3+} , soln., electron transfer between ions, theory 3=14178
 H bond covalency 0=8662
 HDO, h.f.s. of microwave spectra 4=9733
 HDO, proton resonance, spin-spin coupling const. 2=16558
 H_2O -acetylene, deuterium exchange equil. 4=30894
 $(\text{H}_2\text{O})_4$ cubic complex properties 3=23868
 H_2O -dioxane and heavy water-dioxane, rel. to dielectric behaviour, rel. to molec. structure 4=18211
 H_2O -formic acid mixture, u.s. velocity and absorption 4=27174
 H_2O -gelatine, n. m. r. relaxation time rel. to adsorption 4=28263
 H_2O -silica gel, n. m. r. relaxation time rel. to adsorption 4=28263
 H_2O^{18} , liquid, density, thermal expansion up to $\sim 80^\circ\text{C}$, melting point 3=14144
 H_2O - $\text{C}_2\text{H}_5\text{OH}$ mixtures, u.s. relaxation 2=53
 H_2O - D_2O mixtures, mutual diffusion 1=2752
 H_2O and D_2O molecules, catalysis of vibr. energy transfer in collisions 2=23015
 H_2O - D_2O , proton mag. relax. temp. var., mechanisms 4=21158
 H_2O + D_2O , thermodynamics of mixing 4=29204
 H_2O -Hg-benzene system, contact angles, interfacial tensions 4=144
 H_2O_2 - H_2O and D_2O_2 - D_2O solutions, glass formation 1=6551
 H_2O^{16} - H_2O^{17} system, relative volatilities 2=19783
 N_2 solubility, heat and entropy 4=159
 O_2 solubility, heat and entropy 4=159
 T-activity measurement 4=15180

 axially symm., plane boundary conditions 3=18702
 bending, propagation in plates 1=2805
 bending waves, radiation from vibrating plates 0=19283
 blast waves in spherical, cylindrical and plane shocks 1=12911

Waves—contd

- book 1=6806
 Bose hard-sphere system at very low temps. 1=5223
 branching processes, invariant imbedding 2=9
 Cauchy's problem, solution for plane waves 0=10595
 Cauchy's problem, wave eqn. soln. 0=822
 characteristic, of a uniform plane impedance surface 4=5017
 circumferential, in thin-walled air-filled cylinders in water 3=7271
 classification, kinds of wave motion 2=2598
 in compressed-air ducts 1=9412
 compression, amplification in combustion 1=18665
 compressional, rel. to petrol and benzene flame propag. in air 0=14895
 compressional, velocity in marine sand 0=2200
 coupling mode amplitudes, correl. with quantum operators 2=17337
 crystallization waves in supercooled phosphorus 3=9658
 in cylinder walls, hollow, elastic 1=1777
 cylindrical, reciprocity parameter 1=6927
 cylindrical wave in viscoelastic solid 3=1748
 deflagration, plane, stability 0=8850
 diffraction image on focusing, correl. 3=16495
 diffraction by smooth transparent object, geom. theory 4=18033
 diffraction, by transparent wedge 3=14001
 dilational, in viscoelastic solids, propagation 1=20337
 electric breakdown wave propag. in gases, theory 3=1956
 electrohydrodynamic, at fluid-fluid interface 3=475
 electrons, velocity modulation 3=16981
 equation with nonlinear interface condition, periodic soln. 1=15170
 equation solution in terms of hyperspherical harmonics 4=5024
 equations, expansion in terms of Bessel functions 2=1060
 expansion coeff. of wave fronts in continuum mech. 4=21021
 field-wave problems, use of conformal mapping, survey 4=5018
 finite disturbances, propag. in relaxing medium 2=21943
 flexural, finite-amplitude, in rod, constancy of profile 1=2807
 flexure, surface, refraction 2=21963
 fluctuating, scattering by large objects 3=18703
 fluctuating signal, mean and median values, rel. to calc. method 4=14023
 fluid, gravity waves due to explosion 1=18380
 fluid, effect on particle oscillations 2=13317
 in fluid, in radiation field 1=1733
 fluid, viscous, uniformly deep rotating layer 2=19526
 fluids, rotating, energy transfer by wave reflection 3=11758
 fluids, stratified, including gravity and rotation effects 3=21295
 formation in Prandtl-Meyer flow 1=6841
 free boundary problem, for wave eqn. 2=2676
 gas mixture, energy content of components 2=11419
 gases, viscous and heat conducting, wave-front velo. 4=8233
 generalized "cross-correl." field quantities 3=21203
 gravitational, exact, spherical 1=15647
 gravitational, null and type III, propagation laws 0=2100
 gravitational, plane-fronted 1=8042
 gravitational, Rumers' invariant theory 4=29519
 gravity, in flow of stratified fluids 4=29599
 gravity, standing axisymmetric, on water, period 3=11376
 Hamilton-Jacobi eqn., rel. to de Broglie waves in space-time 4=14024
 Hamiltonian method 3=23580
 Huygens' principle, generalization, and scanning operators 2=21786
 Huygens' principle, interpretation, appl. to acoustic, elastic and e.m. waves 0=11048
 Huyghen's principle, relationships with propagation, isotropic medium 3=16496
 hydromagnetic, in conducting sheet in mag. field 1=1967
 hydromagnetic waves due to upper atmospheric nuclear explosions 1=6658
 hydromagnetic, waves in inhomog. fields of constant direction 3=17034
 hyperspherical harmonic equation solns. and tensors 4=21016

Waves—contd

- inhomogeneous media, radiation forces and wave momentum 4=8025
- inhomogeneous medium, propagation with shadow formation 2=1048, 7110
- inhomogeneous medium, transit time fluctuations 2=19380
- interior and boundary value problems 3=22
- Kirchoff's theorem generalization for arbitrarily moving surface 4=11030
- Kramers-Kronig relations and gravity waves 4=5019
- liquid layer between elastic half spaces, e.f. 3=23960
- Lissajous figures, demonstration 4=8003
- long, one-dim. propag. theory 3=14023
- magnetic field effects on surface waves, var. with liquid depth 4=3119
- m. h. d., propag. in cylindrical pipes 4=19181
- magnetohydrodynamic, of finite amplitude 3=5828
- magnetohydrodynamic, in primeval nebula, ang. momentum transfer 0=292
- m. h. d., propag. into region at rest 4=8909
- m. h. d. reflection at boundary between anisotropic plasmas 4=14646
- magnetohydrodynamic, two-dimensional 1=16535-6
- magnetohydrodynamic, in waveguides 0=1200
- matter waves, total reflection, associated transverse shift 1=6924
- mechanical impedances, measurement 0=19249
- momentum and energy 2=1043
- monochromatic, in general relativity 2=9164
- multiple scattering 1=10571

- ultra-relativistic waves, propagation theory 2=7233
- unloading, theory 3=18887
- in upper atmosphere, internal gravity waves 1=1529
- velocity transformers, resonant 4=5272
- wakes behind cylinders 0=19071
- water, dispersion 3=23851
- water, shallow, profile and velocity components 3=7188
- water surface, rel. to acoustic propagation in plane layer 1=9448
- water surface, gravity, model 3=16595
- water waves height meas. 3=14084
- wave eqn., approx. soln. 3=21195
- wave eqn., ergodic theorem 1=16047
- wave equation, Kirchhoff formula, generalization for moving surface 4=20
- waveform, finite-amplitude, from hydrodynamics eqns. 2=9248
- wave function assignment to squares of abs. values, Fourier theory 4=5020
- and wavegroups, various props. 2=4917
- wavelength, non-dissipative and dissipative media 0=5077
- wave motion with strong discontinuity, appl. of Laplace transforms 4=24023
- wave-type solution, of nonlinear parabolic differential eqn. 0=14364
- waves breaking at angle with shore line, theory 1=15813
- H₂O, Hamiltonian method 3=23580

Waxes

- beeswax electret, polarity reversal problem 4=10117
- carnauba electrets 0=6159
- carnauba electrets, dipole moment and discharge current 4=12972
- carnauba, electrets, radiation effects 4=1668
- carnauba, ouricuri, American montan, dielec. props., -60° to +90°C, var. freq. 0=18089
- carnauba, production of electret state 3=17947
- conductivity, elec., var. with temp., voltage, near melting 4=1658
- electrets, decay 0=5261
- electrets, heterocharge, ionic space-charge layers 0=18106
- electrets, remanent polarization 2=8471, 10565
- p.m.r. in liquid and solid meas. 4=24250
- paraffin, electret effects meas. 3=8566
- paraffin, electroluminescence 4=22938
- paraffin wax-water wetting hysteresis 0=14615

Wear**(Heading introduced in 1962)**

- abrasion resistance, similarity effects 2=19020, 23797
- alloys, high temp., decrease due to oxide layer 3=20764

Wear—contd

- α -brass, frictional, and crystal plane orientation 4=13393
- brittle crystals, abrasion, friction rel. to wear 3=11188
- carbon brush materials 3=20761
- diamond on diamond in high vacuum 4=23152
- elastic deformation effects, in surface friction 2=4351, 12872
- electrographite 3=8787
- electrographitic brushes, influence of sliding conditions 2=21451
- graphite, on metals mechanism 3=6806
- graphite, on steel, effect of current, mechanism 3=6805
- initial rel. to stationary effect in vacuum 3=18220
- ionic crystals, "friction damage" 3=11189
- machine, on electron microscope 3=20762
- measurement using radioisotopes, review 3=1248
- metallic, mild-severe transition, surface films 3=16011
- metals, abrasion, groove volume proportion removed 2=8758
- metals, cavitation attack, initial phases 2=19018
- metals, during abrasion, different behaviour of hexagonal and cubic 4=13387
- n. t. f. e. on glass 4=23199
- physical aspects, review 2=23796
- reduction, by polar group adsorpt. 2=19019
- sapphire, sliding on steel 2=21452
- sapphire on steel, erratum 3=11191
- speed effects, bet. similar metals due to non-uniform temps. 4=23113
- steel, case-hardened, heat treated 3=1247
- steel, cavitation attack, initial phases 2=19018
- steel, mild, role of oxidation 2=4349
- study by ultra-high vacuum techniques 4=20639
- surface resistance, for sliding friction 2=14912
- Bi, abrasive wear, effect of brittle fracture 3=13386
- Cu films 2=19021
- Cu, frictional, and crystal plane orientation 4=13393
- Cu, under sliding Cu stylus 4=15706
- Ni, plastically deformed, abrasive wear 4=7438
- Sb, abrasive wear, effect of brittle fracture 3=13386
- WC, sintered material 3=3247

Weather

- See also Meteorology.

- recording calorimeter 0=7009
- rutile in n-butyl chloride 2=17426
- spreading coeff. meas. 0=5003
- and surface tension and contact angle 4=18167

Wetting—contd

- Al, powder, by hydrocarbons, in solution 3=16131
- Ge, by molten In 4=4655
- Ge, by In, and Ge surface energies, var. planes 4=13672
- Ge, with In and In alloys 0=14066
- by H_2 , liquid, of var. structural solids 4=11170
- Hg 1=15819-20
- Ni, by included Pb, dihedral angle, effect of stress 4=23533

Wind

- airflow on windward side of ridge 3=9028
- air layer close to earth, profile under unstable equilibrium conditions 4=29275
- airstream, stratified, over a ridge, lee waves 1=18450
- anemometer, standard cup contact 4=30926
- in atmosphere, truncation errors 3=1432
- barotropic zonal currents, dynamic instability 3=6955
- causing stresses on water surfaces 4=8155
- in clouds, C6 cells, up and down, by radiosonde balloon 3=13673
- cold air mass spilling over mountain ridge 3=9032
- currents, confluent and diffluent, theory 4=23742
- cyclones, tropical, structure and dynamics 4=29276
- diabatic profile, deriv. 2=15189
- diabatic profile, mixing length 0=6822
- E-region winds, Fourier analysis 1=4123
- eddy currents, k.e. variations rel. to jet stream 3=9029
- eddy fluxes, quasi-horizontal, 25-60 km 3=18497
- effect on gravity waves 2=17120
- effect on scattering of sound in atmosphere 1=20875
- effect on velo., acoustic-gravity waves, with wind shear 4=10732
- exponential profile 4=23743
- generating wave motion, spectra, analysis 4=13777
- geostrophic motion, in equatorial stratosphere 2=21628
- gravity-wave dispersion under wind shear, two model atmospheres 4=2189
- hurricane model, vortex flow normal to a flat surface 4=8141
- hurricane, steady-state, rel. to thermal structure. 3=25881
- hurricanes, forces and radial accel. 3=5199
- hurricanes, water distribution 3=25882
- indirect probing techniques using radar 3=5188
- ionosphere, E-region 0=18492
- ionosphere, F-region 0=14240
- ionosphere, meas. utilizing radio-star data 0=21347
- ionosphere, wind systems and drift motions 0=8378
- ionospheric 3=9077
- ionospheric, radar obs. of meteor trails 4=30946
- ionospheric, radio measuring method 3=9076
- irregularities, at 80-100km, radio echoes study 0=8368
- Japanese research 3=11391
- jet stream, subtropical and lower stratosphere winds 2=15190
- jet streams 3=21035
- local, nonlinear theory for turbulent atmosphere 2=19198
- in lower ionosphere, meteor trails study 3=16277
- matter convection in atmosphere 0=12177
- mesosphere, acoustic data deriv. 2=4627
- mesosphere measurements 1=20888
- in mesodecline, meas. 3=9063
- mountain waves, lee-wave eqn. 2=21630
- noise, acoustic, in trees 3=21503
- ocean-wave generation, as stochastic process 2=19191
- ocean waves, crit. height values, calc. 3=18483
- point-discharge current dependence 0=1116-7
- polar ionosphere, velocity 2=19209
- profile near ground, in stable stratification 4=23744
- profile parameters, eval. from speed-height obs. 2=17138
- profile, at 220 k ft. 2=21623
- radar meas. using Doppler effect in rain or snow 3=1433
- scale analysis of turbulence 2=12999
- shear, rise of isolated thermal 3=5198
- shear, in upper-atmos. turbulence 0=4788
- 60 to 110 km, exhaust trail obs. 3=9033
- solar, radar evidence 4=29479
- solar wind and gegenschein 1=10336
- solar wind, terrestrial accretion 1=11651
- spectral statistics, at 500 mb, review 2=17139
- speed rel. to magnetic bay theory 1=21093

Wind—contd

speed variations rel. to ozone content 1=20824
 statistics, for climatological purposes 2=6911
 stratosphere, equatorial, 26-month osc. and sun, u.v. radiation 4=10701
 stratosphere, tropical, double quasi-biennial cycles 4=29274
 stratospheric winds, sudden winter onset 1=20823
 stream function calc. from vertical motion. 3=25879
 and sun, eclipse, fleeting shadows obs., 15 Feb. 1961 4=29299
 and sun, eclipse shadow bands, 15 Feb. 1961 4=29298
 surface stress determination 3=11396
 symmetric waves, in stratified shear layers 2=21629
 thermals, in convection, turbulent interchange effects 4=10706
 thermals, theory and expt. compared 4=2191
 tornado vortex, carbonated water model 4=10705
 tropopause, stellar scintillation meas. 2=2486
 troposphere and stratosphere, diurnal variations 2=17129
 troposphere, upper, at mesoscale freqn. 3=16215
 tropospheric jetcurrent influence on fallout 1=20871
 turbulence spectra over waves, meas. 3=25880
 turbulence, spectra, validity of Taylor's hypothesis and Kolmogoroff's law 4=10707
 turbulence spectrum, effect of sampling and averaging 2=12998
 turbulence, time scale, l.f. errors 4=10710
 turbulence, vertical, 2500 ft., rel. between Lagrangian and Eulerian props. 4=10709
 turbulent transfer, in boundary layer 0=6827
 upper air, and star shadow band motion 4=10708
 upper atm. meas., using Na vapour trail data 4=7877-9
 upper atm., west-to-east, cause 4=29308
 upper atmos., from rocket soundings, formulae 1=10315
 upper atmosphere, effect of winds on rotation of satellite 0=18483
 upper atmosphere, 80 to 115 km, horizontal profile, by pitot-static tube 2=2496
 upper atmosphere, evidence from 195861 satellite 1=9301
 upper atmosphere, meas. April 1961 3=9062
 upper atmosphere, meas., Na, Li clouds, review 4=17916
 upper atmosphere, meteor trail observation 0=14390
 upper atmosphere, night, from chemiluminescence. 3=25918
 upper atmosphere, radio study 0=8367
 upper atmosphere, rocket-grenade meas. 0=14197
 upper atmosphere, semidiurnal tides 2=4624
 upper atmosphere, sodium rocket experiment 0=21331
 upper atmosphere, systematic study 2=2498
 upper atmosphere, twilight 4=13833
 upper atmospheric winds at medium latitudes 1=6605
 upper stratosphere, rel. to lower level movements 3=3458
 variation with height, horizontal position, troposphere 4=17911
 velo., horizontal, 6-12 km, statistics 3=18502
 velocity components, in lowest 300 m of atmosphere 4=4764
 velocity fluctuations, continuous computation 4=17880
 velocity, Kappa rocket meas., Japan 2=4593
 velocity, meas. by impulse register 2=21622
 vertical distribution, rel. to atmos. density 0=6440
 vertical fluctuations, 100-500 ft. 2=21631
 vertical, pulsation spectra, turbulence dissipation 4=15866
 water surface velocity, wave-damping 4=18154
 wind speed variations rel. to ozone content 1=20824
 zonal wind, baroclinic instability 4=17881

 camera for polycrystalline diffuse scattering studies 1=12629
 camera, powder, Debye-Scherrer 3=6943
 camera, powder, high-temp., errors 2=23831
 camera, Rimsky retigraph, mechanism for centring single crystals 1=10246
 camera for structural defect meas. 3=25693
 camera, for up to 270°C 0=16289
 capillaries, thin walled, for pyrophoric single crystal work 4=23406
 cassette attachment for Weissenberg photographs 4=26636
 circular-arc slit, with fixed centre and adjustable radius, for diffraction pattern anal. 1=1351
 collimator using total internal refl. 2=23927
 compression apparatus for powder diffractometry 2=12900
 counter diffractometer 0=8187
 counter diffractometer, equi-inclination, reliability 4=10513
 cryostat and camera, low-temp. 0=3220
 cryostat, liq. N₂ to room temp. 4=353
 cryostat, liquefier-type, for use at liq. H temp. 1=6510
 cryostat for low temp. obs. 4=15780
 cryostat, -190°C, for monocrystals 0=12015
 crystal growing device, for use in cameras 0=8165
 crystal rotator for cryostat 1=9125
 crystal sphere orienter for non-opaque crystals 3=8821
 Debye-Scherrer camera with focussing for linewidth meas. 4=10520
 Debye-Scherrer camera, 19 cm dia., for -150° to +200°C 1=1388
 device for $K\alpha_2$ influence elimination 3=18291
 diffraction camera for large single crystal alignment 1=10245
 diffraction line point-by-point recording, photo-relay mechanism 2=21500
 diffraction meter, for -196° to 600°C 2=21498
 diffraction pattern electronic image-intensification 0=13974
 diffractometer adapter, for existing X-ray unit 1=15031
 diffractometer, adaptation for thin film studies by total X-ray refl. 4=10605
 diffractometer alignment 4=4586
 diffractometer attachment for direct obs. of thin films 3=20812
 diffractometer, automatic 2=232
 diffractometer for automatic crystal setting, theory 2=6795
 diffractometer, automatic digital, system evaluation 4=30838
 diffractometer, automatic, for monocrystals 2=10814
 diffractometer, automatic programmed 2=23835
 diffractometer, automatic, for single crystals, kinematics of the moving elements 0=8177

X-ray crystallography—contd**apparatus—contd**

- diffractometer, automatic, for single crystals, punched-card controlled 2=23836
- diffractometer, automatically recording, for NaCl structure amplitudes 0=18350
- diffractometer, with Bragg-Brentano focusing, sample eccentricity effect 3=25692
- diffractometer, computer-controlled 3=23425
- diffractometer, controlled atmosphere sample chamber 0=21180
- diffractometer, focusing attachment 3=25690
- diffractometer, Geiger 0=4609
- diffractometer, Geiger, for monochromatic radiation 0=8181
- diffractometer, goniometer and X-ray stabilizer details 1=1390
- diffractometer, high-speed, use of soft X-ray scintillation counter 0=13975
- diffractometer, high-temp. 0=4608
- diffractometer, high-temp., automatic recording 2=4404
- diffractometer, for high-temp. studies of metals 3=2067
- diffractometer for low-order-powder reflections 1=15029
- diffractometer monitor system, opposite-window, response to tube condition changes 1=16469
- diffractometer, multiple-anode 1=9123
- diffractometer, Philips, stepping mechanism, adaptation 3=6830
- diffractometer, rapid-scanning, design and performance 0=8179
- diffractometer, single-crystal 2=17001
- diffractometer, with system of slits before detector 0=3193
- diffractometer, triple-crystal, monochromator 2=21511
- diffractometer, two-circle, for diffuse diffraction abs. meas. 3=11245
- diffractometers, analogue and digital single-crystal 4=30837
- diffractometer, automatic 4=23404
- diffractometer, automatic, for polycrystals 4=10516
- diffractometer furnace, temperature controller 4=11396
- diffractometer, linear, adaptation to measure three reflections 4=23405
- diffractometer, liquid He Dewar attachment 4=2906
- diffractometers, in characteristic X-ray absorption meas. 1=11995
- diffractometers, single-crystal, automatic, review 3=8818
- diffractometers, 3 types, faults, comparative study 3=16056
- electron multipliers, for direct viewing of Debye-Scherrer patterns 4=10512
- extinction micrographs of single crystals 3=5094
- for fast exposure 4=29083
- fibres, specimen holder 3=13432
- films, commercial, comparison 4=3081
- filter chopper, for diffraction 2=11590
- fine-focus X-ray tube, conical camera 1=20696
- furnace and mount for single-crystal goniometer 3=18287
- furnace, for Seifert diffractometer 0=3192
- furnace for use with vertical diffractometer 4=10514
- generator, conditions for optimum intensity meas. 4=8881
- goniometer arc automatic correction device 4=4584
- goniometer attachment for high temp. work 1=11552
- goniometer, gimbal 2=21499
- goniometer for orienting single crystals 1=9124
- goniometer, specimen holder 3=13434
- goniometer, 3-circle, geometric props. 3=18288
- goniometer, three-circle, uses 3=1277
- goniometer, twin head, for diffusely reflected X-rays 0=8180
- goniometers, safe universal mounting system 1=20457
- goniostat, full circle, for diffrn. intensity data 3=8822
- graticule, for viewing powder photographs 0=8286
- Guinier camera, vertical, quickly adjustable 1=20454
- high pressure cell 4=28658
- high-temp. attachment for horizontal camera 1=20459
- high-temp. chamber, up to 1100°C 2=17003
- high temperature furnace for use with diffractometer 4=10517
- lattice plane orientation and lattice consts, counting tube technique 4=17802
- low temperature apparatus, 87-380°K 4=23403

X-ray crystallography—contd**apparatus—contd**

- microdensitometer, automatic, recording-type 1=20458
- microdensitometer, integrating video 4=7595
- microfurnace for high temp. observations 4=18471
- microfurnace for single-crystal X-ray camera 3=20813
- monochromators, use of 3=2069
- monochromators, wavelength distrib. at focus, effect on meas. 1=9122
- mosaic spread width, reflection curve 3=13428
- mounting of small oriented crystals, interchangeable axis 2=23838
- Norelco diffractometer, variable bent diffracting device 4=7594
- Philips powder camera, conversion for single-crystal use 3=13431
- photographs, influence of protective paper 0=12014
- polycrystals analysis under high pressure 3=20815
- powder camera attachment for preferred orientation in polycryst. specimens 4=30839
- powder camera, coaxial, modified 1=2531
- powder-camera, high pressure 4=23400
- powder camera, high pressure studies 2=23834
- powder camera, translating device 0=18336
- powder-diffraction apparatus, for high temperatures 0=4607
- powder diffraction cameras, cylindrical, axial divergence profiles 4=23399
- powder diffraction cameras, cylindrical, axial divergence profiles, centroid shifts, variances 4=23398
- powder diffractometers focusing geometry 2=10821
- powder diffractometry, heating and cooling attachments 2=14972
- powder meas., high pressure and temperature 4=10519
- powder pattern indexing, appl. to triclinic crystals 1=20515
- for powder patterns at pressures up to 500k bar 4=10518
- precession camera, with two-circle goniometer 0=3197
- proportional counter recorder 3=23427
- recorder, for URS-251 unit and GUR-2 goniometer 0=16290
- recrystallization rates 0=13945
- rotation chamber, for high pressure studies 1=5094
- sample changer for X-ray analysis 2=868
- scintillation counter apparatus, for recording diffraction patterns 0=12017
- scintillation counters, for single-crystal studies 0=4612
- simultaneous X-ray shadow picture and interference pattern production 1=11604
- single crystal, cooling technique for below 90°K 4=30834
- single crystal diffractometer, simultaneous meas. of multiple reflections 4=13573
- single crystal diffractometers, conference 3=13429
- small-angle, Kratky-type camera 2=14970
- small-angle scattering apparatus using quartz monochromator, linear collimation and Geiger counter 4=10515
- small-angle scattering using quartz monochromator, linear collimation and Geiger counter 4=10515
- specimen holder, humidity, temp. controlled 2=21497
- specimen holder for low temperatures 4=20755
- specimen holder, for powder cameras 0=21181
- specimen-rotating and oscillating device 3=20814
- spectrometer, roller 2=15977
- step drive for diffractometers, use of "Slo-Syn" 1=15032
- for temperature range from liq. He to liq. N₂ 2=19066
- three-circle goniometer 1=6509
- triple crystal diffractometer, theory 1=15030
- for ultra-high pressures 4=15779
- universal mount 2=1614
- vacuum furnace 0=8185
- wavelength meas., effect of counting efficiency variations 2=5428
- Weissenberg camera, integrating, for low- and high temp. studies 4=23401
- Weissenberg camera, low-temp. 2=17002
- Weissenberg, equi-inclination osc. photographs, for instability studies 3=11249
- Weissenberg goniometer low temp. attachment 4=30840

 bent-crystal emission instrument 1=16471

X-ray spectrometers—contd

- bent-crystal vacuum spectrometer 2=1959
- bent-crystal, variable reflecting 2=20086
- beryl, single-crystal, diffraction, for deuterium plasma in Scylla 3=7581
- coincidence loss evaluated 2=3125
- collimation corrections, small-angle, machine calc. 4=16603
- counting spectrometer for soft X-ray attenuation meas. 1=4687
- coupling to pulse height discriminator, fluorescence anal. 4=13759
- curved-crystal fluorescence spectrograph 3=461
- curved crystals performance, 3-12 Å 4=633
- curved crystal, precision mounting, aberrations 0=17297
- curved crystal, resolving power 0=9330
- curved crystal, for 30-300 keV meas. 0=9671
- curved crystal, transmission type 0=20584
- curved-crystal, 2-metre (Caltech), intensity calibration 1=16738
- curved-crystal type 2=8544
- double-crystal, reading accuracy, analysis 4=16604
- double-crystal in vacuum region 2=7693
- double-in asymmetric Bragg reflection 2=4407
- DuMond, for X-ray attenuation coeff. meas. 2=12610
- fluorescence analyser, Tm⁷⁰ source 2=17108
- flow proportional counter, for 30-200 Å 0=15327
- high-resolution, operating in range 1.8-4.5 Å 3=8610
- high vacuum spectrograph, high resolving power 2=5424
- Johann-type, automatic, for chemical analysis 2=17111
- Johann-type, film holder, remotely controlled 2=22290
- Johann-type microfocus spectrometer 3=4233
- linear focusing, for electron probe X-ray microanalyser 4=10679
- magnetic Compton spectrometer, bremsstrahlung 2=3309
- many-crystal, exact adjustment of crystals 3=2071
- microanalyser, electron probe, with 90 deg. take-off angle 3=4237
- microanalyser, X-ray 2=17109
- multichannel Laue spectrometer 0=3338
- 0.7 Å range spectra study, use with electron-probe microanalyser 4=27601
- prochlorite (natural silicate) as diffraction crystals 3=4230
- proportional counters in coincidence 0=17131
- proportional counters with pulse-height analyser for Cu K α meas. 3=24421
- resolution of Johann mounting single-crystal type 3=4236
- review 2=1621
- rollers used instead of gears 2=15977
- rotating tube for vacuum spectrograph 1=1952
- scanning microanalyser 0=4761
- scintillation counters, for emission study 0=17296
- scintillation NaI spectrometer 0=17296
- scintillation, pulse-height distrib. 2=22481
- Siegbahn-Magnusson type, for Al spectrum 2=4161
- single crystal diffractometers, for absorpt. give structure meas., comparison 4=13758
- single-crystal multichannel scanning spectrometer 4=4726
- soft X-ray, using Be—Cu photomultiplier 1=1953
- for soft X-rays, pulsed source, phosphor-photomultiplier detector 2=22291
- for solar obs. from satellite 3=9152
- spectra shape correction circuit 3=5601
- spectrograph to determ. chemical composition in microvolumes 2=17110
- spectrophotometer for simultaneous analysis of several elements 4=30009
- with two concave gratings, resolving power calc. 0=14827
- two-crystal, theory 4=20773
- two-crystal scintillation pair-spectrometer. 4=6016
- two-crystals and spectrometers, for fine structure 3=17012
- with 2m arm 3=21919
- ultrasoft, with two forms of detection 3=9895
- vacuum-type, high resolution 3=4234
- window effects, on K absorption edge of Au 0=9760
- Si as focussing analyser crystal, for fine structure 3=21920

X-ray spectroscopy

- See also X-ray crystallography; X-ray diffraction.
- absorption spectrometry, review 4=14844
- use for alloy analysis 2=4585
- β filter absorption, effect on emission lines 1=16472
- camera, low temp. 3=21921

 diffusion in UO_2 , after fission, on annealing at 1400°C 4=12805
 diffusion in UO_2 , increase on irradiation 4=6879
 diffusion in UO_2 - Y_2O_3 solid solns., of Xe^{133} , on irradi. and heating 4=15496
 diffusion of Xe^{133} in UO_2 2=6362
 discharge, elec., d.c., e.m. noise reson., micro-wave 4=21473-4
 discharge, glow, anomalous, charge-exchange 3=19219
 discharge, high-pressure, radial temp. and mobility 3=19192

Xenon-contd

discharge, pulse, possible maser action 4=489
 discharge, vacuum u.v. spectra 3=7462
 effect on radiolysis of CO 0=12108
 elec. arcs, a.c., cathode mechanism 0=16990
 elec. arcs, h.p., long discharge 0=2342
 elec. arcs, h.p., modulated, dynamic props. 0=12599
 elec. arcs, h.p., probe studies 0=16992
 electric arc, high-pressure, voltage-current charact. 3=24262
 elec. arcs, h.p., wall stabilized 0=1107
 elec. arcs, temp., spectral meas. 0=19520
 elec. breakdown, 2800 Mc/s 0=253
 elec. discharges, effect of H and He admixture 3=4045
 elec. discharge, h.p., transparency 0=9011
 elec. discharges, repetitive, spark channel explosions 3=1950
 elec. discharge, s.h.f., mean frequency of ionization by electrons 0=15029
 elec. discharge, $\text{Xe}-\text{N}_2$ -Ba, metastable state of N_2 3=2618-19
 electron avalanches, mean energy and drift velocities 4=11546
 electron momentum-transfer collision frequ. in He mixtures 3=24220
 electron orbit angular momentum, distrib., pressure depend. 0=13388
 electron-photon showers in, fluctuations 4=3384
 electron scatt., multiple, 40-130 keV, spatial distrib. 4=887
 electron stopping power 0=352
 enthalpy-entropy diagram 2=11421
 equation of state, expt., for solid Xe 4=15436
 eqn. of state, internal energy and entropy 1=6896
 equation of state, 0°-150°C 4=21175
 flash source, intensity meas. 0=8789
 flashtube, spectrum 0.4-1.1 μ 2=7369
 in flashtubes, thermal radiation characteristics 4=14442
 force parameters, calc. using exp 6-8 model 0=1515
 gas, corresponding states theory 2=15643
 gas discharge, density and temp. gradient meas. 4=14588
 gas discharge flash tube, for masers, optical, ruby, design 3=19217
 gas discharge tube, temp. meas., by spectral line self reversal 4=18786-7
 gas, ionization by H^- and O^- ions 1=4558
 gas, ionized, rarefied, charge-carrier diffusion 3=16906
 gas, slow-electron drift vel. 77°-443°K 2=19900
 glow, admixture rel. to Ne reference tube 3=4054
 intermolecular potential functions, 2nd virial coeff. 1=7503
 ionic complexes with acetylene, by electron irradi. 2=6893
 ionization, double, by electrons 0=2317
 ionization by electron impact, structure near threshold 1=7025
 ionization by electrons, mass spectrometer study 2=15883
 ionization and formation of long-lived excited ions 4=25492
 ionization by h.f. pulse, recombination 3=4024
 ionization, multiple, by electrons 0=2318, 7070
 ionization potential of multiply charged Xe 1=7023
 ionization potential by photoelectron energy spectra 3=7434
 ionization rates in shock-heated gas 4=11522
 ionization, relativistic increase 0=1099
 ionization in shock tubes, early processes 4=5554
 ionized by m.h.d. shock tube, elec. cond., 5800, 8000°K 4=14581
 ions in air, charge exchange cross-sections, meas. 4=27491
 ions, appearance potential 4=24546
 ion beams, multiply-charged, in isotope separator 3=14669
 ion beam, range in metals from sputtering yield 3=5721
 ions bombarding W, ionic entrapment and thermal desorption 4=13693
 ions, charge exchange with molecules, meas. 4=14574
 ions, in Cu, Ni, Mo crystal lattices, 5-30 keV 4=19120
 ions, ionization of inert gases 0=12578
 ions, multiply-charged, ionization potential 2=13538
 ions (133), range in Al, 0.5-240 keV 3=19372
 ions, range in monocryst. Si, 5-80 keV 4=22652
 ions, range in W, keV energies 3=22878
 ions, vacuum u. v. spectra 2=1201
 ions, Xe IX, spectrum, grazing incidence meas. 4=25490

Xenon—contd

ions, Xe^+ and Xe^{2+} , ionization cross-sections, for electrons 4=16433
 ions, Xe^{133} , range in Al and Au 3=12608
 isotope enrichment, by thermal diffusion 0=4126
 isotopes, mass spectra 2=13611
 isotopic composition in Richardson meteorite 0=4041, 14405
 isotropic composition in enstatite chondrites 1=4918
 lamp for colorimetry, stability 2=7316
 lamps for i.r. spectroscopy 1=4467
 lamps, short-arc, for optical communication 2=7347
 light source lamps, spectra, 230-1200 μm , effect of structure and excitation 3=16760
 light source, pulsed, spectra, var. time, discharge 4=24355
 liquid, density and short-range coordination 2=21893
 liquid, neg. ion mobility in 3=1678
 liquid, positive ion mobility 2=21895
 liquid, self-diffusion 2=13328
 liquid, thermal cond., expt. and theory 4=169
 luminescence, α -ray excited, weak, 2400-5000 Å 3=21447
 luminescence spectra, by α -ray excitation, variation due to N_2 and Hg impurities 1=8165
 luminescence, X-ray excited, increase due to electric field, pulsed 3=16664
 luminosity behind shock waves 1=15938-9
 maser, optical 3=17074
 maser, optical, discharge, pulse, possible 4=489
 maser, optical, effect of He on electron temp. and density 3=17091
 maser, optical, i.r., 2.5-13 μ , new freq. possibilities 3=17075
 maser, optical, 3.5 μ 3=24516
 melting line, to 1500 atm. 2=5220
 melting temp. at 300 atm 1=919
 in meteorite Abee 1=18066
 in meteorites, and their history 4=26930
 mixtures with A, bands in cathode glow of discharge 0=7766
 mixtures with A and H, binary and ternary, thermal cond. 0=5054
 mixtures with A and He, mutual diffusion 0=8702
 mixtures with A and Kr, h.v. discharge, visible band spectrum 0=4182
 mixtures with inert gases, thermal cond. 0=104
 mixtures with O_2 , excitation of spectra by electrons 0=15657
 molecular parameters, self-consistent set 1=12335
 n.m.r. of Xe^{129} , chemical shift 3=16667
 n.m.r. of Xe^{129} in liq. and gas 3=16666
 nuclear mag. resonance of Xe^{129} in liquid and gas 1=1758
 perxenate ion, configuration, Xe—O bond length 4=4629
 phase transformation, adsorbed in porous Vycor glass, from expansion 4=10630
 photoionization cross-sections, $^2\text{P}_{1/2}$ to 280 Å 4=21465
 photo-ionization efficiency curves, 9-14 eV 3=24211
 plasma in anode-glow mode, neg. resistance 3=5635
 plasma, cold, negative radiation temperature 3=9787
 plasma, partially ionized, anomalous microwave radiation at cyclotron resonance 4=5613
 plasma, r.f., stationary and running striations 3=4165
 plasma, radiation temperature resonances, r.f. meas. 3=4121
 plasma, use of vac. u. v. radiation as probe 4=14686-7
 plasma, z-pinch effect at high gas densities 4=14693
 poisoning in high-flux reactors, calc. 3=4696
 population inversion in discharge, Doppler broadening 3=22493
 positive column with 0.1% N_2 , positive characteristics 2=13549
 power reactor buildup, absorbed radioactivity calc. using sliderule 0=9723
 powerful impulsive discharges, electron energy meas. 3=7452
 production of π^0 , by 9 GeV/c π^- reaction 4=30251
 reactor control, temp. effects 2=6015
 reactor poisoning, steady states 2=3660
 refractive index and verdet const., theoretical deriv. 1=8164
 saturated vapour pressure difference for $\text{Xe}^{130,136}$ 3=21633
 scattering of electrons and positrons, 7-17 MeV 0=5764
 scattering of Li and K atoms, velocity depend. of cross-section 3=711

Xenon—contd

scattering of 153 MeV oxygen ions 2=16489
 in scintillation counter, and mixed with N, Ne 1=3077
 in scintillation counters, with organic u. v. converters 2=1626
 scintillator, used at 75 atm. 0=15190
 shock-heating 1=169
 solid, absorption spectrum, vac. u. v., at 4.2°K 0=13699
 solid, density and expansivity (20°-120°K) 1=9982
 solid, density and thermal expansion 3=6480
 solid, environmental perturbations on foreign atoms and molecules 0=20661
 solid films, electron energy loss 2=1514
 solid and liq., n.m.r. of Xe^{129} 3=18154
 solid, rotation and ortho—para conversion of water molecules 4=1275
 solid, scintillation due to α -particles 2=725
 solid, u. v. absorpt. and electron states 3=2998
 solutions in Kr, solid and liquid 0=8846
 sorption in graphite, high temp. 2=6855
 spark discharges, high-temp. prod. 0=7105
 spectra, continuous 2=16473
 spectrum, atomic, reson. 1469.6 Å line, satellites prod. by mixing with inert gases 4=22311
 spectrum, auto-ionizing states, u. v. 4=15280
 spectrum, continuous absorpt., energy levels 3=17535
 spectrum, continuous, vacuum u. v. 3=7246
 spectrum, continuous, visible, shock excited 4=29678
 spectrum, 400-800 Å, absorpt. ms— μs lines 4=12380
 spectrum, solid, 1070 Å 4=17584
 spectrum, trapped in Ar, Kr at low temps. 4=7160
 sputtering of K 2=3093
 stroboscopic flash source 0=10778
 thermal diffusion, at tracer concentrations, in other gases 0=8696
 thermal ionization, kinetics 3=14515
 thermal ionization, rate and mechanism 1=18768
 triton range, 0.2-2.7 MeV 3=10180
 u.s. absorpt. 2=7256
 use in bubble chambers with Freon and propane 4=16773
 vapour press. below 90°K 2=1175
 vapour pressure of isotopes in solid state 1=6067
 viscosity, high-temp. calc. from intermolecular data 2=2771
 viscosity, meas. 0=16723
 viscosity meas., effect of press. up to 820 atm 4=27214
 X-ray spectra, L-absorption 3=8189
 Xe^+ ions, sputtering of Cu, 25 to 60 keV 4=20321
 Xe^+ , ionization near metallic surface and highly excited states, long-lived 4=25514
 Xe^+ sputtering of Cu, Ni, Fe, Mo, 100-1000 eV 3=4216
 Xe^+ , sputtering of quartz 1=3026
 Xe^+ , sputtering yields, atomic number depend. 2=11726
 (Xe^+ , Xe) charge transfer 2=22167
 Xe^+ and Xe^{2+} , ionization by electron impact 4=5560
 Xe^{2+} , resonance charge exchange 0=8999
 $\text{Xe}^{2+,3+}$ ionization near metallic surface and highly excited states, long-lived 4=25514
 $\text{Xe}^{3+,4+}$ ions in Ne, charge exchange 2=15891
 Xe^{4+} , $^{4+}$ ions in Ne, charge exchange 3=5630
 Xe_2 , excitation by shock waves, u. v. and visible emission 0=15728-9
 Xe^{126} ion range in amorphous Al_2O_3 , WO_3 , meas., comp. to theory 4=27580
 Xe^{129} ages in meteorites 1=15440
 Xe^{129} in atmosphere, rel. to solar system chronology 3=9165
 $\text{Xe}^{129,131}$, n.m.r. relaxation time rel. to gas density 3=23944
 $\text{Xe}^{129}/\text{Xe}^{132}$ in meteorite Bruderheim chondrules 3=11524
 $\text{Xe}^{129}/\text{Xe}^{136}$ formation interval, rel. to solar system chronology 3=9166
 Xe^{133} , diffusion in ThO_2 0=15874
 Xe^{133} , diffusion in U oxides 0=1607
 Xe^{135} instability problem in reactor 2=20703
 Xe^{137} , 3.9 min, decay scheme rel. to superconducting nuclear matter 4=3609
 Xe I, i. r. spectrum, new lines 2=3703
 Xe—F, i. r. spectral study of mixture 4=2836
 Xe—He gas system immiscibility conditions obs. 4=5215
 Xe—He, maser, optical, very high gain, 3.5 μ 3=17089
 Xe—He mixtures, ionization by relativistic electrons 2=11613
 Xe^{n+} —Ne, and Xe— Ne^{n+} collisions, ionization 2=3718

Xenon—contdXeⁿ⁺—Ne; and Xe—Neⁿ⁺ collisions; ionization 3=2583

Xe—water vapour mixtures, afterglow decay rates 4=24599

Xenon compounds

fluorides, bonding wavefunctions 3=17589

Mössbauer effect 4=20170

A—Xe mixtures, solid—liquid phase equil. 1=1848

Xe fluorides, reaction with oxides of nitrogen, rates 4=23630

Xe-hydrocarbon ions, formation from nuclear decay 3=16183

Xe—methyl iodide, SF₆ "indicator-cpds", ionization by electron bombardment 4=29868XeF, radical, in γ -irradiated XeF₄, e.s.r. spectrum 3=25136XeF₂, chemical shifts, calc. 4=20074XeF₂, crystal and molec. structr. 3=16073-4XeF₂, forbidden electronic transitions 4=17298XeF₂, molec. electronic structure 3=15356XeF₂, n.m.r., chemical shifts 3=17617Xe¹²⁹F₂, Xe¹²⁹F₄, Na₄Xe¹²⁹O₆.H₂O, hydroquinone clathrate, Mössbauer effect, 4.2°K 3=17634XeF₂, XeF₄, binding mechanism 3=15357XeF₂, XeF₄, bond nature 3=20000XeF₂, XeF₄, mol. structure, calc. 3=15355XeF₂, XeF₄, neutron diff. crystal structure meas. 4=29147XeF₄, crystal and molec. structr. 3=16073, 16075XeF₄, crystal structure 3=6846XeF₄, crystal structure, atomic, monoclinic phase 3=23452**Xenon compounds—contd**XeF₄, diamag. suscept., LCAO—MO calc. 4=12490XeF₂, electronic structure and spectrum, MO treatment 4=17299XeF₄, F¹⁹ n.m.r. spectrum 3=15387XeF₂, forbidden electronic transitions 4=17298XeF₄, mean vibr. ampl. and thermodyn. functions 4=25688XeF₄, molec. electronic structure 3=15356XeF₄, n.m.r., anisotropy of F¹⁹ shift, -110°C 4=7348XeF₄, n.m.r., anisotropy of shielding tensor 4=23069XeF₄, n.m.r., chem. shifts and nuclear coupling 3=17617XeF₄, n.m.r. of F¹⁹ 4=20613XeF₄, nuc. mag. res. of F¹⁹ 3=12868XeF₄, polycrystalline, F¹⁹ mag. shielding anisotropy, sign 4=23070XeF₄, structure 3=12844XeF₆, chemical shifts, calc. 4=20074XeF₆, n.m.r., chemical shifts 3=17617XeF₆ (n = 2, 4, 6) chemical shift calc. 4=9769XeF₆—HF, liquid, F¹⁹ n.m.r., e.s.r., anomalies 4=21157XeF₂:XeF₄, crystal structure 4=4628

XeN, 4925 Å system, rotational structure 2=6168

XeO, visible spectrum 2=6169

XeO₃ in H₂O, Raman spectrum 4=25689XeOF₄, chemical shifts, calc. 4=20074XeOF₄, microwave spectrum, 20-40Gc/s 4=26225XeOF₄, n.m.r., chem. shifts and nuclear coupling 3=17617XeOF₄, n.m.r. of Xe¹²⁹, by second r.f. appln. 3=20016XeOF₄, spectra and melting point 3=17590

Ytterbium

- atom, K α X-rays from radioactive sources 4=9665
 atom, self-consistent wave functions 3=8197
 atoms, spectra, h.f.s. 3=2364
 crystal line compounds, electronic structure, Yb³⁺ in cubic potentials and exchange field, calc. 4=6696
 diffusion of O₂ and N₂, between interstitial sites 4=15497
 electrical conductivity, effect of very high pressures 2=619
 electrical conductivity, 1.5-20.3°K 4=17473
 elec. resistance, effect of temp. and press. 3=13038
 elec. resistivity, 1.3-300°K 0=6080
 electronic structure by positron annihilation 4=17413
 fusion curve and f.c.c. — b.c.c. transition to 40 kbar 4=29022
 half-life, positron spectra 2=3520
 heat capacity from 15°-350°K 4=25861
 impurity in CdS, i.r. absorption 1=11380
 ions, relaxation in ferrimag. resonance 2=21356
 ions, Yb³⁺, absorption spectrum in CaF₂ single crystal 2=16828
 ions, Yb³⁺ in crystals, mag. and spectroscopic theoretical investigation 2=21295
 isotopes, masses meas. 3=4727
 laser action of ions in silicate glass, simultaneous with Nd ions 3=7737
 neutron diffraction, Debye temp. 1=2219
 paramag. resonance and optical spectra of Yb³⁺ in CaF₂ 0=11938
 phase transform and behaviour at h.p. 4=17767
 resistance, elec., 4-lead meas. system 4=30612
 semiconducting region at 20-40 kbars 3=17899
 specific heat, 0.4-4°K, meas. and theory 3=8368
 stacking faults, energy calc. 4=12769
 target prep. from the oxide 2=19114
 transition from f.c.c. to b.c.c. 3=6817
 virtual bound state model for high-pressure resist. 3=2756
 X-ray atomic scatt. factor 2=10862
 X-ray spectrum, M ν , by 30-100 keV protons 4=30385
 Yb³⁺, ionic distrib. coefficient in CaF₂ 1=14990
 Yb³⁺ crystal field in YGa garnet 4=12560
 Yb³⁺ e.s.r. in CaF₂ 3=3172
 Yb³⁺, e. s. r. in CaWO₄, at 20°K and 3 cm 4=20604
 Yb³⁺ e.s.r. and spin-lattice relax. in CdF₂ 4=26442
 Yb³⁺, e.s.r. in SrTiO₃ 4=26441
 Yb³⁺, electron structure, free and in cryst. field 3=8379
 Yb³⁺ energy levels in YGa and YAl garnets 4=1354
 Yb³⁺ in garnets, crystal field 4=25806
 Yb³⁺ magnetization process, in gallate garnets, high temp. var., calc. 4=20517
 Yb³⁺ paramag. resonance, g-value shifts by exchange interactions 4=7318
 Yb³⁺ in soln., near i.r. transitions 3=23885
 Yb³⁺ in CaWO₄, e.p.r. 4=23058
 Yb³⁺ in CdF₂, spin-lattice relax., 2-77°K 3=18138
 Yb³⁺ in Y₂O₃ e.s.r. 3=18135
 Yb¹⁷¹ n, m, r. in metal and cpds., Knight shift 4=10348

Ytterbium compounds

- Yb ethyl sulphate, spin-lattice relaxation 1=14809
 Yb gallate, magnetic saturation, high pulsed fields 4=19154

Yttrium compounds—contd

- Y ethylsulphate, spin—lattice relax of Dy^{3+} 4=7326
 Y ferrite garnet, ferrimagnetic resonance, —196° to 20°C
 rel. to domain structure 4=7313
 Y ferrites, hydrothermal synthesis 3=18272
 Y ferrites, paramag. susceptibility 1=20142
 Y garnet, excitation of ferrimagnetic resonance by
 pulsed mag. field 1=14783
 Y garnet, ferrimagnetic resonance 1=20184
 Y garnet, microhardness 2=21449
 Y garnet single crystals, growth by pulling
 technique 4=13549
 Y garnet, effect of substitution of Fe by Sc on mag. props.
 and crystal structure 4=7650
 Y garnet with rare-earth impurities, resonance
 line width 3=25558
 yttrium iron garnet, growing of monocrystals 1=11544
 Y orthoaluminate, e. s. r. of Fe^{3+} , Gd^{3+} 4=30733
 Y oxide, growth, burner used 2=19056
 Y oxide, secondary electron emission 2=1498, 7653
 Y with rare earths, adiabatic
 demagnetization 1=11414
 Y tungstate, red luminescence under u.v.
 excitation 3=13206
 Y—Al, crystal structure, new cpds. 2=4437
 YAl garnet, Cr^{3+} ground state, zero-field splitting 1=14806
 YAl garnet, energy levels of Yb^{3+} 4=1354
 YAl garnet, Pr-doped, absorption and fluorescence
 spectra, Pr bond covalence 3=23072
 YAl, YGa and YGd garnets, Nd-doped, laser oscilla-
 tions 4=19309
 $Y_3Al_3Fe_2O_{12}$, ionic distrib. 1=20562
 YB_6 , powder, emissivity 0=16919
 YBe, and ABe_{13} cpds, crystal structure 4=15797
 YBi, crystal structure, atomic 4=2094
 $(Y_{2.75}Bi_{0.25})Fe_{5-x}Al_xO_{12}$, effect of Bi^{3+} substitution 4=23023
 Y chromates, crystal structure 4=29135
 YC_2 neutron diffract. & paramag. scatt. analyses 3=1328
 YC_2 , structure 2=4419
 YCl_3 , rare earth ion e. s. r. 4=30731
 YCo_5 ferromagnetic, props. room temp. and
 below 3=15731
 YCo_5 , mag. structure 3=8682
 YCo_5 , thermomag. studies 2=10640
 YCu_2 , crystal structure, atomic, twinning 4=4630
 Y—Dy garnets, magnetic properties 1=20144
 Y—Eu mixed garnets, mag. props. 3=3124
 YFe ferrite, ferromag. resonance 3=6738
 YFe ferrite, rotational magnetization reversal 3=15873
 YFe, Ga-substituted, n.m.r. of Ga^{69} and Ga^{71} 4=28897
 YFe garnet, acoustic losses 2=12688
 YFe garnet, acoustic parametric amplification at micro-
 wave freqs. 4=20208
 YFe garnet, adiabatic demagnetization and spec. heat mag.
 field depend. at 1.45°K 0=16143
 YFe garnet, Al-substituted, ferrimag. resonance 1=14781
 YFe garnet, anisotropy calc., Fe^{3+} in YGa
 garnet 1=6362
 YFe garnet, anisotropy energy 1=2496
 YFe garnet, chem. faults and dislocations, etching
 method 2=23814
 YFe garnet containing Nd, Pr, La ions, unit cell
 dimensions 1=20567
 YFe garnet, crystal field calc. for 3 sites 3=2693
 YFe garnet, crystal orientation from etch patterns 2=23815
 YFe garnet, crystal structure, refinement 3=8834
 YFe garnet, Curie temp. meas. 1=14749
 YFe garnet disk in microwave cavity 0=2448
 YFe garnet, disks, ferrimag. reson. 0=9187
 YFe garnet disks, ferrimag. resonance 1=6405
 YFe garnet, divalent iron substitution 0=13836
 YFe garnet, domain structure 0=16141
 YFe garnet, domain structure 2=751
 YFe garnet, domain wall mobility 1=6367
 YFe garnet, effect of Nd substitution 2=21339
 YFe garnet, e. m. dispersion and magnetoacoustic
 waves 4=26365
 YFe garnet, for electromagnetic mm wave appls. 4=19187
 YFe garnet, electron spin relaxation 0=6258
 YFe garnet, ellipsoidal samples, resonant
 frequency shift 1=6400
 YFe garnet, exchange interactions 4=28849

Yttrium compounds—contd

- YFe garnet, ferromag. relaxation mechanism for M_z 0=10200
 YFe garnet, Fe^{57} h.f.s. from Mössbauer effect,
 internal fields 1=9036
 YFe garnet, Fe^{57} magnetic resonance and
 relaxation 1=7804
 YFe garnet, Fe^{57} relaxation 3=23252
 YFe garnet, ferrimagnetic parallel pumping spin-wave
 anisotropy 4=13294
 YFe garnet, ferrimagnetic resonance 2=18934
 YFe garnet, ferrimag. resonance, effect of Tb 1=20185
 YFe garnet, ferrimag. resonance at high power 1=12554
 YFe garnet, ferrimag. reson. line width and n, m, r.,
 effect of rare earth doping 4=7312
 YFe garnet, ferrimag. resonance and nuc. relax.,
 impurity effects 4=7315
 YFe garnet, ferrimagnetic resonance, rare-earth doped,
 theory 3=23216
 YFe garnet, ferrimag. res. saturation effects 0=10205
 YFe garnet, ferrimag. resonance width 2=18936
 YFe garnet, ferrimagnetic resonance, 1496 and 1010
 Mc/s 4=7314
 YFe garnet ferrites, r.f. dispersion, electron
 diffusion effects 1=20125
 YFe garnet, ferro-acoustic resonance 3=11129
 YFe garnet, ferromag. relaxation at low temp. 1=14777
 YFe garnet, ferromag. relaxation at low temp.,
 theory 1=7761
 YFe garnet, ferromag. reson. 3=3154
 YFe garnet, ferromagnetic resonance 1=20181
 YFe garnet, ferromag. resonance freq. shift 4=7308
 YFe garnet, ferromag. reson., In^{3+} substitution effects below
 100°K 4=26362
 YFe garnet, ferromagnetic resonance rel. to induced
 anisotropy 3=8702
 YFe garnet, ferromag. reson., magnetostatic modes,
 instability 4=26361
 YFe garnet, ferromag. resonance, order—disorder
 effects 4=28863
 YFe garnet, ferromag. resonance, effect of surface of
 crystal 0=10195
 YFe garnet, ferromag. resonance, subsidiary absorption
 suppressed by modulation techniques 1=7779-80
 YFe garnet, ferromag. resonance, theory of giant
 anisotropy anomalies 0=6252
 YFe garnet, Ga and Al substituted, ferromag.
 resonance 4=7302
 YFe garnet, heat transport by spin waves 3=8374
 YFe garnet, hyperfine Zeeman splitting, 85° and
 300°K 3=994
 YFe garnet, impure, Fe^{57} relaxation calc. 2=6704
 YFe garnet, impurity-doped, ferrimag. resonance 0=10211
 YFe garnet, interaction of photons and spin waves 0=18210
 YFe garnet, internal fields at Fe nuclei in a and d
 lattices, by Mössbauer absorption 1=7769
 YFe garnet, low-temp. specific heat, spin wave
 contrib. 4=9855
 YFe garnet, mag. anisotropy at 0°K 1=6363
 YFe garnet, magnetic anisotropy 1=6366
 YFe garnet, magnetic anisotropy, induced, with Si and Mn
 additions 4=13254
 YFe garnet, magnetic annealing 0=3091
 YFe garnet, mag. component due to spin waves 2=16924
 YFe garnet, mag. domains, effect of crystal growth 2=14800
 YFe garnet, magnetic initial permeability, var. density,
 5 kc/s—7.5 Gc/s 4=13252
 YFe garnet, magnetic lag effects 0=3092
 YFe garnet, mag. meas. and mol. field model 4=20559
 YFe garnet, magnetic props. 1=12537
 YFe garnet, magnetic props. 1=14734
 YFe garnet, mag. props., substitution lattice site
 effects 4=26343
 YFe garnet, mag. res. instability in crystal
 spheres 0=10210
 YFe garnet, mag. reson., strong dispersion, field
 var. 4=26363
 YFe garnet, magnetization, temp. depend. 2=12686
 YFe garnet, magnetoelastic interactions in parallel
 pumping 3=15884
 YFe garnet, magnetoelastic r.f. pulses, freq.—time—mag.
 field characteristics 4=12632
 YFe garnet, magnetostrict., meas. and theory 3=15801
 YFe garnet, magnetostriction 3=15852

Yttrium compounds—contd

- YFe garnet, microwave absorption in parallel-pumping expts. 3=15883
 YFe garnet, microwave acoustic losses, temp. depend. 2=10322
 YFe garnet, microwave generation, second harmonic 1=14751
 YFe garnet, microwave magnetic and dielectric props. 0=11896
 YFe garnet, microwave permeability 1=14778
 YFe garnet monocrystals, ferrimag. resonance 2=10687
 YFe garnet, morphology 4=10458
 YFe garnet, multiple magnon processes 3=18122
 YFe garnet, n.m.r. of Fe⁵⁷ 1=7805
 YFe garnet, n.m.r. freq., anisotropy 3=3205
 YFe garnet, Nd-substituted, ferrimagnetic properties 3=25546
 YFe garnet, Nd-substituted, mag. and crystallographic study 1=12542
 YFe garnet, nonlinear response of ferromag. resonance 1=6409
 YFe garnet, optical interaction, at ferrimagnetic resonance 3=6644
 YFe garnet, orientation using ferrimagnetic resonance 1=14782
 YFe garnet, phase transform., by differential thermal anal. 3=8796
 YFe garnet, rare-earth doped, ferrimag. reson. linewidth 2=18939
 YFe garnet, rare earth doped, ferrimag. reson. 4=13295
 YFe garnet, rare-earth doped, ferrimag. resonance 0=18211
 YFe garnet, rare-earth-doped, ferrimag. resonance and spec. ht., theory 1=14611
 YFe garnet, rare-earth substituted, ferrimag. res. rel. to temp. 3=23215
 YFe garnet, rare earth substituted, magnetic flux reversal speed 4=13253
 YFe garnet, relax., near instability threshold 3=3157
 YFe garnet, relaxation at low microwave frequencies 1=6402
 YFe garnet, relaxation mechanisms in ferromag. resonance 1=7781
 YFe garnet, resonances in waveguide, effect of freq. modulation 2=6685
 YFe garnet, Sb⁵⁺ substituted for Fe³⁺, mag. moment var., Curie temp., and crystallography 4=26344
 YFe garnet, single crystal, saturation magnetostriction 3=15888
 YFe garnet, size effects on ferrimag. resonance absorption 0=21066
 YFe garnet, Sn-substituted, canted spin arrangements 0=1779
 YFe garnet, specific heat at low temps. 0=9855
 YFe garnet, specific heat, 1.5–4.2°K 1=7539
 YFe garnet sphere, cause of magnetoacoustic resonance 1=6408
 YFe garnet spheres, ferrimag. res. line width 0=3122
 YFe garnet spheres, magnetoacoustic resonance 0=3862
 YFe garnet, spin-wave growth under parallel pumping 3=15899
 YFe garnet, spin-wave normal modes calc. 4=7293
 YFe garnet, spin-wave propag. and magnetoelastic interaction 3=15889
 YFe garnet, spin-wave propag., proposed expt. 2=4233
 YFe garnet, spin-wave propagation 2=21338
 YFe garnet spin-wave relaxation in ferromag. resonance 0=3113
 YFe garnet, spin-wave resonance curve width rel. to Dy impurity 4=10305
 YFe garnet, spin-wave spectrum 1=1250
 YFe garnet, spin-wave spectrum anisotropy 1=6387
 YFe garnet, spin-wave spectrum anisotropy 3=23209
 YFe garnet spin-wave spectrum, temp. dependence 1=6353
 YFe garnet, spin waves excited by parallel pumping 4=10285
 YFe garnet spin wave transitory growth on microwave pumping 4=13227
 YFe garnet square hysteresis loops 3=15868
 YFe garnet, static crystal-field effects on ferromag. resonance 2=21353
 YFe garnet, subsidiary resonance at 9253 Mc/s 1=6407

Yttrium compounds—contd

- YFe garnet, substitution of divalent transition metal ions 2=12690
 YFe garnet, substitution of Mn²⁺, Fe²⁺ and Ni²⁺ 3=3129
 YFe garnet, susceptibility in strong r.f. mag. field 2=6661
 YFe garnet, use of ferromag. resonance in magnetometers 4=21615
 YFe garnet, terbium doped, ferrimag. reson. 2=14820
 YFe garnet, torque measurements 1=6364
 YFe garnet, transverse ferroacoustic resonance 4=9846
 YFe garnet, with Tb impurity, ferrimagnetic resonance curve width fine structure ang. dependence 4=1862
 YFe garnet, 2-magnon scatt. processes 3=15916
 YFe garnet, use in u.h.f. delay line 3=14778
 YFe garnet, wall effect in ferrimag. resonance 1=1254
 YFe garnet, Yb doped, ferrimag. reson., relax. theories 4=13296
 YFe garnets, with Al³⁺ and Cr³⁺, magnetic props. 0=13835
 YFe garnets, dipolar ferrite modes 0=9188
 YFe garnets, ferromag. reson. line widths, temp. and freq. depend. 3=23210
 YFe garnets, ferromag. reson., temp. depend. 0=11929
 YFe garnets, ferromagnetic resonance 0=10197
 YFe garnets, growth by floating zone method 1=6499
 YFe garnets, high-permeability 0=21056
 YFe garnets, i.r. absorption of silicate ion 0=2941
 YFe garnets, impurities occluded during crystal growth 1=14986
 YFe garnets, magnetization and resonance props. 3=6721
 YFe garnets, method for growth 0=10286
 YFe garnets, with Nd, prep. and saturation magnetization 0=21057
 YFe garnets in pulsed mag. fields, resonance expts. 0=10177
 YFe garnets, rare-earth doped, ferrimag. resonance 1=6406
 YFe garnets, spin wave linewidth, rel. to subsidiary resonance suppression 3=18119
 YFe oxide mixtures, phase transform., by differential thermal anal. 3=8796
 Y-Fe, X-ray analysis of rare earths 4=10677
 YFeAl ferrite, ferrimagnetic resonance 3=6743
 Y₃Fe₂(FeO₄)₃, crystallization 1=14966
 (1-x) {Y₃} [Fe₃] (Fe₃)O₁₂ - x {YCa²⁺} [Fe₃] (Fe₃V³⁺)O₁₂, ferromag. props. 3=5025
 (1-x) {Y₃} [Fe₃] (Fe₃)O₁₂ - x {Ca²⁺} [Fe₃] (Si⁴⁺)O₁₂, ferromag. props. 3=5025
 YFeO₃, magnetic domains by Kerr effect 3=18103
 YFeO₃, remanent mag., field depend. 3=11063
 Y₃Fe₂O₁₂ crystal growth 3=20801
 Y₃Fe₂O₁₂, neutron diff. exam., mag. structure 3=23186
 YFe and YGa garnets, method for growth 0=10286
 YFeAl ferrite, ferrimagnetic resonance 2=21354
 Y₃Fe_{5-x}Al_xO₁₂, mag. spectra, 0.1–3000 Mc/s 4=30724
 Y₃Fe₂Fe₃O₁₂-Ca₃Fe₂Sn₃O₁₂, crystal chemistry and mag. props. 0=6359
 YFe-GdFe garnets, mag. moments and lattice consts. 0=3089
 Y₃Fe_{5-x}In_xO₁₂, ferrimagnetic resonance line-width 1=1255
 YFeO₃, exchange interaction, antisymmetric 2=12666
 Y₃Fe₅O₁₂ containing rare earths, e.s.r. study 0=4516
 Y₃Fe₅O₁₂ containing rare earths, mag. props. 0=4517
 Y₃Fe₅O₁₂, crystal growing 0=13953
 Y₃Fe₅O₁₂, Faraday effect at 1.9 μ 0=13677
 Y₃Fe₅O₁₂, ferromagnetic resonance 0=6251
 Y₃Fe₅O₁₂, field depend. of mag. susceptibility in saturation fields 4=30723
 Y₃Fe₅O₁₂, garnet structure, u.h.f. props. 0=6243
 YGa garnet, absorpt. spectrum of Er³⁺ 3=13172
 YGa garnet, crystal field for Yb³⁺, 9 parameters 4=12560
 YGa garnet Cr³⁺ ground state, zero-field splitting 1=14806
 YGa garnet, with Cu²⁺, absorption spectrum 1=14609
 YGa garnet, Dy³⁺ e.s.r. lines 3=15937
 YGa garnet, energy levels of Yb³⁺ 4=1354
 YGa garnet, Fe²⁺ crystal field parameters, YFe garnet anisotropy calc. 1=6362
 YGa garnet, Fe³⁺ ground-state cubic crystal field splitting parameter, sign 0=1824
 YGa garnet, Fe³⁺ resonance in octahedral and tetrahedral sites 1=2496

Yttrium compounds—contd

- Y Ca garnet, Yb^{3+} absorption spectrum 1=2442
 YGa garnet, Yb^{3+} crystal field 4=25806
 YGa garnets, method for growth 0=10286
 YGa garnets, rare-earth activated, visible luminescence at 77°K 1=5055
 YGaFe garnet, transverse ferroacoustic resonance 4=9846
 $\text{Y}_2\text{Ga}_2(\text{GaO}_4)_3$, crystallization 1=14966
 $\text{Y}_3\text{Ga}_5\text{O}_{12}$ containing 1% Yb^{3+} , e.s.r. obs. 0=4516
 YGd garnet, ferromagnetic resonance 0=10208
 YGd garnets, mixed, spontaneous magnetization 2=750
 Y(Gd)Cl₃.6H₂O, u.v. absorpt. spectrum 3=10945
 $\text{Y}_{3-x}\text{Gd}_x\text{Fe}_2\text{O}_{12}$, mag. spectra, 0.1-3000 Mc/s 4=30724
 $\text{Y}_{1-x}\text{Gd}_x\text{Os}_2$, ferromag. superconductor, heat capacity 1=1863
 $\text{Y}_{0.5}\text{Gd}_{1.5}\text{Se}_{2.0}$, ferromagnetism, below 47°K 4=13181
 YH₂ and YD₂, sp. ht. and thermodynamic props. 2=6278
 YH₃ and YD₃, heat capacity, thermodynamic functions, and i.r. spectra 3=17658
 YHo garnet, ferromagnetic resonance 0=10208
 Y—Ho garnets, ferrimagnetic props. 1=14750
 YI garnet, remanent mag., field depend. 3=11063
 YI₃, crystal structure 3=25714
 $\text{Y}_3\text{In}_x\text{Fe}_{5-x}\text{O}_{13}$, ($x < 0.5$), preparation and ferrimag. resonance 3=20800
 Y—Ir, superconductivity 4=18622
 YLa molec. dissociation energy determ. 4=12525
 Y—LaFe garnet, mag. props. and ferromag. resonance 4=1847
 Y—Lu, elec. cond. and mag. phenomena 3=13033
 Y—Mn alloys, structure and mag. props. 2=12925
 YMn₃, magnetic characteristics 1=9024
 YMnO₃, antiferromagnetism and ferroelectricity 4=13258
 YMnO₃, structure and mag. props. 4=7294
 YNd garnet, neutron diffraction investigation 3=23183
 YNi₂, magnetic props. of Laves phase 3=15746
 YO, B[∞] term, multiplet splitting 3=6388
 YO, Franck-Condon factors of band system 4=25660

Yttrium compounds — contd

- YO, molecular structure 2=10247
 YO vapour, dissociation energy and free energy 4=12528
 Y_2O_3 , Cr^{3+} e.s.r., 4.2-300°K 1=9053
 Y_2O_3 crystals, flame fusion growth 3=8805
 Y_2O_3 , electron emission, secondary, with thermal emission current 3=24343
 Y_2O_3 i.r. transmittance 1=14568
 Y_2O_3 , mixture with ZrO_2 , phase change temps. 4=23296
 Y_2O_3 , 10 and 15 wt % in HfO_2 , thermal effect expansion var. 4=30525
 Y_2O_3 , work function 0=19707
 Y_2O_3 , Y diffusion in, 1400-1800°C 3=22827
 Y_2O_3 .2BeO, crystal structure 2=17020
 Y_2O_3 :Eu, absorpt., excitation and fluorescence spectra, luminescent efficiency 4=10221
 Y_2O_3 :Eu³⁺, fluorescence and energy transfer 4=20489
 Y_2O_3 :Eu³⁺, fluorescence and stimulated emission 4=7181
 $(3-x)\text{Y}_2\text{O}_3 \cdot x\text{Gd}_2\text{O}_3 \cdot 5\text{Fe}_2\text{O}_3$, initial permeabilities 0=10137

 CdS , edge fluoresc. at low temps. 4=4293
 CdS , exciton fluorescence, anomalous effect 2=8559
 CdS , excitons 2=23527
 CdS fluorescence spectra, 4.2°K 0=1745
 CdS , Zeeman splitting of $n=2$ exciton state, direct observation of exciton motion 1=3636
 CdSe , exciton spectra rel. to structure 2=10359

Zeeman effect-contd

CeCl_3 , crystal field components of electronic ground state 4=7217
 Cl, atomic, microwave 1=11068
 Cl, mult. quadrupole, recording r.f. spectrometer 0=17123
 Cl, in 6-chloro-2-nitrotoluene, n.q.r. Zeeman spectrum 4=17704
 Cl_2 , solid, n.q.r. line broadening 3=15411
 Cl^{35} , n.m.r., det. of upper limit for anisotropy of inertial mass 0=10561
 Cl^{35} n.q.r. in cpds. 4=25739
 Cl^{35} n.q.r. in ortho-dichlorobenzene 4=13355
 Cl^{35} in $(\text{PNCl}_2)_3$, nuclear quadrupole resonance 3=23264
 ClO_2 , microwave spectrum 2=20831
 Co, crossing two levels with same M value 4=22301
 CoCs_2Cl_6 , 20-1.6°K, 15-40 kG 3=13166
 CoCs_2Cl_6 , Co^{2+} decomposition, and two crystalline phases at low temps. 4=15585
 Cr^{3+} in Al_2O_3 , theory and exper. 0=645-6
 Cr_2O_3 , R absorption lines 3=15674
 Cs, D level hyperfine structure 1=17260
 Cs, 600-3000 G 3=17520
 Cu_2O , anisotropic absorption, calc., symmetry of excitons 1=7476
 Cu_2O , crystal excitons, polarization, up to 140 kOe 3=18002
 Cu_2O , exciton transitions 2=684, 18556, 20971
 Cu_2O , exciton yellow line 4=22854
 Cu_2O , excitons 1=6203
 Dy^{163} crystalline salts, 58° and 4.2°K 0=16054
 Dy salts 2=4156
 Er trivalent crystalline salts 1=1165
 Er^{3+} in crystalline salts 1=10099
 $(\text{Er}, \text{Gd})_2\text{O}_3$, 20° and 90°K 2=10606
 $(\text{Er}, \text{La})_2\text{O}_3$, at 20°K 2=10605
 $(\text{Er}, \text{Y})_2\text{O}_3$, 20° and 90°K 2=10606
 Eu bromate, visible spectrum 0=648
 $\text{EuCl}_3 \cdot 6\text{H}_2\text{O}$, visible spectrum 0=649
 EuFe garnet, spectrum, $^7\text{F}_0 \rightarrow ^7\text{F}_4$ line fine struct. 4=13054
 F, atomic, microwave 1=11067
 Fe^{57} , nuclear, γ -ray polarization 2=12125
 Fe^{57} in CoFe_2O_4 , 14.4 keV γ lines, investigated by Mössbauer effect 4=15402
 GaP, bound excitons, recomb. radiation 3=25254
 Ge, acceptor states 4=28706
 Ge donors 2=2231
 Ge, exciton and impurity levels 2=23128
 Ge, excitons 1=6203
 Ge: Cu, i.r. at low temp. 0=18124
 Ge: Zn, i.r., at low temp. 0=18124
 $\text{H}\beta$ splitting, in solar prominences 2=24117
 H_2 , r.f., metastable electronic state established 0=20645
 He 0=476
 He-Ne laser, 1.153 μ transition meas. 4=8982
 He-Ne lasers, at 3.39 μ 4=14936
 in He-Ne optical maser 2=16025
 He-Ne planar laser 3=2145
 Hg atoms, fluorescence modulation by light and r.f. waves 1=17275
 Hg atoms, resonance fluorescence 1=12246
 Hg^{198} Zeeman filter wavelength rel. to that of 2537Å absorpt. line of atomic beam 4=6478
 Hg^{198} Zeeman-split absorption filter, wavelength passed 4=2830
 HgI and II spectra 3=15286
 Ho ethyl sulphate, due to $^5\text{I}_8 \rightarrow ^6\text{I}_5$ and $^5\text{I}_8 \rightarrow ^5\text{I}_4$ transitions 2=12605
 InH, new apparatus 4=30436
 $\text{K}^{39}\text{F}^{19}$, h.f.s., mol. beam resonance meas. 4=3867
 Lu I spectrum 3=22481
 $\text{MgO}:\text{Cr}^{3+}$, red fluorescence line 1=1180
 Mn^{+} 4=25503
 Mn I 1=13940
 MnI, first spectrum, use in analysis of 2030 lines 4=15281
 NH_3 4=6583
 NH_3 , obs. using maser spectrometer 3=12354
 NO_2 , far i.r., microwave interferometric obs. 4=17295
 Na, D level hyperfine structure 1=17260
 Na D-lines, differential filter design for optical pumping 1=11075
 Na, transition frequency and probability 0=464

Zeeman effect—contd

- Na I, in solar flare spectra, mag. field study 0=18759
 NaCl colour centre, search 4=30583
 Nd salts, energy level assignments 0=7686
 Nd³⁺ ion in NdCl₃ 1=8984
 NdI spectrum 4=9644
 O, fine level transitions, e.s.r. 4=6481
 O, rotational fine structure 0=3869
 OH and OD, microwave 1=7496
 O¹⁶H free radical, ²II_{1/2} levels 2=12335
 Os I and II 1=2293
 Os I, II 0=20588
 Pr, in ethylsulphate:Ce 1=1164
 PrCl₃, crystal field components of electronic ground state 4=7217
 Rb⁸⁷ and electron g factor 4=30382
 Ru I, 207 lines, 0.24-0.54 μ 0=7730
 Si, acceptor states 4=28706
 Si, impurity levels 0=11765
 Sm ground multiplet 1=13947
 Sm(C₂H₅SO₄)₂·9H₂O 1=6207
 SmCl₃, absorption and fluorescence spectra 3=3016
 SmMg nitrate 1=2443
 Sn¹¹⁹, in γ resonance absorption 1=2164
 Sn¹¹⁹, 24 keV transition, splitting in ferromagnetic metals 1=6273
 SrF₂:Sm²⁺, in absorption and luminescence spectra 3=18026
 Tb 0=17714
 Tb³⁺ ions in crystalline salts 2=6574
 Tl²⁰³F¹⁹, molecular-beam Stark—Zeeman effect 1=12293
 Tm ethyl sulphate 1=6209
 Tm I, II, arc and spark spectra 2=20747
 Tm¹⁶⁹, h.f.s., and nuclear mag. moment, from atomic beam mag. reson. 4=12378
 Y³⁹, h.f.s. splittings 0=1484-5
 Yb I, II, arc and spark spectra 2=20747
 YbFe garnet, anisotropy of exchange 2=23566
 ZnO, Cu²⁺, impurity, rel. to wavefunctions 4=4042

Zeta-potential

See Electrokinetic effects.

(Heading abolished in 1963; for later entries see Electrokinetic effects)

- colloids 2=23965
 oil droplets, in surface-active agent solns 0=19605
 Ag, AgBr, Ag₂S 2=1381

Zinc

- absorption spectrum, i.r., and Zeeman effect, as impurity in Ge 0=18124
 absorption of ultrasound at low temp. in mag. fields 1=3598
 adsorption of Ga, and diffusion 4=26729
 adsorption of Hg, and diffusion 4=26729
 amalgamated monocrystals, crack growth and fracture 0=16239-40
 anomalous skin effect and Fermi surface 1=17596
 arc stability 1=1899
 atom, first ¹P₁ state lifetime meas. 4=19968
 atom, μ-mesonic, X-ray transition energies 3=6370
 atom, visible triplet, intensity ratios at liq. N₂ temp. 4=22312
 atom, Zn^{65,67}, h.f.s., τ(³P₁) and g_J(³P₁) 4=15295
 atomic emission spectrum, intensity ratios of triplets 1=13952
 atomic i.r. emission spectra, 1.6 to 3.7 μ 4=3799
 atomic spectral line (6362A) narrowing 3=5465
 atoms, interatomic potential energy functions, from viscosity 4=25592
 atoms, mesic, μ⁻ decay anomaly 3=15312
 atoms, Zn^{65,67}, ³P₁ state, h.f.s. meas. 4=15294
 band structure and Fermi surface calc. 2=10352
 bicrystals, grain-boundary sliding 2=14895
 breaking strength, dep. on stress duration 1=14907
 breaking strength, dep. on stress duration 1=20370
 brittle fracture of amalgamated crystals 2=2334
 brittle fracture, effect of surface impurities 0=6316
 brittle fracture, rel. to surface phenomena, -200° to +200°C 4=10363
 brittle rupture 0=689
 cell substructure, rel. to orientation and rate of growth 2=2359
 coating on Cu, bonding phase structure 3=5146
 coating on steel, bonding phase structure 3=5146

Zinc—contd

- compressibility, quantum defect model, exchange correl. 4=28966
 condensation, on Si 4=29810
 condensation in vacuum and props. of condensate 3=16036
 contact potential, effect of illum. 2=8275, 10431
 crack development, due to locally applied drop of Hg or Ga 4=7465
 crack formation, during plastic deformation 0=688
 crack initiation, effect of Hg 4=13451
 cracks, development in presence of Ga and Hg 3=20757
 creep, heat cycling effects 4=13452
 creep, polycrystalline, anomalous activating energy 3=18190
 creep, pressure depend. 3=25633
 creep tests showing additional strain due to temp. variation 4=10405
 creep and viscosity of monocrystals, in air and under Sn layer 0=6311
 critical resolved shear stress, rel. to impurities 2=23745
 crystal, cleaved pits, spirally terraced, etching obs. 3=22787
 crystal dislocation arrays and substructures, etching obs. 4=6852
 crystal dislocations formed in growth or deform., etching obs. 4=9968
 crystal etching, electron microscope study 1=20415
 crystal, equilibrium form, from interatomic forces 4=7532
 crystal growth, large single crystals 0=8164
 crystal growth, large single, for neutron monochromatization 3=23403
 crystal growth, low disorientation and dislocation, by soft mould 4=17788
 crystal growth, simple method 0=3174
 crystal growth, u.s. effects 3=23392
 crystal growth, under high pressure 1=5090
 crystal growth from vapour phase 1=20432
 crystal nucleation from vapour on to glass 2=6781
 crystal twinning, plastic deform. induced 3=16026
 crystallization, re-, polygonization, from stress-strain relations 4=7519
 crystallization in u.s. field, role of insoluble impurities 4=26603
 crystals, cathodic sputtering, anisotropy 4=12823
 crystals, cleavage planes 4=23314
 crystals, etching with 8 keV A ions 0=8173
 crystals, phonon dispersion relation 2=20923
 crystals, slip, intergranular, by interferometry 3=6528
 crystals, work-softening 2=2328
 cyclotron resonance 1=17485
 deformation by hot torsion in polycrystalline Zn 4=28990
 deformation, rapid after-effect 3=18197
 deformation of single crystals, anisotropic effects of irradiation 4=23226
 de Haas—van Alphen effect 3=11029
 de Haas—van Alphen effect, low-field, model 2=10641
 density variation under thermal cycling, to 250°C 3=6868
 diffusion of Ag¹¹⁰ and In¹¹⁴, anisotropy 2=2101
 diffusion in Al and Al—Zn alloys, effect of fatigue 1=19807
 diffusion in Al, effect of mosaic structure 1=6110
 diffusion, in Al, temp. depend. 2=6380
 diffusion in AlSb 2=16665
 diffusion in Ar, temp. var., spectral absorpt. meas. 4=18244
 diffusion of Cd^{113m} and Au¹⁹⁸, anisotropic 3=17793
 diffusion in Cu, grain-boundary and lattice mechanism 0=1602
 diffusion in Cu, saddle-point config. model 3=2789
 diffusion in CuZn alloy, Ne⁺ ion irradiation effect 1=14322
 diffusion, in Cu₂O, microstructure effects 0=11640
 diffusion, in GaAs 0=9918
 diffusion in GaAs, to achieve low surface concs. 4=22614
 diffusion in GaAs Esaki diodes, rapid 4=17504
 diffusion in GaAs, under excess As vapour 4=22615
 diffusion in GaAs and GaP, mechanism expts. 4=22617
 diffusion in GaAs, interstitial mechanism 2=21066
 diffusion in GaAs, interstitial—substitutional 3=20225
 diffusion in GaAs through SiO₂ films 4=22616
 diffusion in Ge 2=12453
 diffusion of Hg, temp. var., surface and volume 4=1521

Zinc—contd

diffusion, impurity, screened interaction model 4=9997
 diffusion in InP, 600°-900°C meas. 4=22619
 diffusion, in InSb 0=9920
 diffusion in InSb 2=6381
 diffusion in InSb, single- and polycrystals 1=14308
 diffusion in liquid tin 1=141
 diffusion, in NaCl, temp. and conc. depend. 4=12803
 diffusion in Si, in elec. fields 3=17790
 diffusion in Sn crystals 2=605
 diffusion and solubility in GaP 3=10686
 diffusion and solubility in GaP 4=12790
 diffusion from vapour into GaAs 1=17565
 discontinuous yielding after prestrain 2=6738
 dislocation etch pits 0=20819
 dislocation etch pits on basal plane surface 1=14288
 dislocation generation in single crystals, effect of microsegregation 1=17534
 dislocation-loop climb 1=3669
 dislocation loops, electron microscope exam. 3=6525
 dislocation loops after plastic deform. 3=4873
 dislocation reactions resulting from slip 3=2797
 dislocation relaxation at low temp. 1=17535
 dislocation relaxation, in single crystals 0=17944
 dislocation sources at inclusions 4=25940
 dislocation structure, atom movements 2=3917
 dislocations, etch study 0=713
 dislocations and impurities in melt-grown crystals 1=19772
 dislocations, ion bombard. etching 4=1477
 dislocations, rel. to irradiation 3=20178
 dislocation loops during low-temp. pyramidal glide 1=10003
 dislocations, motion in whiskers and platelets 0=20808
 dislocations, non-normal direction 2=21024
 dislocations, revealing by etching 1=14961
 dislocations in single crystals, effect of annealing 2=14440
 dislocations, in plastically-deformed specimens, density anisotropy 4=1498
 dislocations prod. by spark discharge 3=12969
 distribution coeff. in GaAs 1=15143
 ductility and fracture due to cyclic stresses 2=21428
 elastic wave surface 1=5322
 elastic waves, reflection and refraction 1=4399
 elec. resistance, rel. to impurity 3=25324
 elec. resistance, 10°-14°K 3=2852
 electric conductivity for high purity, meas. analysis 4=12865
 electrical migration, current density depend. 1=14304
 electrical transfer, in AgZn 2=8247
 electrical transfer in Al, effective charge 2=10416
 electrode potential, strain-induced, of plated Cu wires in ZnSO₄ soln. 1=6571
 electrodeposition on Zn cathodes 2=15145
 electrolytic thermoelectric effect in Zn salt solns., and heat of reaction 4=7768
 electron emission, photostimulated, on reaction with NaOH or KOH 1=16376
 electron energy losses 2=2073
 electron energy structure, spin-orbit splitting 1=19737
 electron states, 3d, two-centre integrals 2=3862
 electron transition probabilities, to Brillouin zones 0=17915
 electronic structure, from acoustic data 3=10623
 electronic structure, calc. 0=9888
 embrittlement by liq. Hg 3=16006
 equations of state, at high pressure 0=11549
 etch figures 0=18331
 etch pits 0=556
 etching, cinephotomicrographic study 1=7844
 etching and dislocations on {1010} faces 3=10676-7
 etching, revealing basal-plane deformation 1=19794
 Ettingshausen—Nernst effect, 4.2°K, effect of pressure 0=13581-2
 evaporation rate, effect of sorbed gases 4=14466
 exo-electron emission 0=2383, 10937
 exo- and photoemission of electrons 1=16374
 fatigue by direct stresses 4=7466
 fatigue fracture, autoradiography 2=19015
 fatigue, slip processes correl. with hardening 3=20748
 fatigue straining, dynamic recovery 3=20749
 fatigue strength in bending, single and polycrystals 1=14922
 Fermi surface 3=25244
 Fermi surface area rel. to theory 1=19745

Zinc—contd

Fermi surface, magnetoelec. data 3=12945
 Fermi surface, pressure depend. 4=4023
 Fermi surfaces, open cross-sections 3=17687
 film on amorphous support, microstructure examination 2=10952
 film orientation on Cu substrate, orientation 1=10282
 films, electron probe meas. 0=10336
 films, 0.003-0.01 in. thick, density, porosity, pore size 2=2427
 films, oxidation kinetics, atmospheric corrosion 4=26748
 films, work function 2=9612
 foils, prep. as isotope targets 2=17978
 fracture, delayed, by cyclic unloading during extension 4=23228
 fracture mechanism, effect of surface-active metallic melts 1=20383
 fracture mechanism, effect of surface-active metallic melts 2=6751
 galvanomagnetic effects, isothermal, at low temp. 0=9944
 galvanomagnetic props., mag. breakdown effects 4=28539
 galvanomagnetic and thermomagnetic potentials at liquid He temp. 0=13581
 as Geiger—Müller cathode, work function 0=5438
 gettering effect on Si p-n junctions 0=18032
 glide systems, subsidiary 4=1919
 grain boundaries, low-angle, mechanical and thermal stability 1=11218
 growth of single crystals, effect of sound waves 3=6828
 growth of single hexagonal crystals in macrosonic fields, orientation 4=23351
 Hall effect, two vector component meas. 4=28538
 hardening curve, rel. to impurities 1=20367
 hardening curve, temp. effect 225°-344°K 1=20366
 hardening at liq. air temp., effect of impurities 2=10764
 hardness, micro, effects of electrons, alphas, with and without Sn 4=23229
 impurity substructure in crystals grown from melt 4=2095
 internal electric-field gradient, calc. 1=11143
 internal friction changes on heating 2=12843
 internal friction, dislocation damping theory 2=21406
 internal friction, effect of surface active Hg, Sn, Bi, Wood's alloy, Pb 2=21569
 internal friction, polycrystalline, and creep 3=18190
 ion emission, laser induced velo. var. with pulse height 4=19111
 ionization, multiple, by electron impact, 0 to 500 V 4=465
 ions in metal, mobility, effective charges 2=18609
 ions, Zn IV, spectrum 4=19967
 irradiation growth 2=20995
 lattice dispersion relns. of anisotropic system, by neutron scatt. 4=1381
 lattice vibr. spectrum by root sampling method 4=20194
 liq. and solid, diffusing in solid Fe 4=1515
 liquid, density, rel. to temp. 2=9255
 liquid flow, activation energy jumps and cluster formation 4=5137
 liquid, Hall effect 3=16636
 liquid, self-diffusion 4=5169
 liquid, self-diffusion in Sn plus Zn mixture 3=5432
 liquid, self-diffusion, temp. depend. 0=5008
 macromosaic structure, sandwich form 2=14451
 magnetic props., effect of elastic deformations, low temp. 0=1773
 magnetic susceptibility, 1.2-300°K 2=21291
 magnetoacoustic attenuation, de Haas—van Alphen oscillation 1=9014
 magnetoacoustic effect, parallel field, liquid He temps. 4=15422
 magnetoplasma resonance, l.f., meas. 3=8409
 magnetoresistance, dimensional and purity effects at low temp. 3=15554
 magnetoresistance, pressure depend., Fermi surface 4=4023
 magnetoresistance, transverse, and periodic mag. breakdown 3=20276
 mech. and phys. props., effect of cyclic heat treatment 0=4569
 mechanical props., elec. cond., structure, effect of Ga film 1=14910
 mechanical strength, of monocrystals, effect of Ga coating 0=1871
 mechanical strength, torsion, and tensile strength—endurance relation 3=18208

Zinc—contd

mechanical strength, variation with time and temp. 0=21149
 meteorites, abundance 3=11527
 microstructure changes, due to thermal cycling and external stress 4=13657
 molten, elec. resist. and Hall effect 3=9475
 molten, viscous flow, activation energy increase 4=155
 monocrystals, cathode disintegration anisotropy 3=7658
 monocrystals, slip, twinning and dislocations 1=14904
 nearest-neighbour force consts. rel. to elastic consts. 2=3818
 nucleation and twinning 1=14981
 optical consts. of single crystal, 0.6-5 eV meas. 4=20450
 optical props. of surface, effect of oxide 0=9075
 plastic deformation, crystal fragmentation and twinning 0=13909
 plastic deformation, initial 3=18181
 plastic deformation, with basal slip, dislocation distrib. 1=14880
 plastic deformation, without basal slip, temp. depend. 1=14879
 plastic deformation, mechanism 2=2327
 plastic deformation, and work hardening in Cd-doped crystals 4=30791
 plastic flow, surface removal effects 4=7430
 plasticity, irradiation, n , β , effects 4=1914
 plasticity, single crystals, temp. transition from brittleness 3=23316
 polycrystals, grain boundary and lattice diffusion 0=7901
 polygonization of bent crystals 1=11216
 polygonization in bent crystals, effects of solutes 2=8235
 positive ions, 5-25 keV, sputtering of Cu 1=8363
 positron annihilation in γ -ray ang. correl. 2=8194
 properties calc. from first princs. 3=8395
 properties and structure, changes at 120 and 180°C 0=13496
 range of 0.07-1.0 MeV Ga atoms 4=28505
 recovery after neutron irradiation, point defect processes 4=4102
 recrystallization and boundary migration 3=23407
 self-diffusion, in AgZn, temp. depend. 2=8247
 shear fracture of bi- and monocrystals 1=1309
 shear strength, -50° to 200°C, up to 10^8 kg cm⁻² 3=13375
 shear stress, critical, rel. to impurities 2=2318
 shock compression up to 9×10^8 atm 2=6728
 shock compression up to 9×10^8 atm 3=6786
 shock wave propag. 0=12453
 single crystals, dislocations by electric erosion 1=14282
 single crystals, dislocations by electric erosion 1=17531
 single crystals, fatigue-induced after-effect 1=20360
 single crystals grown by Bridgman method 1=20444
 single crystals, growth spirals and closed-loop patterns 4=17789
 single crystals, growth by zone recryst. from wire 3=5088
 single crystals, microhardness anisotropy 4=1955
 size effects, due to thermal cycling and external stress 4=13657
 slip lines in deformed single crystals 4=28991
 slip, multiple, active basal and pyramidal slip systems 0=13547
 slip, pyramidal 4=4493
 solid solubility (153-260°C) in Cu 2=15072
 solubility and distrib. coeffs. in GaAs and GaP 4=13458
 solubility in GaAs 3=16122
 in solution, motoelec. effect rel. to temp. 2=8923
 solution rate in Hg 4=5156
 sp. ht., in normal and supercond. states 0=8947
 spark discharge, ion concn., time variation 3=2553
 spark spectrum, wavelength shift meas. 1=3511
 specific heat 1=6075
 specific heat, anomalous, at liq. He temps. 2=10331
 specific heat, 1.3-4.2°K 1=3607
 spectra, in plasma, effect of metallic oxides 3=9812
 spectrochemical anal. 2=19177
 spin-orbit coupling in electron band structure 3=10626
 sputtering by Ar⁺, 1.2 MeV, preferential ejection 3=7656
 sputtering, deposit patterns 3=22877
 sputtering patterns, from 30 keV Ar ions 4=12828
 stacking faults 0=7887
 strain hardening of single crystals 2=14896
 strain recovery, nonelastic, meas. 3=8776
 strength and plasticity, rel. to surface-active melt and irradiation 4=10404

Zinc—contd

stress/strain effects, rel. to irradiation 3=18174
 structural and mech. props. rel. to liq. Ga coating 4=10353
 structure distortions 0=7879
 substructure microsegregations and critical shear stress 3=6792
 superconducting, absorption, u.s., and $2\epsilon_0$ 4=16477
 superconducting state, structure at critical temp. 0=18337
 superconducting, thermal cond., anisotropy 1=18724
 superconducting transition, supercooling and anomalous spec. ht. discontinuity 1=4533
 superconductivity crit. temp. decrease by Mn impurity 4=18566
 surface features of monocrystals 1=15173
 surface friction, wear rate and polishing 2=23795
 surface morphology, thermal evaporation 4=29179
 surface texture, effect on spreading of liquid Hg 3=5427
 tensile strength, combined effect of Hg and α , β and γ -irradiation 4=28989
 tensile strength of foil 2=19007
 tensile strength, rel. to β -irradiation 3=8781
 tensile strength, specimens coated with Zn-Sn, Zn-Cd and Zn-Pb, electron irradiation effects 4=23227
 thermal cycling effect on mechanical, elec. props. 2=23776
 thermal cycling effect on mechanical, elec. props. 3=3233
 thermal diffusivity, capacity and conductivity, meas. by flash method 1=13006
 thermal expansion, anisotropic, below 0°C 2=2056
 thermal expansion, 4°K to room temp. 4=15434
 thermal expansion rel. to crystal orientation 4=17377
 thermal vacancies, formation energy specific resist. 1=11192
 thermo e.m.f. in circuit of deformed and undeformed regions 1=7679
 thermocycling and recrystallization 1=12625
 thermoluminescence, electron traps rel. to activator conc. 1=14661
 thin films, effect of ultrasonics on structure 1=1450
 time-to-fracture, constant and cyclic stresses 4=23124
 torsional strength, long-term 2=12862, 14900
 trace element in Se, neutron activation chem. anal. 4=23692
 twinned, accommodation zone, X-ray diffract. study 0=12000
 twinned layers, load depend. 0=13936
 twinned, pits prod. by vacuum thermal etching 0=16286
 twinned single crystals, recovery 2=21465
 twinning, effect of various inclusions 1=4010
 twinning, structure of accommodation region 3=8801
 twins, wedge-shaped, props. of boundaries 4=10454
 u.s. absorption coeff., quantum oscillation 2=6264
 u.s. absorption coeff., quantum oscillation 3=2723
 u.s. absorption, 17-70 Mc/s, in mag. field, liq. He temps. 0=11576
 use in decoration of defects in NaCl 1=3677
 vacancies, energies of formation, movement 3=10646
 vacancies, formation energy and conc. 1=7575
 vapour, anomalous flow through Pyrex tubing 3=14195
 vapour, exchange with polycrystalline ZnO 1=9166
 vapour, in flames and inorganic cpd. vapours, anomalous excitation 4=9658
 vapour, mag. resonance of excited atomic levels 0=13880
 vapour, mixture with Hg, elec. discharges with negative optical absorption 0=19360
 vapour, multiple ionization, by Auger effect, meas. 4=11520
 vapour, selective reflection at 2139 Å 2=1199
 viscosity, temp. var., m. p. to 1000°C 4=5160
 whiskers, mechanical strength 1=20371
 whiskers, microcreep 1=1327
 whiskers, strength, dislocations and crack formation 1=1544
 work hardening, first-stage, orient. and temp. depend. 4=13453
 work hardening and fracture 3=18200
 work hardening props. of pure and doped crystals 4=20690
 work hardening, slip processes 1=6464
 work hardening, stage A, orient. depend. analysis 4=13454
 X-ray emission spectra, M-series 3=23088
 X-ray lines, K, from flash tube, meas. 4=20453
 X-ray spectra, L-spectra, in Cu-Zn alloys 0=13421

Zinc—contd

X-ray spectrographic study 0=13473
 zone refining 2=23825
 As content detm. by radiochemistry 3=1399
 in Sn, effect on structure and microhardness 3=3334
 in Sn recrystallized surface, effect on microhardness and structure 3=20760
 Zn diffusion in ZnO, 720° to 840°C 1=14320
 Zn monocrystals, amalgamated, brittle fracture 1=6471
 Zn I spectral lines, oscillator strengths 1=13953
 Zn II free ions, mag. dipole resonance 0=2715
 Zn VIII triplet at 160 Å 3=9593
 Zn²⁺, X-ray K-spectrum 0=7720
 Zn⁶⁵, diffusion rate in Cu, small penetration 3=13001
 Zn⁶⁷ atom, ³P state h.f.s. 2=14189
 Zn: Cd, elongated cells, dislocation densities 0=11620
 Zn: Cd, Zn: Cu, fibrous substructure, effect of impurities 0=18303

Zinc compounds

binary phosphate glasses, properties 0=21216
 alloys, impurity electronic structure 3=22757
 α -brass, grain boundaries, pore formation 2=3928, 8234
 α -brass, intragranular misorientation due to plastic strain 2=4507
 brass, mag. susceptibility, 1.2-300°K 2=21291
 dihalides, linear symmetrical, mean amplitudes of vibr. and Bastiansen-Morino shrinkage effect for T = 1000°K, 1250°K and 1500°K 4=30441
 "Electrofax", properties, review 0=4387-8
 emission band found in shock tube excitation 2=696
 ferrites, Cu substitution, heat capacity, Néel temp. 0=4498
 ferrites, mixed, permittivity, a.c. fields rel. to temp. 1=10081
 ferrites, mixed, permittivity in a.c. fields rel. to temp. 1=11329
 franklinite, neutron scatt., spin wave dispersion relation 1=20119
 hopeite, morphology, natural rel. to synthetic 4=13513
 silicate, Mn activated, decay of cathodoluminescence 3=3066
 ternary carbides, with Ni, Co, Fe, Mn 0=16324
 Tutton salts, VO²⁺ e.s.r. 4=20603
 willemite, fluorescence and phosphorescence 1=14639
 wurtzite, optically active lattice vibrations 4=12605
 zinc blende, elastic properties, model 1=20300
 zincblende, electro-optical effect 1=3825
 zincblende, space group selection rules 2=19065
 zincblende, structural stability under high-pressure 3=23375
 Ag-Zn alloys, transport numbers, various phases 3=11354
 (Ba,Sr)₂Zn₂Fe₁₂O₂₂ [Zn₂Y], magnetization process 1=6251
 CdS(Ag) emission bands 1=19978
 MnF₂-ZnF₂, optical absorption and anti-ferromagnetism 1=1162
 NiZn ferrites, Hall effect and semicond. props. 0=7935
 NiZn ferrites, magnetization, meas. using ferromag. resonance 1=1240
 NiZn ferrites, solubility of ferric oxide 0=21232
 NiZn ferrites, Young's mod. and internal friction 0=11971
 Zn acetate aq., u.s. absorption 3=3803
 Zn acetate, aq., u.s. velocity and absorpt. 2=11369
 Zn alloys, macromosaic structure, striations 2=14451
 Zn alloys with Mn, Fe, and Co, ζ -phase crystal structure 2=15046
 Zn amalgam, ultrasound velocity 2=7210
 Zn amalgams, viscosity and elec. cond. 1=11757
 Zn amalgams, viscosity, elec. cond., density 1=12872
 Zn antimonide, elec. transport props. 2=4042
 Zn-blende, fundamental reflectivity spectrum 1=17762
 Zn blende, optically active lattice vibrations 4=12605
 Zn borate, anhydrous, luminescence rel. to As, Sb, Bi impurities 2=6619
 Zn chalcogenides, ternary, photoelectric properties 1=11321
 Zn, dilute, elec. cond., low temp. anomaly 1=14364
 Zn ferrite, atomic displacement due to thermal agitation and local distortions 2=3913
 Zn ferrite, decay phenomena, rel. to domain walls 3=8689
 Zn ferrite, effect of grinding on coercive force 2=10664

Zinc compounds—contd

Zn ferrite, formation by explosive compression 4=4701
 Zn halide films, rapid prep. 0=14081
 Zn halides, aq., dissociation rel. to u.s. data 2=15152
 Zn halides in aq. soln., u.s. velocity rel. to conc. 1=1740
 Zn oxide, interstitial defect meas. by emanation method 4=22568
 Zn oxide, Mn-activated, red luminescence 0=10068
 Zn oxide, red luminescence 0=10068
 Zn oxide and rubber mixtures, permittivity 0=6151
 Zn oxide spheres, sintering, in air, O₂, H₂, He 0=1958
 Zn-rare earth alloys, crystal structure 4=10559
 Zn rhodamide, Pb activated, excitation, absorption and luminescence spectra 4=28739
 Zn sulphides, electron trap centre distrib. 0=13721
 Zn, with surface-active additions, phase precipitation 0=8269
 Zn titanates, dielectric properties rel. to neutron irradiation 1=12475
 Zn tungstate, growth, dislocations and crystallography 4=15477
 Zn-Al alloys, v.p. meas. by radioactive tracer dew point method 4=11412
 ZnAl, electron emission microscopy 3=20973
 Zn-Al, plastic deformation and phase transformations 0=16230
 Zn-Al system (40-75 at % Zn), phase transformations 4=23299
 ZnAl₂O₃, Mn²⁺ e.s.r. 0=3131
 Zn-Al, Zn-Mg, K-edge absorption 2=6590
 ZnAl₂O₄, solubility and crystal growth in molten PbF₂ 4=29614
 ZnAl₂O₄ spinel, containing Fe³⁺ ions, paramagnetic resonance 2=769
 Zn₃As preparation and properties 1=14462
 ZnAs₂ preparation and properties 1=14462
 ZnAs₂, semiconducting props. 1=2416
 Zn₃As₂, semiconducting props. 1=2416
 Zn-2% Au, crystal structure, rapidly solidified, regular cell pattern 3=23470
 ZnBaFe garnet, ferrimagnetic reson. linewidth reduction 4=13289
 ZnBeSiO₄, luminescence, field-stimulated, absence below 2 × 10⁵ V/cm 2=12629
 ZnBeSiO₄, luminescence of powders in elec. fields 2=14737
 ZnBr₂, aq. soln., u.s. velocity anomaly 1=15671
 ZnBr₂, bending vibrations and ionic model 2=14255
 ZnBr₂, electrolytic enrichment with Br⁷⁹ 0=11495
 ZnBr₂, heat contents, room temp. to 700°C 4=14156
 ZnBr₂, molten, self-diffusion of Zn²⁺ 2=11361
 ZnBr₂-nitrile complex, CN stretching freq. 2=14320
 ZnBr₂, vapour pressure and dimerization 4=11413
 ZnBr₂-KBr-H₂O u.s. vel. and adiabatic compression 2=17459
 Zn-Cd alloys, age-hardening 4=1965
 Zn-(0.2 to 0.5%) Cd, brittle fracture, rel. to surface phenomena, -200° to +200°C 4=10363
 (Zn, Cd, Hg)S, electroluminescence 0=16114
 Zn-Cd sulphide, luminescence, 0.75-1.2 μ , 4.2-77.4°K 4=1780
 ZnCdS, a.c. photocond. with blocking layers 2=21184
 ZnCdS:Ag, electroluminescence flashes, wavelength and pulse-width depend. 1=5059
 (Zn, Cd)S, Ag and Cu activated, optical props. 0=6161
 (Zn:Cd)S:Ag, 75: 25, luminescence, for temp. meas. 3=8622
 (Zn, Cd)S, complex dielectric permeability meas. 0=10010
 ZnCdS, luminescence rel. to activator 2=6614
 ZnCdS, luminescence, i.r. quenching 2=8555
 (Zn:Cd)S mixed crystal phosphors, emission band spectral displacement 2=4180
 Zn-CdS, Mn activated, α scintillation, magnification by elec. fields, temp. var. 4=30699
 (Zn-Cd)S, luminesc., activator chemistry 3=3051
 ZnCdS:Mn, luminescence intensification by electric fields 1=20015
 (Zn_{1-x} + Cd_x) S, Mn²⁺ e.s.r. wipe-out number 4=26370
 ZnCdS phosphor, electrophotoluminescence 2=10633
 (Zn,Cd)S phosphors, coactivator emission 3=10998
 (Zn,Cd)S phosphors, emission spectra, influence of activators 4=1781
 ZnCdS phosphors, trapped electrons, e.s.r. 3=23238
 ZnCdS phosphors, yield 2=6624

Zinc compounds—contd

- (Zn, Cd)S, photodielec. props., powder layers 0=6158
 ZnCdS, photovoltaic effects, positive hole motion 1=12464
 (Zn, Cd)S, temp. depend. of luminescence 0=1062
 ZnCdS, trapping centre conc. determ. 2=23607
 (Zn, Cd)S, X-ray luminesc., elec. field and i.r. effects 2=14736
 (Zn, Cd)S:Ag, luminescence, rel. to CdS concn. 0=2959
 (Zn, Cd)S:Ag, luminescence efficiency 0=16091
 Zn—CdS:Ag, luminescence peaks at 0.04 eV and 0.19 eV 2=12629
 ZnCdS:Ag phosphor, Gudden-Pohl effect 2=12628
 (Zn, Cd)S:Ag, fluorescence 0=16096
 (Zn, Cd)S:Cu, candoluminescence and luminescence 0=10052
 (Zn, Cd)S:Cu, Cl, preparation and electroluminescence 0=16110
 (Zn, Cd)S:Cu phosphors, electroluminescence, emission range extension 4=1783
 ZnCdS:Cu and Ag, luminescence 2=6615
 (Zn, Cd)S:Cu phosphors, crystal structure, atomic, X, γ -ray effects 3=23457
 ZnCdS:Mn, elec. field enhancement of u.v. luminescence 2=12626
 ZnCdS:Mn, luminesc., prior sensitization 3=10994
 ZnCdS:Mn, luminescence, by X-rays a.c. components prod. by 10^4 V/cm at 400 c/s 3=15710
 ZnCdS—Mn, luminescence, enhancement by electric field 3=6673
 (Zn, Cd)(S, Se), red-emitting electroluminesc. 3=13217
 Zn—Cd—Sb, liquid, electrical resistivity study of short-range order 1=5284
 Zn_xCd_{1-x}Sb, i.r. absorption pleochroism 3=923
 Zn_xCd_{1-x}Sb, Seebeck coeff. 2=23487
 Zn_xCd_{1-x}Sb, semiconducting props. 4=12918
 Zn_xCd_{1-x}Sb, single crystals, preparation 1=20433
 Zn_xCd_{1-x}Sb solid solns., elec. and optical props. 2=23415
 Zn_xCd_{1-x}Sb solid solns., structure 2=23889
 (Zn, Cd)Se, photocond., spectral response 0=15996
 (Zn, Cd)(Se, S) base, luminor electroluminescence props. 4=22925
 ZnCl₂, α - and β -phases, structure 0=1908
 ZnCl₂ amine complex, structure, moments 3=15358
 ZnCl₂, aq. soln., freezing 3=3927
 ZnCl₂, bending vibrations and ionic model 2=14255
 ZnCl₂ fused mixtures with LiCl and KCl, complex ions 4=183
 ZnCl₂, fused, refractive index rel. to temperature 3=11796
 ZnCl₂, geometry and bonding, from deflection in elec. field 4=22378
 ZnCl₂, glass forming, liquid structure 0=14626
 ZnCl₂, heat contents, room temp. to 700°C 4=14156
 ZnCl₂, ionic melt, transport numbers and temp. depend. 2=15144
 ZnCl₂, molten, shear and structural relaxation 4=11176
 ZnCl₂ phosphor, sulphide activated 3=950
 ZnCl₂ solutions, Raman spectra 4=5184
 ZnCl₂, vapour pressure and dimerization 4=11413
 ZnCl₂—KCl—H₂O u.s. vel. and adiabatic compression 2=17459
 Zn—Cr, magnetoresistance at liq. He temps. 2=3991
 Zn—Cu alloys, corrosion, by NH₃-containing atmosphere 3=8953
 Zn—Cu liquid alloys, thermodynamic and structural props. 4=24203
 Zn with Cu, spectrochemical analysis, in discharge, effect of Si, Na, time var. 3=25845
 Zn₂Cu(AsO₄)₂ (stranskiite), structure and refractive index 1=4058
 Zn_{0.95}Cu_{0.05}K₂(SO₄)₂·6H₂O, e.s.r. spectrum 0=4510
 ZnD, far u.v. band system 2=20824
 ZnF₂, e.s.r. of Mn²⁺ impurity, F¹⁹ super-h.f.s. 0=6272
 ZnF₂, e.s.r. of Ni²⁺, V³⁺ and Cr³⁺ 0=10233
 ZnF₂, fused bath, electronic & ionic conductance, 1100°C 3=1394
 ZnF₂, geometry and bonding, from deflection in elec. field 4=22378
 ZnF₂, growth of highly-perfect single crystals for masers 3=23397
 ZnF₂, lattice thermal cond. 2=16616
 ZnF₂, Mn²⁺ e.s.r. in 1=3936
 ZnF₂, thermal cond., rel. to phonon-spin interactions 2=23082

Zinc compounds—contd

- ZnF₂, thermal cond., 3-300°K 1=8889
 ZnF₂, thermal expansion, from crystal structure, atomic, temp. var. 4=9863
 ZnF₂, molecular vibrational consts. 4=28232
 ZnF₂:Mn, crystal growth 0=21163
 ZnF₂:U, luminescence, line spectrum, 77°K 1=2455
 (Zn_{1-y}Fe_y)Fe₂O₄, ferromagnetic crystalline anisotropy 1=14696
 ZnFe₂O₄, grain growth and structure 2=4479
 ZnFe₂O₄, sp. ht., 1.8-20°K 2=571
 ZnFe₂O₄, superparamagnetism, induced by high-pressure squeezing 4=26275
 (ZnFe₂O₄)_{1-y}(Fe₃O₄)_y, electrical conductivity 1=12425
 ZnFe₂O₄—NiFe₂O₄ system, superparamagnetism 3=8645
 Zn—GaAs, distribution coeff. of Zn 1=15143
 ZnGa₂O₄, spinel structure 1=15093
 ZnGeAs₂, conductivity, thermal 100-700°K and order-disorder transform. 3=20118
 ZnGeAs₂, solubility of Ge, X-ray, thermal obs. 4=4496
 ZnGeAs₂, thermoelec. power, resist., Hall const., thermal cond. and diffusivity 3=8518
 ZnH, far u.v. band system 2=20824
 (Zn, Hg)S, electroluminescence 0=16114
 Zn(Hg):Zn²⁺ aq., electrolytic Peltier effect rel. to inactive ions 2=17089
 ZnI₂—nitrile complex, CN stretching freq. 2=14320
 ZnI spectrum, h.f.s. and intercombination lines 2=16480
 ZnI₂—KI—H₂O u.s. vel. and adiabatic compression 2=17459
 ZnIn spectrum 4=30440

 Zn(NH₄)₂(SO₄)₂·6H₂O, impurity distrib. during crystallization 4=29062
 Zn(NO₃)₂·6H₂O, volume changes, anomalous, rel. to thermal cycling, down to -180°C 4=10424
 ZnNi ferrite, permeability and domain walls 1=20139
 ZnNi ferrites, ferromagnetic relaxation 1=17973
 (Zn—Ni)SiF₆·H₂O mag. props. below 1°K 2=10650
 ZnO, absorpt. bands, dispersion shift 2=23565
 ZnO, absorption edge, press. depend. 0=4408
 ZnO, action of 2-10 kV electrons 0=1162
 ZnO, activation energies for diffusion 1=12398
 ZnO, adsorption of O₂ 4=10623
 ZnO, adsorption process, effect of γ -rays 2=12949
 ZnO, adsorption rates of CO 0=752
 ZnO aerosol, precip. in acoustic field 2=23974

Zinc compounds—contd

ZnO, aerosols, precipitation, by l.f. spiral acoustic field 3=18462
 ZnO, α -scintillations, low temp. depend. 0=10078
 ZnO, average electrom. brightness voltage depend. 4=22912
 ZnO, chemisorption of H_2 and CO 2=8916
 ZnO, chemisorption of O_2 , effect of u.v. irradi., rel. to model as n-type semiconductor 0=8303
 ZnO, conductivity rel. to donor conc. 1=19886
 ZnO, crystal growth by heating ZnF_2 in air 2=4383
 ZnO, crystal perfection, studies by X-ray intensities 4=22593
 ZnO crystal, polar props. perpendicular to c-axis 4=6680
 ZnO, crystallographic polarity 3=11259
 ZnO, Cu^{2+} substit. impurity, wave functions 4=4042
 ZnO, dielec. const. 0=7973
 ZnO, diffuse reflectance absorpt. spectrum 3=13190
 ZnO, diffusion of Zn^{65} and O^{18} in, solubility of Zn for vapour 1=2395
 ZnO, dipolar absorption studies 1=14535
 ZnO, donors and acceptors, e.s.r. 3=13309
 ZnO, donors, paramagnetic resonance 1=20240
 ZnO, doped with Li, Ni, Cu, luminesc. 3=23111
 ZnO, double acceptor luminescence 3=15704
 ZnO, e. s. r. of photosensitive Ni 4=13323
 ZnO, "edge" and green luminescence emission rel. to elec. cond. 3=3048
 ZnO, effect on Bi_2O_3 polymorphism 4=23253
 ZnO, effect of light on contact potential 0=1626
 ZnO, elastic moduli of single crystals 3=1213
 ZnO, elec. cond., effect of illumination and adsorption 2=16759, 18753
 ZnO, elec. cond., Hall effect 2=2117
 ZnO, elec. cond., pressure depend. 0=6085
 ZnO, electrical cond. 0=2849
 ZnO, electrical dark conductivity and green luminescence 1=11311
 ZnO, electrodes, charge and potential distributions 0=13618
 ZnO electrodes in electrolytes, surface charge distribution 1=1484
 ZnO, electroluminescence 4=1764
 ZnO, electroluminescence rel. to applied voltage 2=21282
 ZnO, electroluminescence, effect of u.v. and gas adsorption 0=16116
 ZnO, electroluminescence meas. 3=18048
 ZnO, electroluminescence, with rectifying contacts 2=23622
 ZnO, electroluminescence and surface props. rel. to adsorbed gases 2=16853
 ZnO, electron density distrib. 1=20538
 ZnO, electron paramagnetic resonance, photo-induced 3=6751
 ZnO, electrophotographic, charging in discharge 4=18443
 ZnO, electrophotographic latent image formation and decay 3=5544
 ZnO, electrophotographic props. 3=9629
 ZnO, excitons and absorption edge 1=17477
 ZnO, exciton spectrum, from u.v. absorption and reflection 1=19982
 ZnO, Fe^{57} n. m. r., meas. and theory 2=12820
 ZnO, field effect mobility, effect of O_2 , N_2 , and light 2=16733
 ZnO films, adsorption and desorption, rel. to irradi. 3=6896
 ZnO films, luminescent, sublimation 3=16144
 ZnO, films, photoconduction sensitization with eosin 4=15570
 ZnO, glass, Young's modulus rel. to refr. index, ht. effect 4=22864
 ZnO, H_2 chemisorption, temp. dependence 0=750
 ZnO, high-pressure polymorph 3=3254
 ZnO, high temp. induced e. s. r. signals, u. v. sensitive centres 4=30739
 ZnO, higher order i. r. absorpt., spectra, 5-33 μ , 4=28714
 ZnO, hydrothermal crystal growth 4=20737
 ZnO, i. r. absorption, calc. 1=14607
 ZnO, i. r. absorption and electrical conductivity 0=654
 ZnO, i. r. absorption, 1-13 μ 0=2945
 ZnO, i. r. reflection spectrum 0=11767
 ZnO, i. r. spectrum and adsorption of CO_2 0=8002
 ZnO, large crystal growth 1=2525
 ZnO, latent electrophotographic image, formation 2=15756, 19733

Zinc compounds—contd

ZnO, lattice parameters, effect of thermal history 4=23500
 ZnO, luminescence and absorption 3=957
 ZnO, luminescence and cond. elec., effect of absorbed O 3=6679
 ZnO, luminescence due to 9 kV electrons 0=6202
 ZnO, luminescence, edge emission, tight binding model 0=2956
 ZnO, luminescence, effect of Cu activation 3=20524
 ZnO, luminescence quenching 2=16852

 ZnS, u.v., visible and luminescent spectra at 4.2°K, rel. to excitons 2=14672

Zinc compounds—contd

- ZnS, use in dielec. multilayer 4=21291
 ZnS, vacancy concn., Dember effect meas. 3=20161
 ZnS, valence band structure, quasi-cubic model 1=19983
 ZnS, vapour-phase grown, stacking faults 2=6354
 ZnS, vapour-phase growth, structure 1=2524
 ZnS, whiskers, mechanical strength 1=20371
 ZnS, wurtzite and blende type, phonon interactions 4=25837
 ZnS, wurtzite form, elastic moduli 3=18159
 ZnS (wurtzite), i.r. absorption, calc. 1=14606
 ZnS, wurtzite type crystal excitons and absorption, light, anisotropy 4=4278
 ZnS, zinc blende, bond character rel. to SiC and A^{III}B^Vcpds. 3=2688
 ZnS, Zn separation by u.v. photolysis 2=4553
 ZnS:Ag, α -scintillations, low temp. depend. 0=10078
 ZnS:Ag, with B coactivator, prep. and spectrum 2=10625
 ZnS:Ag, c.r.t. screens 0=18149
 ZnS:Ag, Debye-type relaxation 2=8460
 ZnS:Ag, In, luminescence, effect of CdS addition 0=11784
 ZnS:Ag, ion irradi; excitation and deterioration 1=9002
 ZnS:Ag, luminescence, behaviour of excited electrons and holes 1=5054
 ZnS:Ag, luminescence decay props. for α and γ -ray excitation 0=21009
 ZnS:Ag, luminescence efficiency 0=16091
 ZnS:Ag, luminescent efficiency in electron diffractometry 2=10955
 ZnS:Ag, luminescence emission shifts 3=8625
 ZnS:Ag, luminescence excitatn. by ions 3=970
 ZnS:Ag scintillators, crystal parameters 4=21699
 ZnS:Ag:MgCl₂, thermoluminescence and temp. quenching 0=4461
 ZnS:Ag:Mn, luminescence rel. to electron or optical excitation intensity 0=21010
 ZnS:Ag, Ni, cathodoluminescence, rel. to preparation materials 2=23616
 ZnS:Ag phosphor, Dy, Sm, Gd, B loaded, neutron determ. 2=20361
 ZnS:Ag, thermoluminescence 2=23623
 ZnS:Ag, as X-ray screen coating 2=14735
 ZnS:Ag+(Zn, Cd)S:Ag, adherence 2=6617
 ZnS:Ag, ZnS:Ag, Ni, luminescence rise and decay 0=659
 ZnS:Al, Cu, electroluminescence of single crystals 2=6641
 ZnS:Al, luminescent centre e.s.r. 3=8717
 ZnS:Al²⁺, e.s.r. correl with photocond. meas. 3=18128
 ZnS:Au, luminescence emission shifts 3=8625
 ZnS, CdS:Ag, luminesc., effect of high pressures 2=21271
 ZnS, CdS:Ag, as X-ray screen coating 2=14735
 ZnS-CdS, Cu-activated, reaction enthalpy 3=6678
 ZnS-CdS phosphors, energy levels from luminesc. data 2=10626
 ZnS-CdS, photocond., 3400-5100 Å 2=6502
 ZnS-CdS, structure and electroluminescence 1=9012
 ZnS-CdS:Cu, luminescence change due to adsorption of H 4=7193
 ZnS:CdS-Cu, luminescence radical-recombination, rel. to elec. field 2=21272
 ZnS, CdS:Cu, Ag, photodielectric effect 2=6518
 ZnS, CdS:Cu:Ag, photodielectric properties 1=7686
 ZnS-CdS:Cu:Ag photodielectric effect, theory 4=30647
 ZnS:CdS:Mn, α -ray luminescence, effect of elec. fields 1=14656
 ZnS:CdS:Mn, luminescence due to α -rays and a.c. field 1=14655
 ZnS:CdS:Mn, various effects in luminescence 2=728
 ZnS-CdS-Mn, Mn²⁺, excitation bands 3=6676
 ZnS, CdS: Mn, X-ray luminescence, a.c. field enhancement 1=3862-3
 ZnS-CdS-NaCl 2%, luminescence emission bands 2=716
 ZnS:Cl cubic crystals, fluorescence 2=4178
 ZnS:Co, Ag, luminescence, flashlike rise 1=20016-17
 ZnS:Co, luminescence, flashlike rise 1=20016-17
 ZnS:Co, optical quenching, thermal activation energy 2=16855
 ZnS:Cu, a.c. depolarization, electroluminescence 1=2463
 ZnS:Cu, α -irradiated, luminescence decrease 2=4166
 ZnS:(Cu, Ag or Al), crystalline transformations 0=11998
 ZnS:Cu, Al, action of elec. fields 0=4248
 ZnS-Cu, Al, Cl phosphors, role of holes in electroluminesc. kinetics 4=26251
 ZnS:Cu, Al, (20 wt%Cu), electroluminescence pulses 2=16869

Zinc compounds—contd

- ZnS:Cu:Al, electroluminescence 2=6645
 ZnS:Cu, Al, electroluminescence, polarization 0=16109
 ZnS:Cu, Al phosphor, anomalous storage of light sums 4=22927
 ZnS:Cu:Al phosphor, initial stages of electroluminescence 2=6646
 ZnS:Cu(Cl,Br,I), electroluminescence 3=11009
 ZnS:Cu, Cl, electroluminescence, temp. depend. 3=11013
 ZnS:Cu, Cl, electroluminescence 2=16872
 ZnS:Cu, Cl, electroluminescence, effect of elec. contact 2=8592
 ZnS:Cu, Cl, growth 2=16987
 ZnS:Cu/Cl, luminescent and elec. props. 2=2253
 ZnS:Cu, Cl, photoconductive effect, impedance changes 3=911
 ZnS:Cu, Cl, preparation and electroluminescence 0=16110
 ZnS:Cu, Cl, stacking faults and electroluminescence 3=23123
 ZnS:Cu, Cl, structural transformations 4=10445
 ZnS—Cu, Cl(Al), temp. depend. of electroluminesc. intensity 4=28717
 ZnS:Cu, Co, electret effects 2=6530, 8472
 ZnS:Cu:Co phosphor, i. r. sensitivity 2=12627
 ZnS:Cu:Co phosphor, photodielec. effect 2=14604-5
 ZnS:Cu, Co, phosphorescence decay rel. to temp. and electron-trap filling 2=16856
 ZnS:Cu, containing Nd or Eu, electroluminescence and photoluminescence 0=6206
 ZnS:Cu, conversion of green to blue centres 3=25488
 ZnS:Cu crystals, electroluminescence 1=17920
 ZnS:Cu, current carrier trapping, thermal activation 2=16878
 ZnS:Cu, Debye-type relaxation 2=8460
 ZnS:Cu, dielec. const. and electroluminescence, Cu conc. depend. 2=18882
 ZnS:Cu, effect of i. r. radiation on luminescence 1=14641
 ZnS:Cu, effect of small electric perturbation 1=17921
 ZnS:Cu, elec. and electroluminescence props. 3=20345
 ZnS:Cu, electroluminescence 0=1764, 10080
 ZnS:Cu, electroluminescence 2=8554, 16870
 ZnS:Cu, electroluminescence 3=11016
 ZnS:Cu, electroluminescence, avalanche processes 3=18049
 ZnS:Cu, electroluminescence, avalanche processes 3=11014
 ZnS:Cu, electroluminescence, blue and green bands 2=6643
 ZnS:Cu, electroluminescence rel. to Cu diffusion temp. 3=15723
 ZnS:Cu, electroluminescence, definition of pot. barriers responsible 4=4308
 ZnS:Cu, electroluminescence, effect of u. s. waves at 0.68 Mc/s 1=1189
 ZnS:Cu, electroluminescence, effect of u. v. irradiation 0=2964
 ZnS:Cu, electroluminescence, excitation freq. var. 4=22928

 ZnSe-HgSe solid solutions, lattice parameter rel. to Zn concentration 4=15798
 ZnSe: V, 2μ fluorescence, excitation spectra 0=13715
 $ZnSiF_6 \cdot 6H_2O$, e. s. r. of Fe^{2+} 2=16932
 $ZnSiF_6 \cdot 6H_2O$, paramag. resonance of Mn^{2+} in 0=18220
 $ZnSiF_6 \cdot 6H_2O$, V^{2+} paramag. resonance 1=3928
 Zn_2SiO_4 , liquids and glasses, crystallization 4=23353
 Zn_2SiO_4 , luminescence, field-stimulated, absence below 2×10^5 V/cm 2=12629
 Zn_2SiO_4 , luminescence of powders in elec. fields 2=14737
 $ZnSiO_3$: Mn fluorescence quantum efficiency 1=12506
 $ZnSiO_3$: Mn, luminescence 0=4453
 Zn_2SiO_4 : Mn, luminescence peaks at 0.25 eV 2=12629
 Zn_2SiO_4 : Mn, c.r.t. screens 0=18149
 Zn_2SiO_4 : Mn, coated with Al, cathodoluminescence 0=11789
 Zn_2SiO_4 : Mn, synthesis flux effects with KCl or $LiSO_4$ 4=10211
 Zn_2SiO_4 : Mn, trapping centres rel. to luminescence 3=13209
 Zn-Sn, lamellarspacing rel. to freezing velocity 4=8503
 Zn-Sn, liq., density rel. to temp. 2=9255
 Zn-Sn monocrystals, growth by zonal recryst. from wire 3=5088
 $ZnSnAs_2$, conductivity, thermal, 100-700°K and order-disorder transform 3=20118
 $ZnSnAs_2$, crystal structure 0=8224
 $ZnSnAs_2$, crystal structure, chalcopyrites or zincblende? 3=11287
 $ZnSnAs_2$, evaporation, mass spectrometric study 1=19672
 $ZnSnAs_2$, p-type, elec. props., 80°-600°K 4=30629
 $ZnSnAs_2$, structure, elec., thermal props. 2=23417
 $ZnSnAs_2$, thermoelec. power, resist., Hall const., thermal cond. and diffusivity 3=8518
 Zn-Sn-Bi system, miscibility gap, calc. from thermodynamic functions 1=142

Zinc compounds — contd

- Zn-Sn-Pb thermodynamic determination of miscibility gap 1=6529
 ZnTe, absorption edge press. depend. 0=4408
 ZnTe bound excitons 3=10630
 ZnTe, carrier mobility and shallow impurity states 3=10843
 ZnTe, cleavage plane 2=8776
 ZnTe, crystal structure 2=8829
 ZnTe crystals, growth and decoration 3=16049
 ZnTe diodes, injection luminescence meas. 4=28747
 ZnTe, e. s. r. of $3d^5$ config. of Cr^{+} 4=13312
 ZnTe, electroelastic props., meas. and model 3=8556
 ZnTe, fluorescent band-edge emission 2=8573
 ZnTe, γ -ray induced conductivity 3=2908
 ZnTe, i.r. absorpt. edge. 2=8529
 ZnTe, lattice distortion by Mn^{2+} , e. s. r. det. 3=25167
 ZnTe, mirror absorption and fluorescence 2.58°-4.2°K 2=16861
 ZnTe, Mossbauer effect with Te^{129m} source 3=2367
 ZnTe, opt. and photoelec. props. 0=13671
 ZnTe, optical absorption 2=14679
 ZnTe, optical transitions, direct and phonon-assisted 3=10968
 ZnTe, p-type, electroluminescence, by minority carrier injection 4=28746
 ZnTe, p-type, i.r. rel. to photon energy 2=21251
 ZnTe, phase transition due to pressure 2=16705
 ZnTe, photoelectric emission, asymmetries 2=7644
 ZnTe, polymorphism 1=4006
 ZnTe, reflection and luminesc. spectra 3=25467
 ZnTe, reflection peaks near exciton line 4=705
 ZnTe, reflectivity and band structure 3=17979
 ZnTe, refractive index 4=13061
 ZnTe, resistance and Hall coeff. 3=25374
 ZnTe, solubility in CdS 3=4886
 ZnTe, surface props. of (111) and ($\bar{1}\bar{1}\bar{1}$) faces, asymmetries 2=7644
 ZnTe, thermal expansion, 20°-340°K 4=1404
 ZnTe in Zn vapour, high-temp. cond. 4=17496
 ZnTe: Al, Zn^{2+} , crystal vacancy trapped hole, e. s. r. obs. 4=30556
 ZnTe-CdS heterojunctions, growth and props. 3=23419
 ZnTe-CdS heterojunctions, I-V characteristics 1=14483
 ZnTe-CdTe, film formation and semicond. props. 2=21157
 ZnTe-CdTe, film formation and semicond. props. 3=2882
 ZnTe-CdTe, liquid phase diagram, dissociation, from elec. cond. 4=11185
 ZnTe-HgTe solid solutions, lattice parameter rel. to Zn concentration 4=15798
 ZnTe: Mn, spin resonance, 3a cubic fld. splittings 3=1192
 $ZnTiO_3$, dielectric losses, under irradiation 1=19926
 $ZnTiO_3$, dielectric losses, under irradiation 2=4096
 Zn-Tl(0.1%), crystal dislocations, etching polishing obs. 4=28472
 Zn-Tl, phase diagram at low Tl concentrations 1=9147
 $ZnWO_4$: Cr^{3+} , e. s. r. and spin-lattice relax. 3=25569
 $ZnWO_4$, e. s. r. of Cr^{3+} 3=3169
 $ZnWO_4$, e. s. r. of Fe^{3+} 4=30734
 $ZnWO_4$, growth of single crystals for e. s. r. studies 0=6265
 $ZnWO_4$, luminescence decay time, ion excitation 0=1756
 $ZnWO_4$, luminescence decay rel. to traps 2=6613
 $ZnWO_4$: Fe^{3+} , e. s. r. and spin-lattice relax. 3=25569
 Zn_2Y , spin-wave excitation in parallel pumping 3=15885
 (ZnY) ($Ba_2ZnFe_{12}O_{22}$) ferrite, linewidths and high-power props. of single-crystal spheres 4=7316
 ZnY_2 , acoustic wave instabilities 4=13255
 Zn_2Y , resonance props. 2=14818

Zirconium

- adsorption of Br^- and SO_4^{2-} , Zr surface treatment effects 4=13696
 adsorption of phosphate ions, P^{32} tracer meas. 4=4677
 α -particle range in, 4.5 MeV 0=9446
 anodic film, structure 3=23507
 arc zone melting, purification 0=8169
 atom, spectrum, isotope shift meas. 4=1219
 β - α transformation, habit planes and orientation 0=16312
 cold-work recovery rel. to neutron irradi. 3=11171
 corrosion in HBr, effect of α -rays 0=12100
 creep, meas. under 4-26 kg/cm² at high temps. 4=13455

Zirconium—contd

crystal dislocations, regrouping on phase transformations, β to α 4=1486
 crystal electron Fermi surface cellular approx. 4=28418
 crystal twinning, deformation, on {1121}, possible double process 3=20779
 crystal twinning, {1121}, α Zr 4=7531
 crystals, twinning, zig-zag 3=11214
 crystal whisker growth, by h.c.p. - b.c.c. phase transform. cycling 4=13554
 crystal zone purified, elec. cond., recrystallization temp. 4=17790
 damping peak at low temp. 4=26533
 data manual, phys., mech., chem., and irradiation props. 2=22875
 de Haas-van Alphen effect, up to 190 kG 3=25502
 deuteron scatt., 11.8 MeV, elastic and inelastic 3=17490
 diffusion coeffs. for H in β -Zr 4=1522
 diffusion, self, thermal, high temps. 3=22828
 diffusion, thermal of O and N 1=14326
 diffusion of Zr⁹⁵ and Nb⁹⁵ 4=6881
 dislocation movement, electron microscope obs. 2=21039
 dislocations in deformed Zr 3=10674
 dislocations, rel. to impurities 3=17745
 elastic constants and spec. heat, 14-300°K 0=21103
 elastic moduli, adiabatic 2=4306
 electrical resistance up to 250000 kg/cm² rel. to polymorphic transformation 2=618
 electrode, oxidized, mechanism of rectification 1=20747
 electron arc, as i.r. source, spectral charact. 2=17632
 electron band structure 2=20964
 electron emission due to Ar⁺ bombardment 3=9843
 electron emission, filament temp. 3=14629
 electron energy losses 2=2073
 electron secondary emission 2=3077
 equations of state, at high pressure 0=11549
 films on Cu substrates, nuclear target, preparation 4=16717
 films, oriented, oxidation 4=26715
 films sprayed, ultralow pressure prod. by gas sorption 2=19628
 films, on W, emission props., and microstructure 2=2428
 foils, nuclear targets, reducing Mo impurity 4=3233
 foils prep., as isotope targets 2=17978
 grain boundary absorption, superhighplasticity 1=14883
 interdiffusion with Al 4=28478
 internal friction, cold-worked metal 2=21407
 ions, hot, from U fission, exchange with ZrCl₄ 3=21006
 irradiation growth 2=20995
 Lamb wave propagation 1=10559
 lattice stability, b.c.c. and h.c.p. modifications, free energy difference 0=15800
 liquid, surface tension meas. 4=2643
 magnetoelectric props., 4.2-78°K, up to 27 kOe 0=11661
 mechanical props., effect of internal irrad. 4=4494
 mechanical strength increase by dispersing La₂O₃, Y₂O₃, 1200°F 4=13456
 in molten U, diffusion 0=3515
 neutron absorption cross-section meas. 2=6035
 neutron irrad., relaxation strains 3=20717
 oxidation, high temp., in O₂ and H₂O 4=15254
 oxidation, surface temp. increase 4=23641
 oxygenated, elec. resistivity, temp. depend. 2=3983
 phase change, resistivity effect 2=4451
 phase transformation, β to α , crystal dislocation regrouping 4=1486
 phase transformation, calorimetric meas. 2=21548
 phase transformation, internal friction study 2=21544
 phase transformations, solid-solid, 0-90 kbar 3=20887
 photovoltaic effect at low temps. 3=15636
 point defects, prod. by low-temp. plastic deformation, mobility 1=12380
 positive ions, 5-25 keV, sputtering of Cu 1=8363
 preparation and ductility, by iodide refining 2=21480
 reaction kinetics, in dry air, at high temps. 0=12102
 reaction temp. of metal with water 2=4540
 recrystallization texture, Zr wires 2=4472
 resolidified drops, voids 1=20631
 rolling and recrystallization texture 2=4363
 secondary-ion emission, under H₁⁺, H₂⁺, H₃⁺, He⁺, C⁺, N⁺, Cl⁺, A⁺, Mo⁺, 10-100 keV 2=220, 22273
 self-diffusion 1=6115
 self-diffusion 1=17567

Zirconium—contd

self-diffusion, anomalous, in b.c.c. phase 4=1520
 self-diffusion, effect of Fe and Ni impurities 1=6116
 sheet, deformation and strength anisotropy 2=10746
 shock wave propag. 0=12453
 single crystals, Nb⁴⁺ e.s.r., 77°K 4=1883
 single crystal elastic moduli and h.c.p. \rightarrow b.c.c. transformation 4=26530
 solubility in Be, X-ray diffract. study 3=20908
 solubility in solid α -Th 2=4474-5
 solubility in solid Mg 2=17056
 specific heat, 1.1°-4.5°K 3=15437
 spectrochemical analysis 2=19177
 strength rel. to crystal structure change 4=28960
 superconductive temp. controller, below 1°K 3=1880
 superconductivity, effect of press. up to 24 000 atm 4=18623
 superconductivity, press. induced polymorph 4=16378
 supercond. transition temp., effect of Fe in dilute solutions 1=3882
 target, Zr on Cu and Ag base-layers 2=17979
 thermal cycling growth 2=23883
 thermodynamic functions at high temps. 4=3989
 thin films evaporation and deposition for tritium targets 0=8280
 thin films, oxidation 4=4696
 trace impurities of Ca, Ti and Al, spectrochemical determ. 2=23983
 X-ray absorpt. spectra, K 1=17905
 Young's modulus data, rel. to temp. 4=30788
 zone melted, elec. cond. at liq. H and liq. H temp. 0=562
 Fe diffusion in, temp. depend. 4=15498
 H₂ sorption, at low pressures 0=6427
 Zr-T target, deuterium ion bombarded, neutron prod. 2=7875
 Zr³⁺ e.s.r. in glass, 450-9320 Mc/s, 77°-295°K 3=20660
 Zr⁹⁵ fission product ions, diffusion in UO₂ 2=6377
 Zr⁹⁵-Nb⁹⁵ pair, analysis by β - γ coincidences 3=5990

Zirconium compounds
 alloys, diffusion of H, heat of transport 4=6880
 Zr alloys, dilute, specific heat 1.2°-4.5°K 3=25199
 alloys, effect of irrad. on mech. props. 4=4494
 Zr alloys, self-diffusion 1=6115
 alloys, superconductivity 3=16873
 alloys, yield strength and ductility rel. to n-irrad. 2=23765
 borides and carbides, thermoelec. power with Cu 1=12465
 Zircaloy, dimensional changes during annealing in temp. gradient 4=20691
 Zircalloy, high temp., in O₂ and H₂O 4=15254
 Zircaloy-2, α - β transformation 4=7520
 Zircaloy-2, cold-work recovery rel. to neutron irrad. 3=11171
 Zircaloy-2, diffusion of H, thermal, theory 4=6882
 Zircaloy-2, H content rel. to Hall effect 2=14501
 Zircaloy-2, heat treatment effects at high temps. 4=26534
 Zircaloy-2, hot-worked, structure changes 2=4460
 Zircaloy-2, hydrogen diffusion 0=18406
 Zircaloy-2, hydrogen distribution and heat of transport 1=20581
 Zircaloy-2, neutron absorption cross-section meas. 2=6035
 Zircaloy-2, Ni-enriched, hydrogen absorption 0=8332
 Zircaloy-2 and other alloys, data manual 2=22875
 Zircaloy-2, reaction kinetics in air, at high temps. 0=12102
 Zircaloy-2, reduction of corrosion and hydrogen embrittlement 4=10994
 Zircaloy-2, tensile props., effect of neutron irradiation 1=20379
 Zircaloy-2, tensile strength, rel. to irrad. effects 3=11170
 Zircaloy-2 and 3, second phase, composition 3=5131
 zircon, Gd³⁺ paramag. resonance 4=15673
 zirconates, dielectric props. 0=13645
 Zirconia, neutron and fission fragment damage 0=2822
 zirconia, stabilized, growth using induction plasma torch 2=2365
 zirconia-urania solid solns., thermodynamic props. 1=14193
 zirconyl perchlorate dihydrate, crystal structure 4=4632
 Zr anodic oxide films, u.v. absorption 0=4412
 Zr-based, ω -phase 1=4062
 Zr borides, carbides and nitrides, elec. props. 1=3707
 Zr carbide, thermal expansion, 26° and -196°K 4=1405

Zirconium compounds—contd

- Zr diboride, evaporation and thermodynamic props. 2=2936
 Zr hydride, bonding, slow neutron scatt. study 2=547
 Zr hydrides, elec. resistivity, 1.2-400°K, optical mode scattering contribution 0=15884
 Zr hydride, neutron thermalization, diffusion 2=18129
 Zr hydride, scattering of neutrons 0=12940
 Zr hydrides, thermal expansion of δ and ϵ phases, by X-ray diff. 0=15817
 Zr oxide anodic films, i.r. spectrum 4=23566
 Zr oxyhalide aq. solns., complex ion structure 0=14627
 Zr solid solns. with Co, Rh and Ir, superconductivity 4=8575
 Zr—Al alloys, structure rel. to gettering props. 4=21200
 ZrAl, crystal structure 2=15047
 ZrAl₂, crystal structure, comp. with Zr₂Al₃ 2=10886
 ZrAl₃, structure 1=5099
 ZrAl₃, alloy growth in Zr—Al interdiffusion 4=28478
 ZrAl₃, hot-hardness 2=2337
 Zr₂Al₃, crystal structure 0=4631
 Zr₅Al₃, crystal structure 0=3223
 Zr—Al—Si, phase study 2=17045
 ZrB₂, anisotropic thermal vibrations 0=13488
 ZrB₂, powder, emissivity 0=16919
 ZrB₂, quadrupole bond, n.m.r. meas. and calc. 3=11121
 ZrBe₃, preparation and structure 0=724
 Zr₂Be₁₇, preparation and structure 0=724
 ZrBi₂ orthorhombic unit cell dimensions 1=20579
 ZrC, electron and ion emission, appl. energy converters 2=17863
 ZrC, lattice constant 0=10315
 ZrC, thermal conductivity, 200°-2000°C 4=20227
 ZrC, thermionic emission, 1300°-1900°K 3=16974
 ZrC, phase transform., ~2200°C, fruitless search 4=17774
 ZrC, phase transform., ~2200°C, fruitless search 4=17775
 ZrC, plastic deformation, effect of temp., strain rate, surface and composition 4=15718
 ZrC, thermal diffusivity meas., 1300°-1650°C 4=6754
 ZrC, work function 2=7637, 22160
 (ZrC)_{0.8}(UC)_{0.2}, anomalous thermionic emission 0=17027
 ZrC and ZrN, expansion, thermal rel. to at. vibr. amplitudes 4=17376
 ZrC and ZrC—UC, thermionic emission 1=11964
 Zr_{0.84}Ca_{0.16}O_{0.84} ceramics, grain boundary conductivity 4=7037
 ZrCl, band spectra 2=3736
 ZrCl₄, exchange with Zr⁹⁷ ions, hot from U fission. 3=21006
 ZrCl₄, i.r. spectrum 1=4936
 ZrCl₄, infrared spectrum 1=11790
 ZrCo₂—ZrFe₂ alloys, structure and mag. props. 3=20880
 ZrD, specific heat 1=11164
 Zr—Dy alloys, h.c.p.—b.c.c. transformation rel. to composition 2=21546
 Zr—Er alloys, h.c.p.—b.c.c. transformation rel. to composition 2=21546
 ZrF₄, infrared spectrum 1=11790
 ZrFe₂, anisotropic mag. h.f.s., Mössbauer meas. 4=22457
 Zr—Fe, Zr₂Fe and Zr₃Fe phases 4=10442
 Zr—H system, precipitation 3=20905
 Zr—H system, thermodynamic functions 4=3989
 Zr—H systems, X-ray structural phase anal. 0=14024
 ZrH, diffusion of H 2=6367
 ZrH, neutron spectra 2=5648
 ZrH_{1.58}, specific heat 1=11164
 ZrH_{1.78}, neutron thermalization, temp. dependence 4=21878
 ZrH₃, lattice dynamics by axisymm. model 3=2711
 ZrH₂, phase transformation, twinning, anelastic phenomena 1=14939
 β —ZrH₂, statistical model 4=20766
 ZrH₂, ZrD₂, heat capacities and thermodynamic functions 1=7538
 ZrH₂, precipitation in Zr, by electron micr. 3=11294
 Zr—H—U alloy, creep props. 2=4329
 Zr—Ho alloys, h.c.p.—b.c.c. transformation rel. to composition 2=21546
 ZrN, current carrier activation energy meas. 4=12906
 ZrN, thermoemissive props. 4=3027
 Zr—Nb alloy, dimensional changes during annealing in temp. gradient 4=20691
 Zr—Nb (15%), ω phase, formation and reversion, electron microscope obs. 4=13507

Zirconium compounds—contd

- Zr—Nb, heat treatment 2=19090
 Zr—Nb, heat treatment, neutron effects on mech. props. 3=1234
 Zr—Nb, paramag. susceptibility, rel. to temp. 3=999
 Zr—Nb, paramagnetic susceptibility 2=4209
 Zr—1% Nb—0.33% Be, structure rel. to n-irrad. 2=23765
 Zr—Nb, superconducting in high mag. fields 3=16879
 Zr—Nd alloys, h.c.p.—b.c.c. transformation rel. to composition 2=21546
 ZrO α (C \rightarrow X) band system 2=14256
 Zr—O cpds., band structure calc. 2=6298
 Zr—O crystal, cohesive energy, Ligand field treatment 4=9807
 Zr—O crystals, energy band structure, theoret. investigation 4=15459
 ZrO, spectral band intensities in M and S stars rel. to temp. 2=994
 ZrO₂, crystal orientation in phase transformations 4=23297
 ZrO₂, crystal structure 0=3225
 ZrO₂, crystal structure of monoclinic form (baddeleyite) 1=10261
 ZrO₂, defect structure rel. to O₂ press. 3=12957
 ZrO₂, diffusionless phase transition meas. 4=13509
 ZrO₂, effect on spectral line intensity of carriers 4=26224
 ZrO₂ films, damage due to irradiation 1=3700
 ZrO₂ films, monoclinic-tetragonal transform. and twinning 4=23298
 ZrO₂ films optical props., 0.2-1.6 μ , rel. to appl. 4=22893
 ZrO₂ films, optical props. and structure 3=8577
 ZrO₂ heated to 1000°C, spectral emittance 4=14443
 ZrO₂, hydrated and anhydrous, X-ray absorpt. spectra 1=17905
 ZrO₂, with MgO and other oxides, elec. cond. 0=4321
 ZrO₂, mixtures with Y, Mg, CaCe oxides, phase change temps. 4=23296
 ZrO₂, molecular vibr. and rot., calc. 4=26233
 ZrO₂, monoclinic-tetragonal transition 3=25654
 ZrO₂ ppt. on grown-in dislocations in MgO 3=10973
 ZrO₂, phase change and recovery, radiation-induced 4=4512
 ZrO₂, phase transform., radiation induced, necessity of impurities 4=17776-7
 ZrO₂, polymorphic transform. under cooling, kinetics 4=29023
 ZrO₂, prepared under high pressure, phase transitions 4=10443
 ZrO₂, Schumann u.v. absorption spectrum 1=17893
 ZrO₂, solid solns., irradiation induced phase transformations 0=21211
 ZrO₂, stabilized, elec. resist. meas. 3=20376
 ZrO₂, tetragonal, crystal structure 3=6845
 ZrO₂, thermal exp., Y stabilized 4=22510
 ZrO₂, U-doped, radiation effects 2=18623
 ZrO₂, vibrational spectra 4=1282
 ZrO₂, work function 0=19707
 ZrO₂—CaO, fluorite phase, X-ray and elec. cond. study 3=25728
 ZrO₂—CaO, phase transform., order—disorder 4=17778
 ZrO₂—CaO solid solution, electrical conductivity ionic 3=8550
 ZrOCl₂, solid and in solution, X-ray absorpt. spectra 1=17905
 (87%)ZrO₂—(13%)La₂O₃, electrical conductivity, 1200°-1650°C 3=17901
 ZrO₂—La₂O₃ system, cond., elec., var. temp., freq., composition 4=25990
 ZrO₂—PbO—TiO₂ system 3=3255
 ZrO₂/Sn,Bi films, semicond. props. 1=1088
 ZrO₂—UO₂—ThO₂ system, structures 0=8229
 ZrF, β — α structure transformation 4=2003
 Zr₃(PO₄)₄, crystal structure 1=2537
 ZrPd₂, structure 1=5099
 Zr—Rh alloys, superconducting transition temp. 3=21669
 Zr—Rh, superconductivity 3=9688
 ZrSiO₄, colour centres, e.s.r. study 2=12466
 ZrSiO₄, zircon, e.s.r. 3=23239
 ZrTe₈, supercond. transition temp 1=11881
 Zr—Th alloys, $\beta \rightarrow \alpha$ phase transformation 4=29024
 Zr—Ti—O long-range ordering 3=3289
 Zr_{1-x}U_xFe₂, hyperfine field 3=15412

Zirconium compounds—contd

- Zr-U-H alloy, transformation kinetics 2=4458
 Zr(V_2Co_{1-x})₂, alloys, crystal structure, atomic, c_{14} laves phase, Co, V distrib. 4=7651
 Zr-Y alloys, h.c.p.-b.c.c. transformation rel. to composition 2=21546
 Zr-Zn system, ξ -phase, structure 1=20546
 ZrZn₂, electrical resistivity 2=2118
 ZrZn₂, ferromagnetic, neutron diff. exam., spin density 4=20552
 Zr-ZrO₂ system, constitution 2=4459

Zodiacal light

- absolute intensity, at 4630, 5280 and 6165 Å 1=4196
 balloon observations (20 July 1963) 4=26956
 brightness, influence of the moon 4=4895
 brightness meas. 4=20915
 cloud models, i.r. appearance rel. to elongation 4=29434
 connection with asteroids and periodic comets 0=18721
 constitution rel. to electron density 4=20916
 continuum, flux ratio, 5577Å-5250Å 2=17178
 dust cloud around earth 2=13117, 17236
 elimination of atmospheric luminescence 2=21660
 false light, rel. to exospheric density 2=4658
 gegenschein, energy distrib. and annual latitude variation 1=1634-5
 gegenschein, spectral distrib., 3900-6500Å 4=13927
 gegenschein, systematic study rel. to earth's dust tail 2=4731
 measurement, and gegenschein, corrected for airglow 4=4897
 measurement and theory of light and counter-glow 3=11529
 night sky light, component separation 2=4660
 observations from high altitude stations 1=12745-8
 optical props., rel. to interplanetary matter models 2=11105
 photoelectric obs. at Tien-Shan 4=2414
 photometric data and interplanetary electron densities 4=7981
 photometric studies, tropospheric scatt. effect 4=10890
 photometry in three colours 1=5146
 polarization, airglow effect, white light versus narrow band obs. 4=4896
 polarization due to dust 2=918
 polarization, light scattering on spherical particles 1=2609
 polarized component, rel. to dust particle diff. 2=9030
 radiation belt, rel. to polar light variations 2=11082
 review 2=15328
 rel. to scattering by dust particles, hypothesis for gegenschein 4=15936
 space density det. 3=7023
 spectrum 0=3414
 spectrum, energy distrib. 2=955
 spectrum, H β absorption line profile, calc. 4=10891
 spectrum, H β line profile and low electron density, blue shift 4=23903
 spectrum, rel. to interplanet. electron density 3=1509
 tropospheric scatt. effect 3=11530
 1957 observation in Egypt 0=18722

Zone melting and refining

- activation energy check, by rezoning, in metals 4=30555
 alkali halides 3=6825
 alkali halides, high-purity crystals 4=13529
 alkali metal cyanides and halides, zone-melting apparatus 4=23324
 alloys, zone levelling technique, optimum procedure 2=8212, 10383
 analogue apparatus 0=18316
 analytical solutions, 2 geometries, levelling process 1=2528
 apparatus using focused electron beam, without a crucible 2=2364
 arc image furnace for floating zone technique 1=2529
 automatic refining apparatus 0=16272
 continuous, apparatus, eqns. describing system 4=11000
 continuous, steady-state equations 4=23318
 continuous, theory 4=20722
 electron beam floating zone melting furnace, modes of operation 4=10999
 electron-beam zone melting, beam deflection cage 4=23323
 by electron bombardment, apparatus 0=4592
 electron bombardment furnace for refractory metals 4=2030

Zone melting and refining—contd

- electron-bombardment furnaces, focussing technique 1=16411
 equalization of impurity conc. along sample 2=10799
 ferroelectric crystal growth from melt 2=14952
 free-convection, effects 4=29058
 in gas phase, theory 1=15002
 glass production, diffusion role 4=26730
 high-melting point metals, deformation-free, using electron beam 4=20677
 hot finger method, modification 4=4538
 imidazole, effect on semiconducting props. 3=10826
 impurity distrib., ultimate, in finite ingot 4=20723
 impurity motion, infinite ingot 3=20802
 impurity movement in finite ingot 3=25674
 impurity var. with cycle number, theory 3=25676
 induction heating, > 2000°C 3=11238
 insulators, technique 2=11229
 length, as length of solid melted, and density ratio solid/liquid 4=10465
 metals, f.c.c., effect on stress/strain curves 4=26495
 migration of liquid zone through solid 3=23408-9
 mixture, eutectic, solute redistrib. calc. 4=27373
 naphthalene segregation coeff. in anthracene, luminescence meas. 4=29057
 naphthalene- β -naphthol and naphthalene-benzoic acid, effect of free convection 4=29058
 organic cpds., automatic zone refiner 3=8809
 organic materials, 3 refiners 0=6329
 peritectic semiconducting compounds 1=5093
 Pfann's distrib. function, applicability 2=19054
 pressure-supported molten zones in horizontal sheets, stability 1=7853
 purification, elec. analogue of impurity distribution 1=1382
 purification factor, theory 1=1381
 pyrolytic coating, for quartz and ceramic vessel, toluene in N₂ 0=21167
 refining theory 1=15000
 refractory metals 4=23322
 review 2=13229
 sealed-solid method, for decomposable cpds. 2=11228
 semiconductors, ultrapurification, conference 4=23319
 sintered carbonyl iron rods, purification 1=10144
 solid-state diffusion effects and use of getter 4=23321
 surface and floating zone melting by glow discharge 2=11633
 technique for simultaneous purification and simple crystal growth 2=16992
 temp. distribution, analogies from liquid drawing of wire 0=12534
 terminal zone cropping 0=8168
 two-component system, math. analysis 3=25675
 vacuum refining, thermal conditions 1=10613
 zone levelled ingots, impurity distrib. 0=10288
 Ag halides 1=4029
 Al 3=23487
 Al, impurity distributions 4=4540
 Al, introduction of preferred orientations 1=10236
 Al, soundness of lattice of recrystallized metal 0=6355
 Al, super-pure 3=20803
 As₂SeTe₂, electrical cond. of vitreous material and crystals 0=15944
 Au, activation analysis 3=3345
 B 0=707
 BaTiO₃ 4=23330
 BaTiO₃-type ferroelectrics 0=709
 Bi-Sb alloys, single-crystal growth 4=23334
 Cd 2=23825
 CdSb single crystals 3=5087
 CoSi, cold hearth method 1=11545
 CoSi₂, cold hearth method 1=11545
 CsI, in study of ionic cond. and luminesc. 2=14508
 Cu, apparatus 0=8170
 Cu, high purity single crystals growth 4=29049
 Cu, polygonization tendency 1=4012
 Cu, residual resistance ratio 2=18632
 Cu, tracers-doped, segreg. directions 4=23336
 Fe, causing stacking faults and twins in thin foils 4=9974
 Fe, damping effects due to directional ordering 0=10167
 Fe, directional ordering effects 1=6447
 Fe, effect of velocity on coercivity 1=2473

Zone melting and refining—contd

GaAs, contamination 3=1274
 GaAs, floating zone refining 4=29054
 GaAs, floating-zone refining apparatus 0=18317
 GaAs growth from Ga 3=23410
 GaAs, horizontal melting 0=8166
 GaP 1=17734
 GaSb-InSb 0=730
 Ge films, single-crystal growth, microzone melting technique 4=2125
 Ge, improved agitation method 2=812
 Ge, single crystals, uniform impurity distrib. 0=13944
 Ge-Al liquid zone, migration through Ge 3=23408-9
 Ge-Si, occurrence of imperfections 2=2363
 HgIn₂Te₄, purification 0=565
 InAs, difficulty of removing S and Se 1=15002
 InP, difficulty of removing S and Se 1=15002
 InSb 0=1669
 InSb, apparatus for casting homogeneous ingots 4=17785
 KBr and KCl 0=8167
 KCN 4=26608
 KCl purification 1=15001
 Li, two-stage refining technique 4=17787
 LiF bicrystals, rel. to grain boundary migration 4=23531
 Mo, production with electron-beam floating-zone melt 4=2030
 Mo, without crucible 2=2364
 NH₄ alum, reagent grade 3=1265
 Pb 3=23487
 Sb₂S₃ 2=8796
 Sb₂Se₃ 2=8796
 Sb₂Se₃, single crystal prep. 0=620
 Se, Sn distrib. 0=13942
 Si, using arc image furnace 1=2529
 Si, effect on dislocations and diode performance 4=29060
 Si, by electron bombardment 0=706
 Si, high-purity crystal growth 0=16268
 Si, horizontal, in non-reactive crucibles 4=29059
 Si, induction vacuum apparatus without quartz 3=25677
 Si, rel. to lifetime and dislocation density 2=23368
 Si, p-type, zone levelling 0=6330
 Si rod floating zone growth, chuck design 1=10241
 Si, shape of melt-crystal interface 2=8793
 Si, single crystals, uniform impurity distrib. 0=13944
 Si, use of electron bombardment 4=15762

Zone melting and refining—contd

Sn, suitability, limitations and technique 4=29061
 Sn, with vacuum heat treatment 0=13962
 Sn-Ag alloys, dilute, Ag distribution 1=7852
 Te, elec. resistance purity test 0=13963
 Te, high-purity, prod. and analysis 3=18684
 ThSe, p-type single crystals, preparation 0=18054
 U, Zr, and Th, purification by arc zone melting 0=8166
 W, analogue simulation 1=10240
 W, effect on tensile props. 3=25617
 W single crystals, room-temp. slip investigation for ~10% plastic deform. 4=30790
 W, without crucible 2=2364
 YFe garnets, crystal growth 1=6499
 Zn 2=23825
 ZnSb, crystal growth 3=8807
 ZnSb crystals, growth technique 1=14991
 Zr, elec. cond. at liq. H and liq. N temp. 0=562

Zoology

animal in satellite, obs. 2=11210
 bats, use of u.s. pulse compression 1=9217
 brine shrimp suspension, u.s. attenuation 1=9449
 bullfrog, retina, spectral sensitivity 1=15383
 cats, 8th nerve action pot. 2=7069
 cats, hearing thresholds 0=6505
 cats, medial superior-olivary-unit response patterns to clicks 4=10972
 cats, physiological nystagmus 0=3384
 eye melanin free radical kinetics, and rel. to O₂ adsorption by semiconductors 4=20875
 fish, acoustic scatter patterns 3=1775
 fish, lateral line mode of action 2=7068
 frogs, electroretinogram, effect of prep. and electrode placement 0=14357
 frogs, standing potential in eye 0=8456
 guinea pigs, bone conduction in ears 0=2046
 hummingbird feathers, iridescent colours 0=16870
 marine animal sounds 2=17576
 mice, blood flow velocity 0=12217
 pigs, inner secretions on acoustic attack 2=4887
 rabbit fundi, photic exposure reactions 4=10978
 rodents, effect of noise stress 0=806-7
 steer, entoptic scatter as function of wavelength 0=8454
 steer eye, entoptic scatter, rel. to human eye 4=30998
